Insurance of the employer's liability to pay compensation is recognized as an essential feature of the system in most of the States. This may be effected through private insurance (stock or mutual companies), self-insurance (proof of solvency, with or without the giving of a bond or other security), or by insurance in State funds, which may be exclusive or competitive. A State fund insurance system exists in 19 of the States listed (The Tennessee fund is limited to coal mining only). Of the 19 States having State fund insurance systems, 7 are exclusive, whereas in 12 the States fund competes with private insurance companies.

No law undertakes to cover all employments. Various exemptions are made, the most important numerically being the exclusion of agriculture and domestic service. Interstate commerce is exempt because it is subject to the exclusive action of Congress, though its law creates liability and does not provide compensation. Laws that apply only to "hazardous" or "extra-hazardous" employments exclude others, thereby distinguished as "non-hazardous". Casual employments are usually exempted, and those not for gain frequently. No law as originally enacted made specific provision for compensating occupational diseases. The dominant idea of accident has given way by degrees, however, until at the present time compensation, either for occupational diseases generally or for designated diseases of this class, is allowed under 17 of the 50 laws analysed.

Most laws require a minimum duration of disability as a condition to the payment of compensation benefits. This does not apply to medical and hospital relief, which is to be provided at once. Two States require no waiting time. Conflicting provisions of the South Dakota statute call for 10 days' waiting time on the one hand, and for compensation from date of injury on certification of disability on the other. In practice the latter provision is said to prevail. In several States the waiting time is compensated for if the disablity continues for a specfied term; or a part may be taken up in each of certain consecutive weeks until all is compensated for.

The Canadian System

The report points out that compensation legislation in Canada had an earlier origin than in the United States, due undoubtedly to the influence of Great Britain. The British Act of 1897, extended in 1900, and replaced by the Act of 1906, is of a type quite distinct from that adopted by any State of the United States. However, it naturally furnished a model for the earlier legislation of the provinces which first took action of this kind.

An analysis of the Canadian laws shows a number of striking characteristics and of deviations from the type of compensation act prevalent in the United States. Some of the more important of these are the following:—

1. In Canada there is a noticeable uniformity among most of the compensation laws. This uniformity applies to the scope of the acts, benefits, injuries covered, administration, and procedure. In the compensation acts of the United States many variations are in evidence.

2. In Canada all the laws are compulsory as to the employers coming within the scope of the act. In the United States only 18, including the United States Civil Employees' Act, are compulsory while 32 are elective.

3. In Canada the scope of the law in each province (Yukon Territory excepted) is limited to enumerated employments, though the lists are quite inclusive. There is some diversity in the number of such employments, but the principal hazardous industries are covered, including manufacturing, mining, construction, and transportation. In the United States only 12 States limit their scope to the so-called hazardous industries, while 38 States cover industries generally.

4. In Canada occupational diseases are compensable in every province except Quebec and Yukon Territory. Such diseases however, are limited to those enumerated in the statutory schedule. In the United States only 17 of the 50 laws include occupational diseases.

5. In Canada all of the provinces except Quebec and Yukon Territory have exclusive State insurance funds. In Ontario, however, employers under schedule 2 (municipalities, railroad, express, telephone, telegraph, and navigation) are permitted self-insurance. In Nova Scotia employers under schedule III

insure fishing industry risks with private companies. In the United States only seven of the 50 compensation laws have exclusive State funds, while 12 have competitive State funds.

6. In Canada probably the most significant characteristic of compensation legislation is the assumption of liability on the part of the province having insurance funds for the solvency of such funds, any temporary deficit being made up from other provincial funds. Under no law of any State of the United States is such liability assumed.

7. In Canada the Workmen's Compensation Boards have exclusive and final jurisdiction over all compensation matters, no appeal to the courts being permitted except in New Brunswick and Nova Scotia. In these two provinces appeal may be had to the Supreme Court upon questions of law, but only with the permission of the judge of said Court. In none of the American States does the administrative commission have final decision, appeals to courts being allowed on questions of law in every jurisdiction, and of fact in some.

8. In Canada members of the Workmen's Compensation Boards hold office during good behaviour, except that in Alberta and in British Columbia the term of office is 10 years. In most of the provinces, however, they are subject to compusory retirement at the age of 75. Each board is authorized to appoints its officers and employees and to fix their salaries. The term of office of such employees is subject to the pleasure of the board. In the United States the term of offic of compensation commissioners is usually 3, 4, or 5 years.

9. As regards liberality, the benefits of the Canadian laws are about on a par with the more liberal of the American acts. The scale of benefits averages perhaps somewhat lower, but the periods for which benefits are paid are as a rule longer. In Canada, except in Yukon, compensation is paid during disability or until the death or remarriage of the widow, while in most of the States the compensation periods terminate at the end of 300, 400 or 500 weeks, though some pay during life. In none of the provinces (Yukon Territory excepted) is the waiting period over one week, and in most of the laws compensation, when payable, begins from the date of the injury, whereas in the United States three States have a waiting period of 10 days, while four have 2 weeks. The early Canadian laws did not provide for medical benefits, but all except that of Yukon Territory have now made provision therefor; in the United States all the laws require medical service.

Average Wages on Railways in United States

A review of railway operations in the United States in 1929, published by the Bureau of Railway Economics (Washington, D.C.) states that the number of employees on railway payrolls averaged 1,687,000 during 1929, compared with 1,680,000 in 1928. This was an increase of 0.4 per cent. The aggregate compensation of these employees was slightly greater than in 1928, the comparative figures being about $2,937,000,000 in 1929 and $2,862,000,000 in 1928. Compensation thus increased 2.6 per cent, compared with an increase of 0.4 per cent in number of employees.

Average compensation per employee has been rising gradually each year since 1924. While this average is affected to some extent by the percentage distribution of the total number of employees among the respective classes, the consistent rise of the past five years has been due primarily to upward adjustments in the wage rates of some of the classes, either locally on individual railway lines or in certain of the territories. The average railway employee received $1,740 in compensation during the year 1929, compared with $1,703 in 1928 and $1,613 in 1924. This was an increase of 2.2 per cent over 1928, and 7.9 per cent over 1924. Had railway employees received the same average annual compensation in 1929 as they earned in 1928, the total payroll of the railways for 1929 would have been approximately $64,000,000 less than it was. In other words, the railway payroll increased by that amount in 1929, due to increased earnings per employee.

The Hon. John Brownlee, premier, and the Hon. R. G. Reid, minister of Municipal Affairs of the province of Alberta, informed the Edmonton City Council early in March that the provincial government intended to propose next year the establishment of a uniform city charter, applicable to all cities in the province, and that this charter would contain provisions in reference to the hours for the closing of stores, employees' weekly half-holidays, and other matters. In view of this announcement the council suspended further action on the question of the weekly half-holiday in the stores of Edmonton.

HEALTH AND MATERNITY INSURANCE

Report of Royal Commission in British Columbia

IN the last issue (page 254) it was noted that British Columbia Royal Commission on State Health Insurance and Maternity Benefits had presented a progress report to the Legislature, the Commission so far being in favour of the establishment of such a system in the Province. The text of the report, since published, gives a full account of the investigation leading to this conclusion. The Commission was composed of the following members of the Provincial Legislature:—Messrs. Cyril Francis Davie, Barrister, of Duncan, Chairman; William Farris Kennedy, of Vernon; Lorris E. Borden, M.D., C.M., of Nelson; George Sharratt Pearson of Nanaimo; and John Joseph Gillis, M.D., C.M., of Merritt.

Scope of Inquiry

The Commissioners had full authority under the Public Inquiries Act to "inquire as to what laws relating to the subjects of maternity benefits and health insurance are in force in other Provinces of Canada or any other countries; to collect facts as to the actual operation of such laws and as to how far they have been found satisfactory; to inquire as to whether and to what extent the public interest requires the introduction of similar laws into the Province of British Columbia; to estimate what would be the total annual cost to the people of the Province in regard to each of these subjects, and what portion of the annual cost would fall upon (*a*) employers of labour, (*b*) prospective beneficiaries, and (*c*) the general taxpayers; to suggest methods by which the annual cost might be collected from the employers, prospective beneficiaries and general taxpayers respectively; and generally to inquire into any or all matters affecting the said subjects respectively."

In the course of their investigations the commissioners collected information specially obtained from other countries having state systems of health insurance, and compiled an extensive digest of existing legislation on this subject. They also initiated the compilation of statistics essential to intelligent consideration of the position of British Columbia in respect of the necessity for some scheme of State health insurance; what form such scheme should take; the entailed costs; and how such costs should be distributed, etc. The collection of such statistics it is stated, is being advanced with all possible rapidity.

Public meetings were held throughout the Province for the purpose of obtaining first-hand information as to present methods, under private enterprise, of protecting the health of workers, and securing them against losses caused by illness and accident. A questionnaire was addressed to representative provincial interests in transportation, industry, and trade and in municipal services with annual payrolls of $75,000 and upwards, the replies thus obtained representing about 65,000 wage earners out of an estimated provincial total of 100,000. The provincial Division of the Canadian Manufacturers' Association co-operated with the Commission in securing replies from its members. At the date of this preliminary report the Commissioners had not been able to hold consultations with representative public bodies, industrial interests, fraternal associations, trade unions, and individuals specially concerned, but this will be done when the statistics now in course of compilation have been completed, the results of these consultations being incorporated in the commission's final report.

Conclusion from Preliminary Inquiry

From the inquiry so far carried out the commissioners reached the following conclusion:—

"Our investigation thus far convinces us that there is justification and a general demand for the introduction in British Columbia of an economically sound and equitable public-health insurance plan, in the interests of the majority of Provincial workers, of Provincial industries, and of the State—in the more effectual safeguarding and preservation of communal health, the more rational distribution of sickness costs, and the scientific reduction of such charges to the Government, to employers, and to individual citizens."

Jurisdiction

One of the first questions investigated by the Commissioners was that of jurisdiction as between the federal and provincial legislatures. Precedents from other countries all suggested that sickness insurance is a national concern. The United States, while it has neither adopted nor considered health insurance as a factor of government policy and concern, some time ago moved federally for the improvement of health conditions for the young in adopting the Shepherd-Towner Act. However, in the United States the efforts of both federal and State authorities and leaders in public thought have rather been concentrated upon measures for the betterment of health conditions gen-

erally, instruction and care of expectant mothers, and reduction of the mortality risk of infants and children up to age 10.

"In the British Dominions," the report proceeds, "Canada excepted, health insurance and associated progressive legislation invariably have been considered and promulgated as national measures. Great Britain's operative Act covers comprehensively and inclusively insurance against sickness, maternity, old age, disablement, and unemployment. So also does legislation of Northern Ireland and of the Irish Free State. A Royal Commission is now investigating the advisability of a compulsory State health-insurance scheme for the affiliated countries in the Union of South Africa. . . .

"In Australia it has at no time been suggested that legislation against sickness and its concomitant losses might be considered as other than a Commonwealth enactment. There has been at no time any proposal of health insurance in or for any of the individual Australian States, which in their relationship to the Commonwealth are in almost the identical position of the Provinces of Canada to the Dominion. Throughout Australia it is held that the provision of sickness insurance—with which there are associated invalidity and unemployment insurance, maternity benefits and old age pensions—is a matter of Federal policy and concern, and such responsibility is accepted by the Commonwealth authority."

"It will be apparent," the report continues, "that all precedents suggest recognition of State health insurance proposals in Canada as a matter for federal consideration and federal action. Why these precedents cannot be accepted and the obligation to consider and deal with any and all proposals for State health insurance and kindred matters of advanced social legislation be passed, with responsibility thereanent, to the Government of Canada, are made evident by the proceedings of the Canadian Parliament's Select Committee on Industrial and International Relations during the sessions of 1928 and 1929, that Committee having been instructed by the Federal House to make inquiries into the related questions of unemployment, sickness and invalidity insurance. While this Federal Committee devoted itself principally to the unemployment insurance element, sickness insurance matters presented themselves during the progress of its inquiry, generally in association with, and incidental to, the unemployment phase of the reference. Considerable attention was also given to suggestions as to family allowances in Canada, these proposals having indirect relationship to maternity benefits."

The commissioners cite a memorandum presented to the Select Standing Committee on Industrial and International Relations on April 19, 1928, by President Tom Moore, of the Trades and Labour Congress of Canada, setting forth that: "The Trades and Labour Congress of Canada holds the view that all social legislation of the nature now being dealt with should be of Federal character, as otherwise many workers are denied the benefits of same because of the difficulty of establishing the requisite provincial residence qualifications, etc., owing to the transitory nature of their employment."

"At the same time," it is pointed out, "the Government of Canada, on the advice of its Department of Justice, rigidly insists that jurisdiction exists exclusively with and in the provinces, although the Dominion admittedly has power to make money grants to the provinces or any of them, and thus become a sharer of costs in the event of the State being made a contributor to sickness or invalidity insurance costs, in addition to employers and employee-beneficiaries.. . . . .

"The entire attitude of the Dominion to the subject of health insurance, as exemplified during the proceedings of the Select Committee, is that while, practically and morally, health-insurance legislation should be national, action thereto is estopped by the mandatory terms of the British North America Act, placing jurisdiction with the Provinces in all matters of health and kindred subjects.

"The adoption of the Report of this Federal Committee and the attitude of the Dominion Government during its sessions may be fairly condensed in the conclusion that while a system of State Health insurance should properly be national, the provisions of constitutional law are such that action bringing such insurance laws into effect must be Provincial; but the Dominion, accepting its moral obligation, will consider assistance by grants ratified by Parliament, as in the case of through highway construction, technical education, and old age pensions contributions.

"It is therefore apparent that it is quite within the constitutional power of British Columbia or any other of the provinces of Canada, to proceed in the establishment of a State health-insurance plan, as British Columbia led the way in the creation of old age pensions; and that the Dominion is morally committed, by its concurrence in the report of the Select Standing Committee on Industrial and International Relations, to sympathetically consider the granting of financial assistance in the operation of such State health-insurance system.

"Furthermore, as indicating the attitude of the Dominion authority, Hon. Mr. Heenan, Minister of Labour, informed the Committee that 'The Dominion should wait for the provinces to take the initiative'—as British Columbia is now doing.

"The Dominion Committee found its inquiries considerably handicapped by inability to secure authoritative data on the extent and costs of sickness in Canada, the non-presentation of any concrete plan upon which actuaries could be instructed to prepare statistical information, and the infrequency of census compilations as a means of securing comprehensive information. And although Parliament on May 1, 1929, adopted the Report of its Select Standing Committee, recommending 'that with regard to sickness insurance, the Department of Pensions and National Health be requested to initiate a comprehensive survey of the field of public health, with special reference to a national health program,' this recommendation being accepted by the Government, provision for such a survey has not yet been made and the assumption is permissible that action awaits the course adopted by this and other provinces in inter-related policies."

Legislation in Other Countries

This section of the report sketches the provisions of sickness insurance legislation in other countries, the law of each country being discussed with a view to conditions prevailing in Canada. "It has become almost everywhere accepted that, to be effective, such insurance must be compulsory, the improvident, careless citizen, against whose necessities it is most essential to provide, habitually neglecting opportunity to protect himself against possible sickness losses, and remaining, as before voluntary insurance laws existed, a prospective recipient of public aid if overtaken by misfortune. In other words, the voluntary sickness-insurance plan has now become generally accepted throughout Europe as impotent to achieve desired results, and those countries which previously had expressed antagonism to the compulsion principle, one by one have come or are coming to adopt it. Conspicuous among such countries is France, which originally had set its face against compulsion in a measure influenced possibly by national sentiment antagonistic to theory and legislation of German origin. The successful working of the German system observed in the recovered provinces of Alsace and Lorraine, as contrasted with the admitted ineffectiveness of the previously obtaining French voluntary plan, explains in part the national change of front."

Prevention of Sickness

After reviewing the insurance laws of other countries the commissioners observe that "there is to be noted throughout the civilized world a marked change of late in the attitude of leaders of public thought (both within and outside the medical profession) as to the necessity of revising health services and devoting primary attention to keeping the people well rather than curing those ills to which flesh is heir. Sir Arbuthnot Lane, the eminent London physician, urges that the medical profession must revolutionize and reorganize its principles and its policy with recognition of this objective. Economists and industrialists are becoming seized of the necessity of checking the enormous wastage in costs of sickness preventable by such system as will assure closer and more continuous observation of the units of the industrial population, through which incipient disaffections may be detected and successfully treated at the outset, with prolongation of the working span of life and increase of comfort and effectiveness. This is peculiarly a function of public-health insurance machinery, and claims are advanced in Europe that the operation of compulsory health insurance, with associated health-preservation education and propaganda, already have lengthened the normal life of industrial activity by years."

Elsewhere in the report it is pointed out that "the thought that restoration of the patient to health is desirable rather than the mere payment of compensation for time-loss has resulted in the provision of medical aid, medicines, etc., and in all the more recent laws, treatment by specialists and convalescent care. In the majority of the compulsory insurance countries the costs of these benefits-in-kind is now quite as high as the sum of cash allowances, in some cases even greater. Sickness insurance also is being extended to cover workers' families, such service being provided in the majority of the compulsory-insurance systems. As a result, tens of millions of workers' households in European countries are now entitled to free medical treatment in all or in its principal phases, and compulsory sickness insurance has thus become a major means of carrying forward a consistent health-protection program for the masses of the population. In apportioning contributions to the cost of sickness insurance, it is more difficult to arrive at an equitable division than in the case of workmen's compensation for accidents, where the employers' responsibility is more clearly definable. In view of the fact that the worker, the employer, and the State are each in a degree concerned in the preservation of the health of the industrial class, and all thus have interest in the success of insurance, costs are met in six continental European countries by these three groups in varying proportion."

In summing up the tendencies revealed by a study of the operation of compulsory-insurance systems in Europe, the International Labour Bureau says:—

"Sickness insurance is endeavouring to fulfil ever more completely its task of protecting

the health of the working-class family and maintaining the workers' capacity to produce by widening the circle of insured persons; perfecting the system of benefits which perform the threefold function of relief, cure, and prevention; concentrating the means of action, and systematically organizing autonomous institutions under the control of the parties concerned. Thus compulsory sickness insurance, as a creator of security, health, well-being, and stimulative productive capacity, and also as an instrument of education, is an element both important and necessary in the proper economic and social organization of modern communities."

The Provincial Situation

Under this heading the Commissioners review the provisions existing in the province for protection against the risk of sickness and the state of public opinion regarding a state scheme. "Although statistics are unfortunately incomplete and far from up-to-date, sufficient data are nevertheless available to establish the fact that private insurance with commercial companies against sickness losses is carried by only a minor fraction of the wage-earning and low-income community. Membership in fraternal societies including relief during illness among their benefits also is confined to a small minority; and such societies, while carrying on important and useful services, reach, after all, comparatively few of the population and prescribe such conditions of membership that an even smaller part are eligible therefor. At the same time the financial ability of a number of such societies to provide their guaranteed benefits under present scale assessments is questionable, should abnormal demands be made upon their funds through epidemic or other exceptional pressure. Moreover, the costs of insurance with commercial companies against loss by illness are necessarily higher than they would be under a generally applied system, since such companies look naturally for a business profit, not operation on a mere cost basis, and their comparative spread of insurance is distinctly limited.

"As to the societies, it is found that years ago the Fraternal Societies' Welfare Association—including the Canadian Order of Foresters, Loyal Orange Order, Loyal Order of Moose, Chosen Friends, Independent Order of Odd Fellows, Order of the Rechabites, Sons of England, and Benevolent and Protective Order of Elks—endorsed the objects of a compulsory health-insurance plan properly administered, under which plan it is quite possible that they might continue to function as insurer agents of the State, with Government supervision and guarantee of their solvency, as in certain European countries, such security for members being missing in this Province under present loose conditions.

"There remain for attention the facilities of protection afforded by a considerable and growing number of privately conceived and established welfare and benefit associations for employees of major industrial, transportation, commercial, and, public-service institutions, which associations are accomplishing much good, but with costs of their protective services necessarily higher than if such services were standardized and of universal application. At the time the gross inequity intrudes that where an employing interest has become a voluntary sharer in welfare association costs, it is penalized to the extent thereof in competition with others in its line of activity whose employees are not so organized and protected, or by their own contributions exclusively provide monetary compensation for time-loss through illness or, alternatively, furnish medical care, medicine, hospitalization, etc.

"The favourable attitude of the general public of British Columbia toward State health-insurance proposals has been time and again attested in representations by public-service and social-welfare organizations, by provincial labour bodies, and by students of health-protection science. During late years the demand for a public-health insurance plan, on the part of the prospective beneficiary class, has manifestly crystallized; and the Union of British Columbia Municipalities has within the year gone on record as strongly favouring careful study of the situation with such innovation in view. And of municipal corporations of the Province answering a Commission questionnaire in this connection, 77 per cent desired the introduction of compulsory insurance; two confessed to lack of information upon which to base a considered opinion; and one offered no comment. None replied negatively.....

Approved Societies

"Objections to the institution of a State health-insurance scheme that tentatively and preliminarily have been voiced by corporations having smoothly functioning employees' welfare organizations, which they and their employees desire to continue to operate and control, as well as objections that may reasonably be looked for from fraternal and kindred societies fearing possible extinction through alienation of their benefits features, would seem possibly to be easily met by acceptance, with adaptation to Provincial conditions, of the policies of certain of the older

countries in this regard, making the societies recognized insurance carriers; or of a principle already successfully applied under Workmen's Compensation practice—employers' associations functioning as approved societies upon satisfying reasonable conditions as to provincial supervision in the interest of the insured, assured financial stability, and the provision of benefits equal to those guaranteed under state system.

"Still further it should be borne in mind that in any plan that may be devised for the preservation of the family health as well as that of its breadwinners, the ratio of cost in this Province will naturally be somewhat lower than in European countries, where the family average (exclusive of parents) is 3·34, whereas in British Columbia it is established by the last census figures at 1·43—the smallest in Canada.

Existing Industrial Schemes

"Analysis of the detailed information up to date elicited as to policies voluntarily initiated in major British Columbia undertakings—industrial, commercial, transportation, etc.—for safeguarding the health of employees and otherwise promoting their welfare, will be found peculiarly instructive. The questionnaire was addressed to approximately 350 firms and corporations, etc., comprehensively representing all principal employers of Labour in British Columbia. Two hundred and ten replies were received by the Commission; and later, through the Canadian Manufacturers' Association, summary reports were made by others, bringing the complete response up to virtually 100 per cent of the original address-list. In the 210 enterprises reporting to the Commission direct in first instance, approximately 64,989 workers are employed; and in 82 of these 210 undertakings protection services are in operation, widely various in their coverages and with costs ranging from one-third of 1 per cent to 3·5 per cent of pay-roll—some of such services being paid for entirely by the employers—in others exclusively by contributions of the employees; generally by graduated co-operation between masters and men. In twenty-eight instances medical services are furnished for the families of employees as well as for the employees themselves, the cost of such services to the workers ranging variously from $1 to $4.30 per man per month, married men as a rule paying from 50 to 75 per cent more than bachelor employees, for the coverage extended to their dependents."

NATIONAL HEALTH INSURANCE AND CONTRIBUTORY PENSIONS IN ENGLAND AND WALES

THE tenth annual report of the Ministry of Health of England and Wales, relating to the 12 months' period ending March 31, 1929, describes the work carried on by the Department under the main heads of Public Health, Local Government and Finance, administration of the Poor Law, and administration of National Health Insurance and Contributory Pensions.

It contains separate sections dealing respectively with England and Wales. The following figures relate to England only.

Widows', Orphans', and Old Age Contributory Pensions Scheme.—The period under review was the first full year during which payment of pensions under the Widows', Orphans' and Old Age Contributory Pensions Act, 1925, had been in complete operation. Widows' and orphans' pensions began on January 4, 1926; unrestricted non-contributory old age pensions for insured persons who reached the age of 70 before January 2, 1928, began on July 2, 1926; and contributory old age pensions at the age of 65 began on January 2, 1928.

The number of widows benefiting under the Act in England on March 31, 1929, was 138,183, grants being made to widows also in respect to 93,526 children. Grants were made also to 3,82 orphans. These numbers do not include belated claims in respect to eligible persons who had died before the Act became fully operative, the beneficiaries in this class including 62,109 widows and 119,379 children. Payments for widows' pensions (including allowances for children) during the year amounted to £7,205,500 and payments to orphans to £235,500.

Contributory Old Age Pensions between ages 65 and 70.—The total number of old age pensioners between the ages of 65 and 70 in payment on March 31, 1929, was 455,271. The amount paid during the twelve months' period being £11,482,000.

Old Age Pensions at Age of 70.—At March 31, 1929, the total number of old age pensions in payment to persons in England over 70 years of age by virtue of the Contributory Pensions Act was 287,377. During the period covered by the report the Ministry took over

from the Board of Customs and Excise the administration of all pensions payable under the Old Age Pensions Acts, 1908-1924, to persons over 70 years of age who had established their title by virtue of the Contributory Pensions Act. The number of pensioners concerned at the time the transfer of administration took place was approximately 195,000. On March 31, 1929, the number of persons in England to or in respect of whom pensions under or by virtue of the Contributory Pensions Act were being paid had reached a total of 1,159,667, comprising 200,292 widows, 216,727 children (including orphans) 455,271 persons between the ages of 65 and 70, and 287,377 persons over the age of 70.

Health Insurance

National Health Insurance in Great Britain had its origin in the National Insurance Act of 1911, the scheme coming into operation in July, 1912. National Health Insurance in Great Britain is on a compulsory and contributory basis. The persons who are required to be insured are, subject to certain exceptions, all those between the ages of 16 and 70 who are employed under a contract of service in manual labour, or in non-manual employment at a rate of remuneration not exceeding £250 a year.

The cost of the scheme is shared between the insured persons, their employers and the National Exchequer. The revenue is derived, in the first instance, from weekly contributions paid partly by the workers and partly by their employers by means of health insurance stamps affixed to contribution cards, the rates of contribution in 1925 being 10d. a week in the case of men, of which 5d. was payable by the employer and 5d. by the worker; and 9d. in the case of women, of which 5d. was payable by the employer and 4d. by the worker. As from January 4, 1926, these rates were reduced to 9d. a week in the case of men (employer 4½d., worker 4½d.) and 8½d. a week in the case of women (employer 4½d. and worker 4d.) consequent upon the modifications in the benefits of the scheme which follow from the provision of pensions at 65 under the recent Widows', Orphans' and Old Age Contributory Pensions Act.

The benefits provided under the scheme are as follows:—

(1) Medical benefit, i.e., medical treatment and attendance, including the provision of proper and sufficient medicines and of the prescribed medical and surgical appliances.

(2) Sickness benefit, i.e., periodical payments during incapacity for work through illness. The ordinary rates of sickness benefit are 15s. a week for men, and 12s. a week for women, commencing on the fourth day of incapacity and continuing for a maximum period of 26 weeks.

(3) Disablement benefit, i.e., a continuance of periodical payments during illness at the reduced rate of 7s. 6d. a week for both men and women after the title to sickness benefit has been exhausted.

(4) Maternity benefit, i.e., payment of the sum of £2 on the confinement of an insured woman or the wife of an insured man. (A total sum of £4 is payable in the case of a married woman who is or has recently been herself an employed contributor; these cases represent 25 per cent of the whole number of payments to married women.)

(5) Additional benefits, which may be provided by an Approved Society having a disposal surplus on valuation, and may take the form either of an increase of the normal cash benefits, or payment towards the cost of various forms of treatment, such as dental, ophthalmic, hospital or convalescent home treatment.

National Health Insurance Act, 1928.—The National Health Insurance Act, 1928, which was based mainly on the recommendations of the Majority Report of the Royal Commission on National Health Insurance, received Royal Assent on July 2, 1928, and was brought into operation on January 1, 1929. In addition to making many improvements of detail in the scheme of National Health Insurance, the Act makes provision for the period of continuance of insurance after cessation of employment in such a way as to safeguard to the fullest possible extent the title of insured persons both to Health Insurance benefits and also under the scheme of Widows', Orphans' and Old Age Contributory Pensions. Provision is also made whereby insured persons will be relieved from any penalties, in the form of reduction or suspension of benefits, by reason of arrears of contributions during periods of proved genuine unemployment. The Act also provides for the setting up of a special Insurance Section of the Deposit Contributors' Fund through which any deposit contributor who is able to prove that he cannot obtain admission to an Approved Society by reason of ill-health will in future receive all the normal benefits of the Health Insurance scheme instead of being restricted as hitherto to such benefits as could be provided out of the sum standing to his own individual credit.

The approximate number of persons entitled to National Health and Pensions insurance benefits at December 31, 1928, was as follows:

	England		Wales	
	Men	Women	Men	Women
Contributors for pension benefits	9,273,000	4,791,000	681,000	179,800
Contributors for health benefits	9,072,000	4,726,000	679,600	178,400

The report contains a statement of cash receipts and payments under the National Health Insurance Act for the calendar year 1928, showing that for England the receipts amounted to £30,726,674 and the payments to £30,606,645; and for Wales receipts were £1,999,956 and payments £1,983,454.

ACCIDENT PREVENTION AND INDUSTRY

Address delivered by Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations, Toronto, Canada, before the Midwest Safety Conference at Chicago, Illinois, March 18, 1930

YOU have given me as my subject "Accident Prevention and Industry," and I have taken the liberty of elaborating this; in fact, my theme is going to be "Example and Control." The example must come from the executive of the industry and the control likewise is his problem. We know that men follow examples that are set by leaders. The possibility of control of accidents and injuries in industry has been demonstrated too many times to admit of negative argument. I think it may be reasonably accepted as true that when active safety work has failed, this has been the result of inadequate consideration in advance, failure to apply accepted principles of the work, or faulty administration of plan.

Ontario's Act.—May I be permitted, before we launch into the general question of controlling accidental injuries, to discuss workmen's compensation briefly. We all know that at the outset compensation was looked upon by the average employer with a good deal of misgiving, but we do not, to-day, find any enlightened executive seriously considering even a suggestion of return to the pre-compensation days. That is to say, workmen's compensation has become part of the social structure in most civilized communities, and I say this with all due deference to those States that are still lingering on the brink before making the plunge.

Our Workmen's Compensation Act in Ontario has been in effect since the first of January, 1915. The act was the result of a report by the late Chief Justice, Sir William Ralph Meredith, who had made a careful study of Workmen's Compensation in United States, in England, and in Germany. The Ontario Act has proven a model for all other acts in Canada, with the exception of the Province of Quebec, and is, I believe, the most generous in any jurisdiction under compensation. This has been accomplished without unreasonably burdening the industry and has made for prompt and certain payment to the injured worker.

The Ontario Act provides a payment of 66⅔ per cent of the average earnings up to a maximum wage of $2,000 for all injuries involving a loss of seven days time or more. Pensions are granted for all cases where the disability is in excess of ten per cent, and those pensions are not limited by a certain number of weeks, but are granted for life. In the case of widows, there is an allowance of $40 a month for life, or until re-marriage, in which event, a sum equal to two years' payment is awarded. There is an allowance of $10 a month for each dependent child until that child reaches the age of 16. This latter allowance is stepped up to $15 for each child where there is no mother to undertake the duties of bringing up the child. In addition to all of this, our medical and hospital services are absolutely unlimited. The Ontario Act and most of the Acts in Canada are state funds with industries separated into classes, each class being in effect a mutual insurance unit and paying its own costs.

You will see, therefore, the broad, underlying policy of our Workmen's Compensation Act is that the class of industry in which the disability occurs must finance the total cost. This places the responsibility where it should be, and this is why industry must safeguard its employees. I have often said in public in Canada that industry has one relief from increasing compensation costs—that is accident

prevention—so again we are brought back to my theme of "example and control." Industry must finance workmen's compensation and, by the same rule, industry must safeguard its employees to operate economically.

An Executive Problem.—The first step in injury control is the education of the executives of a plant to a proper appreciation of the problem. Following this, is the creation of a desire for safety throughout the organization on both financial and humanitarian grounds. Do not think that I am trying to load executives, who are already overburdened with a considerable amount of work, with something that should be done by another member of the organization. I do not suggest that it is necessary for an executive to know all of the details of accident prevention work in the plant any more than it is necessary for him to know all the details of everything being done by the working force; that is an impossibility, but the executive must plan and must give his wholehearted support to the work.

Organized Accident Prevention.—Under the Workmen's Compensation Act of our province, industry is authorized to set up accident prevention associations and the Workmen's Compensation Board is authorized to pay the expenses of operating those associations. Section 114 gives this authority and was put in on the suggestion of industry when the Act was being drafted. There are 24 classes of industry in Schedule 1, 19 of those classes have taken advantage of Section 114 and 16 out of the 19 have federated in the Industrial Accident Prevention Associations. We have a group of trained inspectors, who operate under the guidance of our chief inspector, Mr. V. L. Mummery. These men go into industry with specific knowledge of the general class experience and detailed information of the individual plant accident experience for the past three years. Our field force first make contact with the plant executive, and discuss the general situation with him. The next step is plant inspection followed by a final review with the plant executive so that the whole situation as to requirements may be fully understood. Safety meetings for foremen, supervisors and employees are part of their regular work, but no meeting is held unless we have, in advance, knowledge of managerial interest and we seldom hold a general plant meeting without previous meeting of supervisory force. The second phase of our activity is our propaganda service. Safety bulletins are issued every month to about eight thousand industries throughout the province. In addition to bulletins, we put out pay envelope inserts, special leaflets of various kinds, cards and, once a year, the Safety Calendar.

The Industrial Accident Prevention Associations also receive from the Workmen's Compensation Board what are known as "accident memos." These give a brief report on every claim for compensation made by an injured worker, and when I tell you that this is coupled with certain information as to money cost, you will realize that the organization is put in possession of a mass of very valuable information that serves as a finger-post for our guidance in the matter of injury control. As there is a seperate card kept for every plant on our list, we are able to determine whether accident frequency is running high, and with the new system that we have on money cost, we know whether a firm is dipping too heavily into the class funds.

The chairman of the Workmen's Compensation Board has said that the experience of the classes organized for accident prevention has been better than that of the unorganized classes. The result is entirely reasonable and if it were not so, there would be no object in spending a large sum of money each year on operating accident prevention associations.

I rather flatter myself that, standing as we do with certain Old Country traditions on the one hand and in proximity to your country on the other, we are trying for the best from each. I think it is generally admitted safeguarding of machinery in England has progressed considerably beyond the average, due largely to the work of the factory inspection branch of the government. You in the United States have taken a lead on the matter of propaganda and have developed the idea of safety literature beyond what has been done in other countries. We have been fortunate in being able to draw on the best of both.

As I said, compensation came into effect in Ontario in January, 1915, so that at the close of 1929 we had fifteen full years under compensation. The cost of the average case reported to the Workmen's Compensation Board in those fifteen years was $97.40 and the cost of the average case in 1929 was $91.98. This calculation is made by dividing the total number of accidents reported to the Workmen's Compensation Board into the total awards made either for the fifteen years or for the year 1929.

We have a statement from the Chairman of the Workmen's Compensation Board that approximately 1 per cent of the accidents reported to the Board are death cases and that these involve nearly 25 per cent of the total cost of compensation; that about 4 per cent of the accidents reported are permanent disabilities and involve nearly 50 per cent of the cost of compensation—which, of course, means that about 5 per cent of the number of accidents reported are responsible for nearly 75 per cent of the total cost. My reason for bringing out

this particular item is that the trend in death cases and in permanent disabilities per hundred full year workers in Ontario is downward while the trend in minor acicdents and medical aid only cases, is upward.

We have, I am glad to say, an increasing number of industries in Ontario that are producing definite results in this matter of accident control, industries where accidents are being reduced and production increased; in fact, I have reached the point where in talking to an executive, I should prefer to drop the words "safety" and "accident prevention" from my vocabulary and talk the effective operation of his plant to him.

Details of Safety Work.—Mr. Morley concluded by enumerating the following fundamentals in safety work:—

1. Issue a general statement to all workers on the subject of accident prevention over the written signature of the chief operating official.

2. Call a meeting or meetings of employees in company time for the purpose of telling them the story, which is that there are too many accidents happening and their co-operation is needed.

3. Bring out your carefully prepared book of rules and see that these are understood and stick to those rules, because rules were not made to be broken.

4. Establish safety committees and see that they work.

5. Provide First Aid facilities and insist on their use.

6. Post safety bulletins properly at strategic points throughout the plant and change these periodically and use pay envelopes printed with safety slogans or pay envelopes with inserts.

7. Hold periodic meetings, with or without motion pictures.

8. Last, but by no means least, insist on and keep up adequate supervision and employee training throughout the entire organization.

CANADIAN NATIONAL SAFETY LEAGUE

Report on the Work of the National and Provincial Leagues in 1929

THE eleventh annual report of the Canadian National Safety League reviews the activities of the main organization and its provincial affiliates during the year 1929. In the general and constant safety campaign that is maintained throughout the Dominion the central body acts as a co-ordinating agency for the following provincial safety leagues: The Ontario Safety League, the Province of Quebec Safety League, the Maritime Safety League, the British Columbia Safety League, and The Manitoba Safety League. The national organization expresses its grateful acknowledgement for the annual grant of $10,000 from the Dominion Government. Educational safety literature was distributed to all parts of the Dominion largely with the willing help of the provincial affiliates and of the general passenger tourist agents of the Canadian National Railways and the Canadian Pacific Railway Company; the provincial and district foresters and fire rangers; summer hotels; guides; fire and police chiefs; Chambers of Commerce, and Boards of Trade.

A general campaign of safety was carried on in those Provinces not yet thoroughly organized for safety work, by the distribution of safety bulletins and other literature to industrial plants, business houses, public officials, premiers, mayors, fire chiefs, police chiefs, public libraries, etc. In this work, cities and towns in the Province of Saskatchewan, Alberta, Manitoba and the Yukon were reached and the literature distributed as follows:—13,000 industrial bulletins, 29,950 special bulletins, 13,500 traffic bulletins, 18,500 school bulletins, 6,000 sundry circulars and reports. In addition, special campers' bulletins, printed on weatherproof cardboard, dealing with the hazards of camp fires, canoeing, bathing and swimming, and conveying warnings of the risks of forest fires, were distributed throughout Canada. Bulletins on various safety topics were also supplied to the British Columbia and Maritimes Safety Leagues. Some 23,000 copies of the 1929 safety calendar were printed, and 21,400 copies were sold while 600 copies were mailed to a free list of public officials and 500 copies were supplied to the British Columbia and Maritimes Safety Leagues. All electric railways in Canada receive a safety bulletin service, much of which is supplied from the national organization, and those in organized provinces from their local safety league. The Canadian National Safety League is an active member of the Canadian Electric Railway Association, which is conducting an intensive safety campaign among their electric railway members.

Ontario Safety League.—The sixteenth annual report of the Ontario Safety League describes "work well done, co-operation received, and results obtained." In view of the

increased hazards in practically all walks of life, the report considers that "the safety message must have been far-reaching to have kept accidents so well within bounds." Sincere thanks are expressed for the co-operation and financial support received from various governmental departments, municipalities, organizations, and individuals. School safety work again played an important part in campaign activities during 1929. A careful study was made of the hazards causing the greatest accident frequency, and these were especially emphasized in an effort to reduce fatalities and lessen accidents to a minimum. The message of safety was carried to the schools by means of safety bulletins and illustrated lectures, with the co-operation of school boards, principals, teachers and chief constables. This work was begun early in January and continued until the closing of schools for the summer holidays, and resumed in September. During the year safety was taught to 179,000 children in 418 different schools in 79 cities, towns and villages. In addition, school safety patrols were organized in many centres, and the usual school children's essay contests and drawing competitions on safety subjects were conducted. An important factor in this phase of the safety educational campaign was the "Letter to Parents," conveying warnings on home hazards. This letter had a distribution of 200,000 copies.

The year's program was featured by an intensive industrial safety campaign as well as by a highway safety campaign. The industrial work included a fortnightly bulletin and pictorial service in about 75 industrial centres. The motoring hazard was likewise emphasized in a traffic bulletin campaign, the circulation of these amounting to 4,000. By permission of Hon. George S. Henry, Minister of Highways, 550,000 safety cards to motorists were enclosed with the 1930 licences. The Safe Drivers' Club was also vigilant in reporting traffic violations and reckless driving. The report on fatalities and lesser accidents for the year 1929 indicated that the province had a total of 1,850 fatal accidents from all causes as compared with 1,823 in 1928. Deaths caused by automotive vehicles head the list with 576 fatalities, as compared with 477 in 1928. Drownings again are second with 321 fatalities, as compared with 382 deaths from this hazard in the previous year. There were 12,485 non-fatal accidents in Ontario during 1929, and 10,757 in 1928. In 1929, the fatalities per 1,000 automotive vehicles was 0·6; in 1928, it was 0·7; in 1927 it was 0·8. The worst year was 1913, when the fatality ratio was 6·0 per 1,000.

British Columbia Safety League.—The annual report of the British Columbia Safety League shows that 70 fewer persons met accidental death in 1929 than in 1928. These reductions are classified as follows: 8 less in fatal traffic accidents; 50 less in fatal general public accidents; and 27 less in fatal industrial accidents. "Home" accidents alone of the general classes showed an increase, there being 15 more in this group during 1929 than in 1928.

The warning poster service, inaugurated in 1927, was continued throughout 1929, the distribution being concentrated where it would be most effective.

Early in the year the directors decided that greater traffic safety in the province generally, and in the city of Vancouver particularly, should be the special objective of the League, and accordingly there was a concentration of effort on this feature. The report observes that "it is indeed significant that despite a tremendous increase in the number of motor car licences issued in 1929, there were four less motor vehicle accident deaths, in that year than in 1928." A statement of comparative accident casualties in the province indicates that in the industrial group there were 207 fatal accidents in 1929 as compared with 234 in 1928. The total of non-fatal industrial accidents in 1929 was 19,045 as compared with 16,672 in 1928.

Province of Quebec Safety League.—The sixth annual report of the Quebec Safety League deals with the activities of that body under its three chief spheres of operation—legislation, organization, and education. The outstanding legislation enacted during the year was the "compulsory stop" law at unprotected railroad crossings—a statute largely the result of the Leagues' effective propaganda. Although only in force since July 1, 1929, the record of railway crossing accidents for the last six months of that year showed a decrease of thirty-three fatalities.

In the field of organization several new committees were formed. From the Industrial Section there developed the Construction, First Aid and Industrial Hygiene Committees, each of which made a valuable contribution towards safety results. Other units actively participating in the safety movement were the Aviation Safety Committee, Commercial Vehicle Chauffeurs' Club and the Junior Radio Safety Club, with over 16,000 members.

Educational efforts along safety lines were largely directed by utilization of the press and radio broadcasting. The press of the province gave to the League advertising value to the extent of $20,000 while radio talks

were made possible through the courtesy of Station CFCF. The distribution of thousands of circulars and bulletins, especially in regard to safety traffic, was made possible through the co-operation of parish priests and town officials.

Manitoba Safety League.—The report of Manitoba Safety League shows that there were eighty-one fatal accidents and 13,340 non-fatal accidents in industry during the year 1929. The League again successfully conducted first-aid classes in conjunction with the Workmen's Compensation Board, as well as a campaign in accident prevention, by means of a newly organized bulletin service, safety calendars, and press publicity.

Maritime Safety League.—The fifth annual report of the Maritimes Safety League emphasizes the school, traffic, and industrial features of the activities during 1929. Some 19,700 safety bulletins were issued to schools throughout New Brunswick, Nova Scotia and Prince Edward Island. A compilation of the number of fatalities and lesser accidents in the Maritime provinces during 1929 indicates that in New Brunswick there were 118 fatal and 367 non-fatal accidents; in Nova Scotia, 211 fatal and 717 non-fatal accidents; in Prince Edward Island 19 fatal and 50 non-fatal accidents. In each province, both in fatal and non-fatal cases, the statistics revealed that motor vehicles were the cause of the greatest number of accidents.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Education in Manitoba

THE recommendations of the special committee on Workmen's Compensation appointed last year by the Manitoba Legislature were noted in the February issue (page 110). The report was presented to the Legislature on February 28, together with a draft bill embodying the changes proposed by the committee. It contained the following paragraph in reference to the value of education in safe practices:—

"Your Committee was impressed with the educational campaign which is being carried on by the Provincial Bureau of Labour and the safety devices and system of safety education now in operation in certain large industries. The value of the effort made in this direction has produced very beneficial results and many accidents have undoubtedly been avoided in the industries which have adopted these safety measures. It is regrettable to note, however, that fatal accidents, which numbered only 24 in 1924, have increased to 85 in 1929, and that total industrial accidents in the same period have increased from 9,015 in 1924 to 13,340 in 1929, and it becomes more apparent that the efforts of the Bureau of Labour, the employers and employees must be directed particularly to the adoption of greater safety methods for the prevention of accidents. Co-operation along this particular line can be made most effective by employers creating within their establishments a safety program and making some officer or foreman responsible for the carrying out of such program. Your committee is convinced that if this were done many accidents would be avoided with the consequent very great saving to industry and workmen and the families of deceased workmen.

"Your Committee is further of the opinion that every effort should be made to encourage the adoption of an educational safety program amongst the children attending the schools of the Province".

Quebec First Aid Centre

The Industrial Section of the province of Quebec Safety League has been granted authority to organize, under its auspices, a local centre of the St. John Ambulance Association under the official name of the province of Quebec Safety League Centre. This will enable the association to offer direct instructional courses in first-aid to employees of industrial concerns at extremely reasonable fees. Classes may be organized in either the French or English languages.

The First Aid Committee is composed as follows: President, S. C. Holland, vice-president and general manager, The Robert Mitchell Co. Limited; vice-president John F. Smith, manager, Parke Davis Company; chairman, J. L. Vallee, superintendent, the Sherwin-Williams Company of Canada Limited; treasurer, J. V. Desaulniers, vice-president and managing director, Société Nationale de Fiducie, Inc.; hon. secretary, Frank E. Lincoln, secretary, Central Safety Committee, Steel Company of Canada, Limited.

The Executive Committee is as follows: A. G. Beck, superintendent, Canada Cement Co. Limited; R. N. Cornish, secretary, The Canadian Casuality Underwriters Association Ltd.; R. W. Gould, secretary, Canadian Manufacturers' Association; L. H. Pinsonnault,

president, Montreal Ship Lining Co.; E. C. Ryan, superintendent, National Breweries Garages; P. St. Pierre, chemist, J. J. Joubert Limitée.

New Organization for Pacific Paper Industry

The first meeting of the Western Division of the Pulp and Paper Section of the National Safety Council was held at Powell River, British Columbia during February. Mr. R. H. Scanlon, of Powell River, was appointed regional director, and an organization committee composed of members of British Columbia, Washington and Oregon firms was appointed. Conferences of the new organization are to be held at least twice a year in different mills in the coast region.

Mr. Scanlon, in his closing address, said that accidents in the Powell River mill mainly resulted from five main causes: (1) Infection from cuts, comprising 12 per cent of accidents; (2) Slipping, which was responsible for nearly 15 per cent; (3) Pickaroons, causing nearly 10 per cent of all casualties in the plant; (4) 10 per cent from fingers being caught between rolls and drums; (5) Miscellaneous..

The "danger hours" he had discovered, lay between the hours of 10-12 in the morning and between 3-5 in the afternoon. "We should not only watch the danger hours, but we should watch the causes. I recommend that our firm study these things carefully and recommend that the visiting delegates make a similar study in their own plants".

Methods in Investigating Accidents

The Province of Quebec Safety League recently published Leaflet No. 25 in its series of bulletins dealing with various aspects of safety work in industry. The new leaflet describes the proper methods to be followed in investigating industrial accidents, as follows:—

"We recommend the following mode of procedure which has given results to some leading European and American concerns and which will often give a better insight into the nature of accidents than the more formal modes of procedure.

"When an accident happens, the doctor or first aid man or the foreman should, as soon as possible, notify the management or the person in charge of safety in the plant. In the case of serious injuries, this person will make a thorough investigation of the accident, filling out a form which should be available in every responsible firm and which should cover every possible angle of the case. This investigation is rather informal, the injured, the witnesses and the foreman are questioned privately, the scene of the accident and the machinery are inspected without ceremony and at different times after work and the usual routine have been resumed.

"In addition to this investigation, a committee should be appointed to go into the investigation in a more formal way, if the accident is a major one. In this case, the persons implicated are questioned formally and with certain solemnity. The scene of the accident and the machinery may be viewed with due ceremony. This more formal investigation should furnish material for future safety propaganda, and should contribute to impress on the workmen the great importance that the management attaches to safety and accident prevention.

"The reports of both formal and informal investigations should be filed with the safety man who should study them carefully and shape his conduct, his reforms (if necessary) and his propaganda accordingly.

"In the case of minor accidents, the investigation needs not be as elaborate and generally a brief statement of the case is sufficient. But a record should be kept of even minor accidents. It is the practice of many companies to require a report on every injury which receives first-aid treatment—regardless of its severity—so that the Safety Engineer may be fully advised on all the hazards of his plant.

"In most accidents, there are from two or three to ten or twelve different causes. These may be mechanical. They may arise from the conditions or circumstances of the work, the poor lighting, congestion of workmen at certain points, bad floors, etc. Almost always there is a mental element; faulty supervision untrained workmen, fatigue, perhaps resulting from prolonged hours or from unhygienic working conditions.

"In order to be able to introduce into the reports these complex elements, it is most important to obtain different viewpoints. It is often wise to study and think over certain assertions of workmen which often at first may seem childish or not to the point.

"One of the greatest temptations of accident investigators is to accept the easiest explanation that points to an easy correction. Real safety men should not yield to this temptation. Even in cases where it seems that the complex elements that have brought about the accident cannot be entirely remedied, these elements should nevertheless be emphasized in the reports and the attention of the management drawn to the problem presented.

"The results of the investigation should always be made public, even while the situa-

tion revealed cannot be entirely corrected. It has been found by some of the largest plants, especially in the United States, that it always pays to let the workmen know the truth, to confide to them the danger of certain situations and to rely on their co-operation to avoid similar accidents in the future. The most pitiless publicity should be given to accidents.

"The policy of imposing penalties upon men who may be found responsible partially or entirely for accidents should not of course be adopted without careful consideration. Many industries have established systems according to which penalties are carefully listed and meted out to the men who violate safety rules. The results of their systems have been good. The fear of the penalty certainly has a good psychological effect."

Accident Prevention Course at New York University

A call for "men with qualities of leadership to equip themselves for executive positions in the safety movement" issued jointly by New York University, the American Museum of Safety and the National Society for the Prevention of Blindness, was noted in the January issue of *Safety Engineering*. Ten free scholarships to the University's course in accident prevention have been made available by Arthur Williams, president of the Museum of Safety. A scholarship is to be given to the person designated by each of the following organizations: Merchants' Association of New York; New York State Chamber of Commerce; Brooklyn Chamber of Commerce; Queens Chamber of Commerce; Bronx Board of Trade; Industrial Education Department of the Y.M.C.A., Manhattan; New York City Continuation Schools; New York City Realty Board; American Federation of Labour, New York City Office; General Contractors' Association of America.

"Mr. Williams' decision to finance the training of ten men for service in accident prevention was influenced by the fact that—despite the excellent accomplishment of many cities and industries—the toll of accidents has steadily increased. At the Safety Congress held in Chicago a few days ago, it was revealed that 97,000 persons were killed by accident in the United States during the last year—the greatest total of such casualties in the history of the country. At the same time the records of the New York Sate Department of Labour show that during the first seven months of this year in the metropolitan district alone 10,000 more accidents were reported than during the corresponding period of last year. This is characteristic of the situation in industry and in public life throughout the country. It is the belief of close students of this problem that the major cause of the present situation is the lack of leaders in this new profession. New York University has therefore, decided to make its course for the training of public and industrial safety directors available to any interested man or woman showing qualities of leadership, irrespective of previous academic education.

"The course will be given in the evenings at the Washington Square Branch of the University. The course will be conducted in co-operation with the Museum of Safety and the ten industrial and commercial associations which have been asked to designate scholarship students. The instruction will include a minimum of theory and a maximum of practical data growing out of the experience of the industries and communities that have been most successful in the reduction of accidents. Students of the course will be taken through the plants of members of the Museum of Safety and the various industrial associations where they may observe at first hand the technique of accident prevention".

The Textile Industries of Canada, 1927

The Industrial Statistics Branch of the Dominion Bureau of Statistics has recently published a report on the textile manufacturing industries of Canada for the year 1927. Included in the group are the various industries which employ at some stage in manufacture a common process of spinning and weaving and use common raw materials, the fibrous quality of the materials used (cotton, wool and silk, natural and artificial) being the primary ground for the combination of these industries into a single group. Subdivision within the group is on the basis of the material used—cotton, wool, silk linen; in addition are various manufactures based on textiles as raw materials.

In the general survey of the textile industries it is pointed out that the year 1927 was a record year in physical production. The value of production increased more than four per cent over that of 1926. There was an increase in the number of persons employed and a slight increase in the average rate of wages paid over that of the preceding year. Summary tables for all manufacturing industries were published in the Labour Gazette, October, 1929, pages 1182-1188, these including the principal statistics of the textile industry in Canada by groups and sub-groups, for the years 1926-27.

INDUSTRIAL RELATIONS IN A RETAIL STORE

A STUDY of the system of "industrial relations" existing in the apparel store of William Filene Sons' Company of Boston, Massachusetts, one of the first firms in the United States to experiment with employees' participation in management, has been published by the Russell Sage Foundation (New York) as the fourth volume in its Industrial Relations series. The first three volumes were studies of employees' welfare systems existing in coal mining, steel making and the bleaching of textiles. The new volume deals with a firm engaged in distribution. The writer of the present volume is Miss Mary La Dame, of the Department of Industrial Studies of the Foundation.

William Filene established his store at Boston in 1881, after a lengthy experience in retailing in other cities. The store, now carried on by his sons and their associates, is stated to be the largest single store of its kind in existence, employing about 3,000 workers, of whom 70 per cent are women.

The Filene store, it is stated, has developed its human relations as an integral part of its business aims and methods of management. "Making colleagues rather than antagonists of one's associates" is the method followed by the founders in furthering the success of their business. From its beginnings in 1881 its owners recognized that success largely depended on their employees, and the structure of the corporation and the organization of the store were determined with this idea in mind. Provision was made for proper methods of recruiting and selecting workers and training them. Attention was given to the establishment of satisfactory conditions of work, including a definite minimum wage and reasonable hours. Employees' participation in management took form in the institution of the Filene Co-operative Association. In an Arbitration Board power was given the Association to govern discharges and transfer of employees or to deal with any other dispute. The Association also had the right to nominate four members of the company's Board of Directors, 11 in number."

An outline of the company's "philosophy of industrial relations" is given as follows:—

Three specifications are included in the business aims of the store; permanency, profit and service.

Out of this threefold business aim emerged a threefold personnel program; employee participation in management, in profits and possibly in ownership. The business was to be owned by those who managed it and not by absentee capitalists interested only in the returns on their investment. This principle of owner-management was an integral part of the policy affecting employees. It also was a determining factor in financial policy.

The purposes of the Filene Co-operation Association, mentioned above, are (1) to give its members a voice in their government; (2) to increase their efficiency; (3) to add to their social opportunities and (4) to sustain a just and equitable relation between employer and employee. It may initiate new store rules or modify or cancel existing ones having to do with "store discipline, working conditions or relations or any other matters except policies of the business," and its vote in such matters is effective unless vetoed within a specified time by the president of the company, the general manager or any other member of the management; this veto can be overridden by a three-fourths vote of the employees. In the Arbitration Board the Association has final judicial power over grievances or disputes, including specifically discharge which the employee feels to be unjust and wishes to appeal.

Employees who belong to the few trade unions represented in a store of this kind are also members of the Filene Co-operative Association, and their unions are recognized by the company.

The policy of the store is to encourage employees through the Co-operative Association to ascertain their own needs and in co-operation with the company to provide facilities for meeting them. The actual management of these facilities then rests with the Association. Even the clinic is now jointly managed by the Benefit Society of the Filene Co-operative Association and the management, though until 1926 it was part of the Personnel Division of the store organization. Thus the employees, through their own organization, manage provisions for sick benefits, medical examinations, savings and loans, restaurants, clubs, and classes for instruction, besides publishing a weekly bulletin and maintaining a band, an orchestra and a choral club which gave public performances of a very creditable kind.

Discussing the advantages and disadvantages of the Arbitration Board, the writer points out that its members are largely made up of the rank and file of employees. It has admittedly corrected injustices and brought to light important problems of personnel relations. It has produced good-will and it has disclosed defects in the administra-

tion of the store and its rules. On the other hand, it is distinctly favourable to employees and it is open to the objection of creating difficulties for executives, whose leadership in their own departments may sometimes be jeopardized through one-sided decisions by the Arbitration Board.

The company originally followed a general plan of profit sharing and distribution of bonuses, but this has been superseded by a system of distribution of bonuses by the Operating Committee, with review by the management. The following summary of the results obtained by the Filene system is taken from a synopsis of the contents of the book.

The threefold aim of the business, permanency, profit and service to customers in its accepted sense, seems to have been fulfilled to an unusual degree. Toward the large aim of constantly decreasing the difference between the cost of production and the cost to the consumer, which should be regarded as a part of "service to customers," the store has made little or no contribution except in its automatic bargain basement. The methods of building up the co-operation of employees, through participation in management, through participation in profits and through ultimate participation in ownership, have one by one been abandoned or seriously limited in practice. Nevertheless the experience of this store certainly demonstrates the desirability of giving attention to the selection, the training and the good-will of employees. Had the firm persisted in its further objectives of sharing management, profits and ownership, a demonstration of great value in human relations might have been made. That experiment still waits to be made in some large store; and when it is undertaken, the experience, the successes and the failures of this Boston store will have much to offer for practical guidance.

Co-operation in Soviet Russia

The *Review of International Co-operation,* the official organ of the International Co-operative Alliance, gives in its March issue an account of the present structure and organization of the co-operative movement in the Union of Soviet Socialist Republics, contributed by the Centrosoyus, Moscow. The development of this movement is divided into three stages: the first covers the period of the civil war and intervention (1917-1921); the second stage covers the period of the restoration of the entire national economy, when the Soviet co-operative movement adopted the principle of voluntary membership (1921-1924); the third stage covers the period of socialist reconstruction which is proceeding at the present time, and during which the co-operative movement has rapidly developed, having become one of the principal factors of the socialist constructive work.

At the beginning of 1921, with the conclusion of the civil war, the Soviet government passed over from war communism to the New Economic Policy. Free trade was restored in the country. The consumers' co-operative movement was then confronted with the task of replacing the private trade which developed in connection with the New Economic Policy, and becoming the principal distributive apparatus in the country. From 1921 to 1924 both forms of trade, private and co-operative, developed side by side. Beginning with 1925, the private trader has been gradually driven out of the market. The rôle of private trade has been steadily declining while that of the consumers' co-operative movement, which has been squeezing out the private dealer, has been steadily growing in importance.

The structure of the Soviet co-operative movement in the village is different from that in the city. In 1926 the co-operative system for the village consisted of the following bodies: (1) Centrosoyus; (2) Territorial unions; (3) a system of district unions; (4) the primary rural societies. The functions of the unions were not strictly defined. Some of the primary societies were affiliated directly to the territorial unions, while some of the district unions were members of the Centrosoyus itself rather than of the regional unions.

In the middle of 1929 a new territorial division was adopted in the Soviet Union. About the same time the new co-operative division based upon four grades had also been completed. At the present time the organizational structure of the consumers' co-operative movement of the U.S.S.R. appears as follows: The village and town consumers' societies organize the membership and supply their needs as consumers, and their cultural requirements. The consumers' societies are members of the district unions, which are in turn affiliated with the territorial unions. The Centrosoyus of the U.S.S.R. embraces all the co-operative centres of the allied Republics. Thus is created a complete and systematic structure of organization in the consumers' co-operative movement in the U.S.S.R. "It is necessary to emphasize the fundamental difference between the unions of the Soviet and western co-oper-

atives. In the U.S.S.R. the central co-operative organization, the Centrosoyus, is simultaneously a Central Union, and a Co-operative Wholesale Society."

In the field of trade the work of the Centrosoyus consists essentially of preparing plans for the supply of the co-operative system with goods of the state, handicraft, and its own industries, as well as plans for the distribution and movement of goods within this system, of co-ordinating these plans with the proper government bodies, participating in the preparation of the industrial production programs as the representative of the organized consumers, concluding with the industrial and commercial organizations contracts, including general contracts, for the supply of goods to the consumers' societies, as well as agreements on the manner in which such goods are to be supplied.

The Centrosoyus also organizes the purchase of farm products, and raw materials through the system of consumers' co-operatives, and supplies these products to the consumers' co-operatives, especially to the workers' and town societies. The Centrosoyus supplies practically all the goods, with the exception of those requiring special sorting in the warehouses, directly from the producers to the consumers' societies.

FEDERATION OF CATHOLIC WORKERS PRESENTS LEGISLATIVE PROGRAM TO QUEBEC GOVERNMENT

A DELEGATION representing the Federation of Catholic Workers of Canada, prior to the meeting of the legislature of the Province of Quebec, presented to the provincial government a memorandum of proposed legislation, based on the resolutions that were adopted at the annual convention of the Federation at Chicoutimi last July (Labour Gazette, August, 1929, page 894). The delegates were as follows: Messrs. Pierre Beaulé, general president of the Federation; O. Filion, vice-president, Montreal; F. Laroche, general secretary; Thomas Poulin, assistant secretary; Gerard Tremblay, director, Montreal; P. Guay, director, Three Rivers; Eugene Tremblay, director, Chicoutimi; Rev. Max. Fortin, general chaplain; Rev. Eug. Delisle, chaplain; Emile Verret, business agent of the Building Trades of Quebec; Louis Morin, president of the Central Council of Catholic Unions of Quebec; P. Guérard, secretary, and Maurice Turgeon, assistant secretary, of the Central Council of Catholic Unions of Quebec; A. Lepage, secretary of the Building Council of the National Catholic Unions of Quebec; A. E. Lortie, secretary of the Protective Union of Leather Cutters of Quebec; J. Bernard, president of the Protectivce Union of Leather Cutters of Quebec, and P. Gosselin, Fair Wage Officer.

The Hon. L. A. Taschereau, prime minister, supported by other members of the provincial cabinet, received the delegates, promising consideration of the suggestions that were submitted. The proposals of the Federation were as follows:—

1. Adoption by the Department of Health of more effective measures to prevent the risks of poisoning incurred by workers making use of paint-spraying machines.

2. Adoption of the eight-hour working day in the baking industry, with the abolition of Sunday labour, and regulation of night work.

3. Enactment of a minimum wage law for day labourers, this class of worker being the least protected, the lowest paid, and the most exposed to the loss of employment. Such legislation, it was pointed out, is in effect in British Columbia, and under consideration in other provinces.

4. Amendment of the Women's Minimum Wage Act to include commercial workers.

5. Amendment of the electrical inspection regulations to permit of temporary installations made for the purpose of religious or national celebrations, thus avoiding the expense of inspections in such work.

6. That a certificate of competence should be required from persons installing oil furnaces.

7. Appointment of a commission, composed of lawyers, sociologists and labour representatives, to draw up a Labour Code for the province; such a compilation being necessary owing to the ambiguity of the Civil Code in matters relating to the contract of labour.

8. Amendment of the Professional Syndicates Act to permit of the incorporation of federations of labour unions.

9. Abolition of private employment agencies, and provision that the government agencies supply labour only when union rates are paid.

10. Amendment of the Sunday Observance Act to enforce Sunday closing on all merchants and manufacturers of any nationality.

11. Publication in French of the National Electrical Code.

12. Establishment of courses of sociology in schools, colleges, and universities, so as to

counteract revolutionary activities in this direction.

13. Establishment of an economic council for the province.

14. Enactment by the province of an Old Age Pensions Act.

15. Enactment of a Workmen's Compensation Act in accordance with the expressed views of labour in the province.

16. Appointment of a commission to investigate social insurance.

17. Amendment of the Industrial Establishments Act in the interest of industrial safety, so as to require the factory inspector to visit each establishment at least once a year.

18. Provision of the means of compulsory arbitration of disputes involving municipal fire-fighters and police officers.

19. Adoption of the double-shift system for fire fighters in towns of 30,000 population or over.

20. Restriction of the manufacture of die presses, so that one type of press only be made, the risk resulting to the workers from the use of various types of machine being avoided.

21. Reimbursement by the government of the expenses incurred by trade unions in placing their members in employment.

22. Adoption of the eight-hour working day as a means of reducing unemployment during the slack season in the building industry.

23. Investigation for the purpose of finding a means for solving the constitutional difficulties in the way of the adoption of the International Labour Conference Conventions.

24. Publication in French of trade manuals for wood-workers, etc.

25. Establishment of a provincial accident prevention bureau.

26. Enactment of regulations providing for the proper ventilation of tunnels and excavations, or for the obligatory use of gas masks.

27. A provision requiring contractors to keep an exact register of all their employees so that their identity may be known in cases of accidents.

Use of Overtime for Women Workers in New York

The Industrial Bulletin of the New York State Department of Labour gave in its issue for January the results of a study of the legal regulation of overtime work of women in factories and mercantile establishments made by the Bureau of Women and Industry in the fall of 1929. The study includes an analysis of overtime schedules sent in by 190 plants, 132 factories and 58 mercantile establishments, during the first 9 months of the calendar year of 1929. These plants employed approximately 10,000 women.

The overtime schedules of 121 of these plants showed a more or less definite purpose in the use of overtime, while the remaining 69 appeared to use if only occasionally, and are therefore, not discussed in the Bulletin.

Factories, to a much greater extent than stores, bore out the claim that overtime is necessary for seasonal peaks and emergencies. Sixty-seven per cent of the factories, but only 17 per cent of the stores, used overtime during their busy seasons or in emergencies. However, it must be kept in mind that the busiest season for mercantile establishments the week preceding Christmas, is exempt from all restrictions on working hours and therefore stores do not have to use any of their 78 hours of yearly overtime during this rush period.

Eighty-three per cent of the stores and 33 per cent of the factories made a practice of using overtime freely to lengthen working hours. The bureau found that overtime was used (*a*) during busy seasons by 46 factories and 7 stores, (*b*) in emergencies by 3 factories and 1 store, (*c*) to increase working hours by 24 factories and 40 stores. Of this last group 13 factories and all 40 stores used overtime to increase their working hours in order to use the maximum permitted by law; 7 factories in order to operate on a 5-day week and 4 factories in order to operate steadily on long hours, "staggering" employees.

A large variety of industries was represented by the 46 factories which worked overtime during their busy seasons. Factories making women's and men's clothing predominated with 26 plants, the food industry was next with six, textiles had five plants, shoes had two, metals two, furniture two, and sails, bakelite specialities, and the laundry industry each were represented by one plant.

A large number of firms used overtime regularly to increase their working hours. This was done in three ways:—

1. Thirteen factories and 40 stores definitely planned to increase their working hours regularly by the use of overtime. Following are the various ways in which the overtime was distributed in the factories: One-quarter of an hour or 18 minutes daily for 5 days of the week; one-half hour, one hour, or one hour and a half on one day of each week; one hour

on one day and a half hour on another day of each week; four and a half hours on the short day of each week until the overtime limit was reached for each individual woman.

It is the custom in the stores to use overtime on Saturdays throughout the year. All the 40 stores working overtime regularly used it on Saturday, 31 using one hour and a half, two using one hour, one, an hour and a quarter, one, 50 minutes, four, 30 minutes, and one, a quarter of an hour. Four of the stores which used overtime on Saturday used it on other days of the week as well, two working a half hour overtime each Friday, one a quarter hour daily, and the fourth using a half hour each Monday and a quarter hour each Tuesday and Friday.

2. Seven factories planned to use their overtime so that the plants could be operated on a five-day week. One plant operated on a five-day basis for the entire year, working overtime for one-half hour on three days of each week. The other six plants ran on a five-day week for only part of the year, usually during the summer months. These plants either worked one hour or one-half hour overtime daily, for five days a week.

3. Four factories ran at long daily hours continually, and arranged to do so by "staggering" the women in various ways. Two plants worked overtime every day of the year, but a careful overtime record was kept and no one woman permitted to work more than her 78 hours of yearly overtime. One plant starts the women on a 48-hour weekly schedule, working one hour overtime daily, five days a week. Each woman does not work overtime every week, but when she has used her 78 hours of overtime she is placed on an "alternate" schedule of 49½ hours. By distributing the overtime among their employees, the firm is able to work longer hours all year round.

In an industrial State as large as New York, the Bureau of Women and Industry points out, it is hardly justifiable from a study of only 121 establishments to say whether or not the demand for overtime is actually based on seasonal or emergency grounds. The fact remains, however, that of the 121 plants employing around 10,000 women, 57 worked overtime during their busy season or in emergencies, while 64 firms spread their overtime regularly throughout the year in order to operate their plants on a longer daily or weekly basis.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Vocational Guidance in Vancouver

Desirability of the Vancouver School Board undertaking vocational guidance work on a larger scale than at present and under supervision of a competent director, was emphasized at a recent largely attended meeting of the school trustees, representatives of the service clubs, junior high and high school principals, social service organizations and other bodies. The speakers were unanimous that vocational guidance work should receive more specialized attention than at present, although not so much unanimity of opinion was expressed as to the method of working out the plan. The discussion covered a wide range, much being heard of unemployment, the necessity of British Columbia developing her raw materials to provide manufactories in which employment could be offered, methods of giving vocational guidance, necessity of industrial surveys, and other subjects allied with vocational work. Mr. J. S. Gordon, superintendent of city schools, stated that the time had now arrived for the school system to make another forward step in the establishment of a vocational guidance department. Vocational training, he said, is chiefly the work of the teachers under a competent director.

Vocational Education in United States

The thirteenth annual report of the United States Federal Board for Vocational Education, recently received, indicates the scope of the board's activities during the fiscal year ending June 30, 1929. The report covers the work of the board in the administration of the original Vocational Education (Smith-Hughes) Act of 1917, as amended, the Act extending the benefits of the Smith-Hughes Act to the Territory of Hawaii; and the administration of the Vocational Rehabilitation Act.

Maximum expenditures by the States of Federal money made available under the Vocational Education Act each year are specifically determined in the provisions of the Act, and range by stated yearly increases from a total of $1,655,586 in 1917-18 to a maximum of $7,154,901 in 1925-26 and annually thereafter.

The report states that for the most part plans for vocational education are officially approved by the board for five-year periods. Amendments to plans are, however, submitted by State boards from time to time as may be necessary in order to provide for particular situations. Such amendments are approved by the Federal board when they are in harmony with the provisions of the Vocational Education Act and the policies of the board.

According to the report, the State plans now in effect show a decided improvement over earlier plans. Standards for the organization and efficient operation of vocational schools and classes are more clearly defined than ever before. The qualifications specified for vocational teachers and supervisors are more appropriate than in the past, and the improved standards for teacher training indicate consistent improvement in that important phase of the program. These conditions all tend toward the better safeguarding of Federal funds allotted to the States under the various acts, with increased assurance that the money will be used for the purposes specified by Congress.

The report indicates that there is an increasing demand for published material in the form of analyses and suggestions as to how efficient training courses may be conducted and improved methods of instruction followed in all types of vocational training. The policy of the board regarding publications is to meet, so far as possible, the existing needs as evidenced by requests received from the States or directly by the board from other sources. At the present time a number of important studies are under way in all of the fields of vocational education for which the board is responsible, and practically without exception these studies have been instituted as a result of specific requests from the States, national business and industrial organizations interested in vocational training and other departments of the Government. Certain studies which appear to be necessary because of the knowledge which the Federal board has of general conditions prevailing in different fields of vocational education have also been made, and others are now under way.

The Prison Labour Problem

The advisory committee on Prison Industries in the United States recently issued a report on prison industries (U.S. Department of Commerce—Bureau of Foreign and Domestic Commerce). The Committee reached the following conclusions from a study of existing conditions.

1. Certain of the major factors in the normal cost of production which must be met by all manufacturers are entirely absent in the case of prison industries. If anything approaching normal efficiencies of operation can be attained with the use of prison facilities and labour, the total costs of production are obviously below those of the manufacturer who must meet large overhead expenses as well as employ free labour.

2. It is the universal belief that prisoners should be usefully occupied, whether as a part of their punishment or as a means of rehabilitation by teaching them habits of industry.

3. The volume of goods produced by prison labour is already very large in some lines, but as more prisoners are put to work and as the industries become more efficient the output of our prisons will be greatly increased.

4. The effect of placing on the open market a volume of goods which have been produced below normal costs is to lower prices and disorganize the market. While at any time this practice tends to bring about unfair competitive price conditions, the effect is more keenly felt when there is overproduction.

5. The solution of this problem, if prison production is to continue—and all agree that it should—would seem to be the elimination, in one way or another, of the direct price competition of the prison products with so-called "free" products. Only two methods have been proposed for the elimination of such direct price competition. First, by identifying the prison products so that prices quoted on them would not directly affect market prices generally on similar goods. Second, by removing prison products entirely from the open markets.

6. Foreign countries, as well as the United States, have experienced difficulties in enforcing the identification of prison products, if they pass into commerce through private hands.

Prison Labour in Canada

The Committee makes the following statement regarding prison labour in Canada:—

According to the Canadian labour laws governing prison labour (Revised Statutes, Chap. 147, Section 62, sec. 3), "convicts may be employed in labour under the control of the Crown; but no labour shall be let out to any company or person." Since under this law prison products are not permitted to compete with those of industrial concerns, supplies for Government departments are made by the convicts whenever possible, and when this demand is too light they are employed in making equipment for the prisons, such as uniforms, and shoes for themselves and the officers. Hence, the marking of prison products has not been considered necessary.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Action in New Zealand on International Labour Conference Decisions

Industrial and Labour Information, the weekly publication of the International Labour Office, in its issue of March 17, contains the text of a lengthy communication from the Prime Minister of New Zealand to the International Labour Office indicating the legislation existing in the Dominion of New Zealand on the subjects which have been dealt with in the Conventions and Recommendations adopted at the various sessions of the International Labour Conference.

Publications of the Office

International Survey of Legal Decisions on Labour Law, 1928

The International Labour Office has recently published the fourth volume of the International Survey of Legal Decisions on Labour Law. From 1920 onwards the International Labour Office has published in its Legislative Series the labour legislation adopted in the different countries. But mere knowledge of the clauses of a law gives no adequate idea of its actual effects, and the wish has repeatedly been expressed that information might also be published concerning the application of these laws by the competent authorities, and particularly by the courts which deal with industrial matters. To meet this wish the International Labour Office has, since 1926, supplemented the Legislative Series by an "International Survey of Legal Decisions on Labour Law." The Survey cannot cover the legal decisions of all countries, but must be limited to those countries which, in fact, represent the most important legal systems. It was accordingly limited from its first appearance to the legal decisions of England, France, Germany and Italy. The third volume was the first to include those of the United States. The subsequent inclusion of other countries is also being planned. Another limitation lay in the selection of legal decisions. Reference was made to those concerning questions of legal principle which might facilitate the development of labour legislation in other countries and which are thus of international importance. The majority are concerned with legal questions which are more or less frequently raised in all countries alike. Others, such as those relating to the legal position of foreign workers, are of direct importance for the settlement of international legal questions. The decisions and opinions of international courts on questions of labour law, and particularly of the Permanent Court of International Justice at The Hague, were included so far as these were available.

The reports for the separate countries are grouped under the following headings: (1) General principles of labour law; (2) Right of association; (3) Participation of workmen in the management of the works (works councils); (4) Individual contracts; (5) Collective agreements; (6) Salaries and wages; (7) Hours of work; (8) Labour disputes; (9) Procedure in labour cases; (10) Protection and special rights of specified occupational groups; (11) Protection of women, young persons and children, and men disabled in war; (12) Placing and unemployment; (13) Inspection of Labour; (14) Social insurance; (15) Miscellaneous.

Owing to delay in the completion of the survey of legal decisions on labour law issued by the United States Bureau of Labor Statistics, it was impossible to complete the preparation of the material from this source for this volume of the *"International Survey"* in time for inclusion in the volume itself. The American contribution will, therefore, be published in a supplemental volume, which will appear as soon as possible after the principal volume.

The present volume includes numerous decisions of international importance. As regards Germany attention is particularly called to the fundamental decisions relating to the capacity of the so-called "yellow" and Communist trade unions to be parties to a collective agreement, the question of the nature of work on the belt conveyor system (piece or time work), and the recently much-discussed question of who bears the risk of lost time in case of interruption of work.

Protection of Workers operating Metal-Working Presses

The third of a series of studies that the Safety Sub-Committee of the Correspondence Committee on Industrial Hygiene attached to the International Labour Office has decided to publish on accident prevention problems has just been issued under the title "Protection of Workers operating Metal-Working Presses." The examples and suggestions for the practical solution of specific problems in connection with metal-working presses which are contained in the above-mentioned monograph, should prove of value to factory inspectors, employers and others occupied daily in accident prevention work.

Co-operative Organizations

Under the title "Co-operative Organizations," the International Labour Office has just published Part VI of the "International Labour Directory." This volume consists of a first part containing a Directory of Organizations and a second part containing Supplementary Figures. Part I enumerates in the first place the international organizations and then for each country the federal organizations, comprising the various classes of co-operative societies or representing the different tendencies of the movement. Part II is reserved for the presentation in the form of tables of supplementary figures relating to the various activities of the central organizations directly or indirectly affiliated to the International Co-operative Alliance, and of the majority of the other organizations enumerated in the first part.

Bibliography of Unemployment

The International Labour Office has just published a second edition of its Bibliography of Unemployment, covering the period 1920-1929. The first edition of this work appeared in 1926, and covered the period from 1914. The classification adopted in the present edition is the same as in the previous edition, and is as follows: (1) General literature. (2) Special problems: the trade cycle and monetary questions, seasonal unemployment, unemployment among women; juvenile unemployment; unemployment in agriculture, unemployment in docks and harbours; unemployment among seamen; unemployment among non-manual and professional workers (3) Creation and expansion of employment. (4) Employment exchanges including vocational guidance, training of the unemployed, and emigration and immigration). (5) Unemployment insurance and relief.

International Labour Review

The March 1930 number of the *International Labour Review* contains the following special articles:

Injunctions in labour disputes in the United States, by Dr. Edwin E. Witte; Employers' additional unemployment benefit schemes in Great Britain, by Mary B. Gilson (Industrial Relations Counselors, Inc., New York) and E. J. Riches (Research Division, International Labour Office).

In the section devoted to Reports and Enquiries are the following:

The family allowance System: a survey of Recent Developments.

An enquiry into conditions of agriculture and rural economy in India.

Conditions of labour and methods of recruiting in Malaya.

Occupation and Health

It is announced in the issue of "Industrial and Labour Information" of March 17 that the first volume of "Occupation and Health", the encyclopaedic work relating to industrial hygiene which was undertaken by the International Labour Office in conformity with a decision of the International Labour Conference, is now approaching completion. This work, which has been published in parts during the last few years and will finally appear in two volumes, summarizes the results of a systematic and laborious study of available knowledge on the health hazards of industrial life, covering practically every important industry, process or ingredient involving risk of illness or injury to the worker. Concise information is given as to materials used, processes employed, chemical or biological causes of disease, sources of poisoning or infection, statistics, symptoms, diagnosis, prevention, legislation and bibliography.

Medical Survey of Mines in Manitoba

Dr. E. W. Montgomery, Minister of Health and Public Welfare, presented to the Manitoba legislature on March 6 a report showing the results of a medical survey of mines in central Manitoba. He stated that 156 men employed at three mines had been examined and that of these some 126 had been found to be normal in every respect. Fifteen showed symptoms of mild bronchitis, but there was nothing significant about those cases. While there were three cases of doubtfully active tuberculosis, the same percentage he pointed out, might have been found in the same number of men examined anywhere. There was only one case of silicosis, and the man affected had been employed elsewhere for fifteen years underground. Arrangements were being made, he said, for surveys in the Flin Flon and Sherritt-Gordon areas, but there seemed to be less probability there than there is in the central Manitoba district of developing silicosis among miners.

In reply to a question by Mr. John Queen, Labour leader in the legislature, as to the best thing that should be done in the case of miners proved to be tubercular, Dr. Montgomery said they should be advised to seek employment of a different character, as they were likely to develop silicosis.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on March 1, was 7,127, their employees numbering 960,394 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,760, having an aggregate membership of 209,327 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of March, 1930, as reported by Employers

Largely owing to seasonal curtailment in the outdoor industries, there was a decline in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 7,127 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 960,394 persons, as compared with 973,460 in the preceding month. This decrease caused the index number (based upon the average for 1926 as 100) to decline from 111·6, on February 1, 1930, to 110·2 at the beginning of March, as compared with 111·4, 102·6, 97·5, 92·6, 88·1, 91·8, 91·0, 82·9 and 89·1 on March 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Improvement was indicated in manufacturing, but seasonal reductions were shown in logging, construction, mining and trade, those in logging, following an extremely active season, being particularly noteworthty.

Employment by Economic Areas

The trend was downward in the Maritime Provinces, Quebec, Ontario and the Prairie Provinces, but in British Columbia improvement was indicated.

Maritime Provinces.—There was a large decrease in the Maritime Provinces, where 538 employers reduced their staffs from 75,358 persons on February 1, to 74,032 at the beginning of March. Gains were registered in manufactures, particularly in iron and steel works, and transportation and trade were also busier. Logging, mining, communications, and construction, however, recorded seasonal losses. Employment on March 1, 1929, had shown a gain, but the index then was lower than on the date under review.

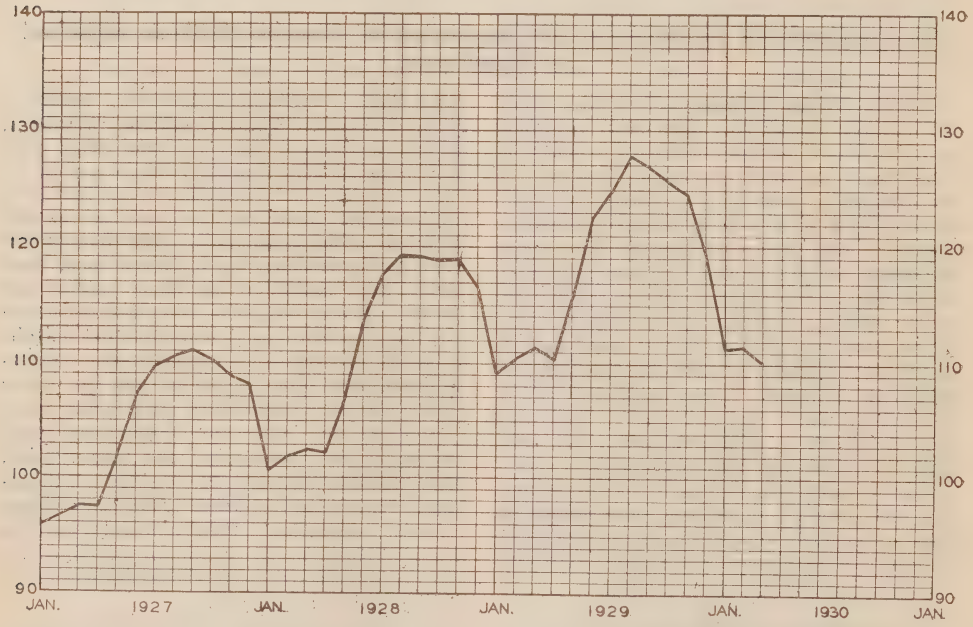
Quebec.—In spite of the fact that activity declined at the beginning of March, employment in Quebec was at a higher level than in the early spring in any other year of the record. The decrease as compared with the preceding month was due to seasonal curtailment in logging and construction. Transportation and manufacturing, on the other hand, were decidedly brisker; within the latter group, the iron and steel, textile, and pulp and paper divisions showed the largest gains, while tobacco factories were slacker. Statements were tabulated from 1,635 firms, whose payrolls aggregated 268,812 employees, as against 273,022 at the beginning of February. The index stood at 106·6, as against 104·7 on March 1 of a year ago.

Ontario.—Curtailment was registered in Ontario, where the 3,230 co-operating establishments reduced their labour forces by 5,384 persons, bringing them to 411,991 on March 1. The situation was not so favourable as that noted on the same date of last year, but was better than on March 1 in any other year of the record. Iron and steel, textile and lumber products recorded considerable recovery, and mining, communications, services and trade were more active than on February 1; logging and construction, however, were seasonally slacker, while reductions were also

registered in pulp and paper, tobacco and some other factories.

Prairie Provinces.—As is customary in the early spring, there was a contraction in the Prairie Provinces on March 1, but this involved a larger number of workers than those recorded on the same date in most other years for which data are available; the index was lower than on March 1, 1929, but higher than in any other year since 1920. Statistics were tabulated from 1,015 firms with 124,681 employees, compared with 130,058 in their last report. Manufacturing, notably of iron and steel products, registered moderate increases, while mining, transportation and trade reported the greatest declines.

Index numbers of employment by economic areas are given in Table I.



Employment by Cities

Employment declined in Montreal, Quebec, Toronto, Hamilton and Winnipeg, while the trend was favourable in Ottawa, Windsor and adjacent Border Cities and Vancouver.

Montreal.—Reductions were indicated in Montreal, chiefly in construction, while considerable improvement was shown in manufactures, especially in iron and steel and textile factories. Statements were tabulated from 896 firms employing 133,710 workers, as compared with 134,858 in the preceding month.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Manufacturing, particularly of lumber products, recorded important advances in employment, as did logging, transportation and construction, but mining was slacker. The working forces of the 709 reporting employers aggregated 80,878 persons, as against 77,647 in the preceding month. Additions to staffs on a larger scale had been indicated on March 1 of last year, when the index was slightly lower; the level of employment was higher on March 1, 1930, than in the early spring of any other year of the record. The tendency on March 1, 1929, was upward, but the index then was slightly lower.

Quebec.—Manufacturing and construction afforded less employment, while other industries reported only small, general changes. The working forces of the 116 co-operating employers totalled 11,092 persons, compared with 11,402 on February 1, 1930. The index was lower than on the same date in 1929, though it was higher than in earlier years of the record.

Toronto.—Iron and steel and pulp and paper factories reported a considerable decrease, and

there was also a seasonal falling-off in construction. On the other hand, textile plants, services and trade afforded more employment than on February 1. According to returns received from 988 firms in Toronto, they had reduced their staffs from 123,737 workers in the preceding month to 122,990 at the beginning of March. Gains had been indicated on the same date of last year, when the index stood at 116·6, compared with 115·9 on March 1, 1930.

Ottawa.—Employment in Ottawa showed a small increase; iron and steel plants were more active and trade also was rather brisker. The 147 co-operating employers reported a total payroll of 12,497 on the date under review. Activity was greater than on March 1, 1929, when a slight reduction had been noted.

Hamilton.—Manufacturing, especially of iron and steel products, electrical apparatus and building materials, afforded less employment in Hamilton, where 218 firms employed 36,168 workers, as compared with 36,905 in their last report. Expansion had been recorded on the same date last year, and the situation then was rather more favourable.

Windsor and Adjacent Border Cities.—Further pronounced improvement was indicated in the Border Cities, mainly in automobile factories. Data were received from

Note.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative Weight of Employment by Districts as at Mar. 1, 1930	100·0	7·7	28·0	42·9	13·0	8·4

135 firms with 16,996 employees, or 1,120 more than on February 1. Employment was at a lower level than at the begining of March, 1929, although it was higher than in the early spring of other years on record.

Winnipeg.—There was another reduction in Winnipeg, where 337 employers reported 31,256 workers, as against 31,966 in the preceding month. The decline was largely in trade, while manufactures were somewhat busier. Employment was not quite so active as on March 1 last year, when losses had also been registered.

Vancouver.—Construction and transportation recorded small gains in Vancouver; returns were compiled from 272 employers, whose staffs were increased by 266 persons to 28,965 at the beginning of March. Improvement on a larger scale had been shown on the same date a year ago, but the index then was lower than on the date under review.

Index numbers of employment by cities are given in Table II.

Manufacturing

The trend of employment in this group continued upward, according to statistics furnished by 4,311 manufacturers employing 533,041 operatives, as compared with 529,661 at the beginning of February. The most pronounced recovery took place in iron and steel factories; lumber mills showed seasonal gains,

Note.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

which exceeded the average increase recorded on March 1, and there were also important advances in textiles. Pulp and paper, tobacco, building material and some other establishments, however, registered reduced employment. The general improvement in manufactures was less than on March 1, 1929, when the index number was several points higher than on the date under review.

Animal Products, Edible.—Employment in this industry showed a further decline which involved rather more workers than that recorded on the same date last year. The index numbers stood at 100·6, as compared with 104·7 on March 1, 1929. The working forces of the 184 reporting establishments aggregated 16,479 persons, as compared with 16,695 in the preceding month. The decrease, which took place mainly in the Prairie Provinces, was most pronounced in meat-packing plants.

Leather and Products.—There was a slight improvement in employment in this industry at the beginning of March, according to statistics from 189 manufacturers, whose staffs, at 16,731, were larger by 22 workers than on February 1. Gains in Quebec were offset by losses in Ontario. A greater increase had been noted on the corresponding date a year ago,

Note:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

when the index number was practically the same.

Lumber and Products.—Further additions to payrolls were made in the lumber group, sawmill, container, and other wood-using establishments reporting heightened activity. Statements were tabulated from 713 employers, whose staffs rose from 43,898 workers on February 1, to 45,978 at the beginning of March. The tendency was favourable in all provinces except Quebec, but the most noteworthy increases were registered in British Columbia. The index number, though lower than on March 1, 1929, was higher than in the early spring of any other year since 1920.

Plant Products, Edible.—Small reductions were recorded in the edible plant product group, all groups of which showed slight cur-

Table IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative weight	Mar. 1, 1930	Feb. 1, 1930	Mar. 1, 1929	Mar. 1, 1928	Mar. 1, 1927	Mar. 1, 1926	Mar. 1, 1925

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

tailment. The firms making returns to the Dominion Bureau of Statistics, 371 in number, had 28,573 workers in their employ, or 150 more than at the beginning of February. Quebec and Ontario showed decreases, while elsewhere there were minor gains. The tendency was upward at the beginning of March last year, when the index number stood at 100·2, compared with 100·9 on the date under review.

Pulp and Paper Products.—As on March 1, 1929, there was a falling-off on the date under review, chiefly in printing and publishing shops, while pulp and paper mills showed improvement. A combined working force of 65,165 persons was reported by 538 co-operating manufacturers, who had 65,591 employees on February 1. The situation was practically the same as in the early spring of 1929. The largest decline took place in Ontario, while increased activity was reported in Quebec.

Rubber Products.—A moderate falling-off in employment was recorded in rubber factories, 38 of which employed 16,317 workers, as against 16,470 in their last report. The index number was higher than on March 1 in any other year of the record except 1929. Gains were made in Quebec, but there was a reduction in Ontario.

Textile Products.—Garment, cotton and knitting factories registered an increase which involved about the same number of employees as that reported on March 1, 1929. The level of employment then, however, was higher. The payrolls of the 672 co-operating establishments aggregated 84,695 persons, as compared with 82,521 on February 1. Considerable improvement was registered in Quebec and Ontario, while elsewhere only small changes occurred.

Tobacco, Distilled and Malt Liquors.—Losses in employment were noted on March 1 in tobacco factories; the index number, at 121·5, was practically the same as on the same date last year. Data were received from 151 firms employing 15,592 workers, or 1,058 less than in their last report. The bulk of the decrease was in Quebec and Ontario.

Clay, Glass and Stone Products.—Activity again declined in building material plants, in which the situation was not quite so good as on the same date in 1929, although it was better than in earlier years of the record. Statements were compiled from 149 manufacturers with 10,781 employees, as against 11,280 in the preceding month. Practically all the loss took place in glass factories, and was recorded in Quebec and Ontario.

Electric Current.—Employment in plants producing electric power showed a moderate recession, according to the 95 co-operating firms who employed 15,077 workers, compared with 15,177 on February 1. There were increases in Quebec and the Prairie Provinces, but declines in Ontario and British Columbia. The index number was higher than on March 1 of any other year of the series.

Electrical Apparatus.—The trend of employment was downward in electrical appliance factories, 50 of which reduced their payroll by 286 persons to 16,185 on the date under review; Ontario registered most of the loss. Improvement had been indicated at the beginning of March, 1929, when the index number was much lower.

Iron and Steel Products.—Continued advances were reported in the iron and steel industry, in which employment was, however, in smaller volume than in the early spring of 1929, although it was higher than in any other year of the record. Automobile and railway car shops registered the greatest increases, but there was also an upward movement in rolling mills, shipbuilding and heating appliance works. Returns were tabulated from 684 establishments having 150,944 persons in their employ, or 2,257 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted except in British Columbia.

Non-Ferrous Metal Products.—Smelters and refineries showed heightened activity, while other non-ferrous metal plants reported curtailment; 111 firms had 20,473 workers on their payrolls, as against 20,392 at the beginning of February. The additions to staffs were made chiefly in Ontario. The level of employment was practically the same as on March 1, 1929.

Mineral Products, n.e.s.—Statistics tabulated from 84 employers indicated that they had reduced their forces from 14,029 workers in the preceding month to 13,738 at the beginning of March. The situation on the corresponding date a year ago had shown improvement, but the index number then was decidedly lower.

Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 254 firms had 47,999 men in their employ, or 8,299 less than in their last report. The decline involved a greater number of workers than that recorded at the beginning of March a year ago, when

the index was over ten points lower, employment during the past winter having been unusually active.

Mining

Coal.—Employment in both Eastern and Prairie coal fields showed a falling-off, which involved the release of more workers than that indicated on March 1, 1929, when the index number was several points higher. Eighty operators reduced their labour forces from 30,242 persons on February 1, to 28,216 at the beginning of March, 1930.

Metallic Ores.—In contrast with the declines indicated on the same date last year, there were general advances in employment in this group. Data were received from 72 mines employing 17,498 workers, as against 17,199 at the beginning of February. The situation was much better than in any other March on record.

Non-Metallic Mineral (Other than Coal).—Additions to staffs were registered in these industries, chiefly in Ontario and the Prairie Provinces; 66 employers reported 7,469 persons on their payrolls, or 250 more than in their last report. Practically no change had been noted on March 1 a year ago, when the index was rather lower.

Communications

Reductions in personnel were indicated on telegraphs and telephones, which, however, afforded more employment than in the early spring of other years of the record. Returns were received from 168 companies and branches with 28,876 employees, compared with 29,386 in the preceding month. Improvement had been registered on March 1, 1929, when the index was lower.

Transportation

Street Railways and Cartage.—Statistics tabulated from 146 employers in this division showed that they had reduced their payrolls by 1,465 persons to 23,838 at the beginning of March; this decrease took place mainly in the Prairie Provinces. Losses had also been noted on the same date in 1929, when employment was not so active.

Steam Railways.—Continued but smaller reductions were registered in steam railway operation, from which 104 workers were released by the 105 co-operating companies and divisional superintendents, on whose payrolls were 76,415 persons. A much greater loss had been indicated on March 1 last year, but the index number was then several points higher. Declines were noted in Ontario and the Prairie Provinces, but in Quebec and the Maritime Provinces gains were indicated.

Shipping and Stevedoring.—An important increase in employment occurred in shipping and stevedoring, mainly in the Maritime Provinces and British Columbia. Employment was slightly more active than on March 1, 1929, when curtailment was indicated. On the date under review, 73 employers reported a staff of 12,259 persons, or 924 more than in the preceding month.

Construction and Maintenance

Building.—Contrasting with the advance indicated on the same date last year, there was a decrease in employment in building construction at the beginning of March. The 650 contractors furnishing data had 42,055 employees, as against 44,679 on February 1. All provinces except British Columbia recorded reductions. Despite this loss, the index number was considerably higher than in the early spring of any other year for which data are available.

Highway.—Shrinkage in employment involving a rather larger number of workers than on the correspaonding date in 1929 was indicated in this group on March 1, 1930, when 196 employers reported 9,038 workers, as compared with 9,761 on February 1. Most of this contraction took place in Ontario. Employment was in greater volume than on March 1 a year ago.

Railway.—Employment on steam railway construction and maintenance showed a decrease, according to data received from 39 companies and divisional superintendents employing 28,589 persons, or 1,069 less than at the beginning of February. The contractions were chiefly in Quebec. Improvement had been noted at the beginning of March in 1929 when the index was higher.

Services

Very little change was noted in the service group, 225 establishments reporting a staff of 21,022, compared with 21,041 on February 1. Activity was higher than in the same month of earlier years of the record.

Trade

Retail and wholesale trade continued to release employees; there was a seasonal decrease of 1,080 in the personnel of the 742 firms furnishing data, who had 84,079 workers. Employment was in decidedly greater volume than on March 1 of any other year for which statistics are available. The index stood at

123·0, compared with 117·8 at the beginning of March, 1929, the previous maximum for that date.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

(2) Unemployment in Trade Unions at the Close of February, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

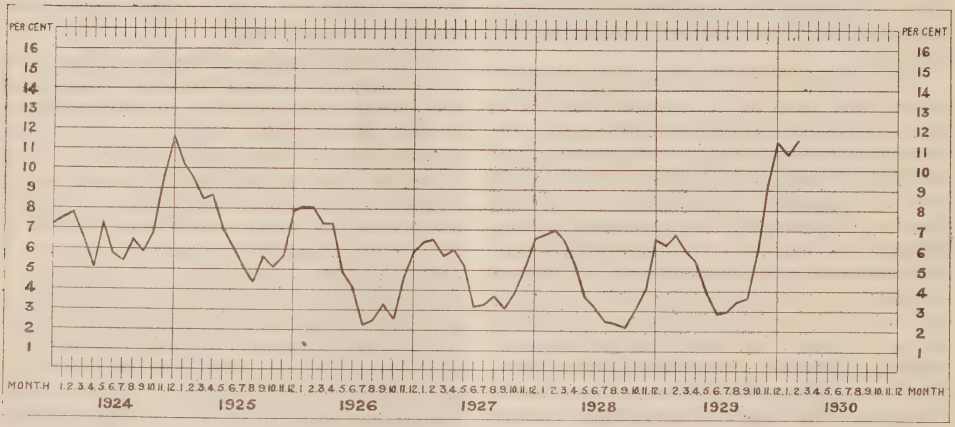
A slight reduction in the volume of activity among local trade union members was manifest at the close of February from the previous month according to the reports tabulated from a total of 1,760 labour organizations with an aggregate membership of 209,327 persons. Of these, 24,175 were unemployed on the last day of the month, a percentage of 11.5 compared with 10.8 per cent of idleness in January. In the Maritime provinces slight improvement in conditions was registered during February, the remaining provinces indicating a somewhat lower employment level. The changes throughout, however, were small. Compared with the February, 1929, returns when 6.8 per cent of the members reported were unemployed, declines in activity were registered in all provinces during the month reviewed, the most extensive of which occurred in Saskatchewan and Alberta.

Unemployment affecting trade union members in the largest city in each province with the exception of Prince Edward Island is compiled separately each month. Of these cities Halifax, Montreal, Toronto, and Edmonton all reported moderate curtailment of activity during February from the preceding month, while in Saint John, Winnipeg and Regina nominal contractions only were apparent. On the other hand, Vancouver unions showed a slightly better situation. Edmonton unions reported the most substantial employment recession when compared with February last year, though the reductions in Halifax, Regina and Toronto also were noteworthy. In addition a lower level of employment was maintained in Vancouver and Montreal than in February a year ago. Slight expansion, however, was reported from Saint John and Winnipeg.

From the chart accompanying this article it will be noticed that the curve of unemployment during February followed a slightly upward course from that of January, an evidence of a small increase in unemployment. Greater divergence was shown in the level of the curve when compared with February a year ago, the point attained at the close of the month reviewed being considerably higher than in February, 1929.

The manufacturing industries at the close of February showed only slight variation from the January situation, the changes occurring in the various trades being of a rather offsetting nature. Returns for February were tabulated from a total of 502 unions in the manufacturing industries with 60,438 members, 8.5 per cent of whom were idle at the end of the month, in contrast with 8.8 per cent in January. The volume of employment for pulp and paper makers showed a substantial gain from January, and among general labourers, printing tradesmen, fur and wood workers, and cigarmakers moderate increase in activity were noted. Of the reductions, the most noteworthy was apparent among garment workers, with contributing declines on a smaller scale among glass and leather workers. Iron and steel workers recorded the same percentage of idle members in both months compared as did also textile workers. In comparison with the returns for February last year in the manufacturing industries, when 6.5 per cent of idleness was registered, practically all trades showed some reduction in available employment during the month reviewed, the most noteworthy of which was reflected by garment, iron and steel, and leather workers, and general labourers.

From unions of coal miners 44 reports were received in February, combining a membership of 16,936 persons, 961 of whom were idle at the end of the month, a percentage of 5.7, contrasted with unemployment percentages of 4.2 in the previous month and 5.6 in February, 1929. Nominal improvement in conditions was shown by Nova Scotia miners when compared with January, while in Alberta employ-



ment eased off slightly, more substantial reductions, however, being recorded in British Columbia, where, owing to mine shutdowns, a considerable number of workers were thrown out of employment during the month reviewed. Nova Scotia unions reported a better situation than in February last year, but the employment recessions indicated by Alberta and British Columbia coal miners, were just sufficient to sway the percentage for the group as a whole adversely. Considerable short time was registered by coal miners in both the eastern and western coal fields during February.

Continuing the unfavourable movement of the last few months in building and construction operations, employment in these trades showed some falling off in February, the 218 reporting unions with 30,523 members indicating 34.0 per cent of inactivity at the close of the month contrasted with 30.6 per cent in January. Declines in employment involving the greatest number of workers were registered by bricklayers, masons and plasterers, and activity for painters, decorators and paperhangers, carpenters and joiners, electrical workers and plumbers and steamfitters was somewhat retarded. Bridge and structural iron workers and steam shovel and dredgemen, who together comprise but a small share of the total group membership reporting, also registered substantial unemployment increases. The situation for hod carriers and building labourers, and tile layers, lathers and roofers, however, was decidedly better than in January, and nominally improved conditions were indicated by granite and stonecutters. The employment level in the building trades, as a whole, was considerably lower than that shown in February, 1929, when 19.8 per cent of idleness was recorded, granite and stonecutters alone reporting a more favourable situation during the month under survey. Of the contractions shown in the remaining trades those recorded by carpenters and joiners were the most extensive, though declines of a noteworthy character were shown also by bricklayers, masons and plasterers, painters, decorators and paperhangers, plumbers and steamfitters and electrical workers.

From unions in the transportation industries 753 reports were received in February, covering a membership of 71,620 persons, 8.1 per cent of whom were idle at the end of the month, compared with 7.3 per cent in January and with 4.5 per cent in February last year. Steam railway employees whose returns constitute about 80 per cent of the entire group membership reporting, were chiefly responsible for the less favourable situation reported, both as compared with the previous month and February, 1929, though among street and electric railway employees and teamsters and chauffeurs some slight falling off in employment was apparent in both comparisons. Practically the same volume of unemployment was reported by navigation workers as in January, but moderate improvement in conditions was shown over February of last year.

From longshoremen whose returns are tabulated separately each month, owing to the casual nature of their work, an unemployment percentage of 10.8 was reported at the end of February, contrasted with 25.4 per cent in January and with 10.5 per cent in February last year. The percentage for the month under review was based on the returns received

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

from 14 associations of these workers with 6,422 members.

Retail clerks reported no idle members at the close of February as in January, contrasted with 8.8 per cent of inactivity in February a year ago. Returns for February this year were received from 5 unions of retail clerks with 1,163 members.

Civic employees were slightly better engaged during February than in the previous month, the 64 unions from which returns were received with an aggregate membership of 6,694 persons indicating 1.6 per cent of idleness compared with 2.5 per cent in January.

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Employment, however, was not quite so brisk as in February last year, when 0.8 per cent of idleness was recorded.

Activity for workers in the miscellaneous group of trades was somewhat retarded in February as shown by the reports tabulated from 118 local unions with 6,787 members. Of these 652 or a percentage of 9.6 were idle at the end of the month, compared with 8.9 per cent in January. The percentage of unemployment also exceeded that shown in February, 1929, when 6.3 per cent of the members reported were idle. That the situation was less favourable than in January may be attributed to the drop in the volume of work afforded theatre and stage employees. Hotel and restaurant employees and barbers, on the other hand, reported slight gains in employment, while among stationary engineers and firemen practically no change occurred. Compared with the returns for February last year barbers alone were busier during the month reviewed, while theatre and stage and hotel and restaurant employees and stationary engineers and firemen suffered employment curtailment.

Fishermen reported a situation during February much improved from the previous month, due to the opening up of the halibut fishing season in British Columbia, the 4 unions from which reports were received, with 841 members, showing 2.4 per cent of inactivity, contrasted with 18.4 per cent in January. In February last year, however, all members were reported busy.

The unemployment percentage for lumber workers and loggers stood at 13.0 at the close of February, as compared with percentages of 12.2 in January and 5.5 in February, 1929. The percentage for February this year was based on the returns tabulated from 5 unions of these workers, covering a membership of 1,243 persons.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive and also the percentage of unemployment by provinces for February of each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

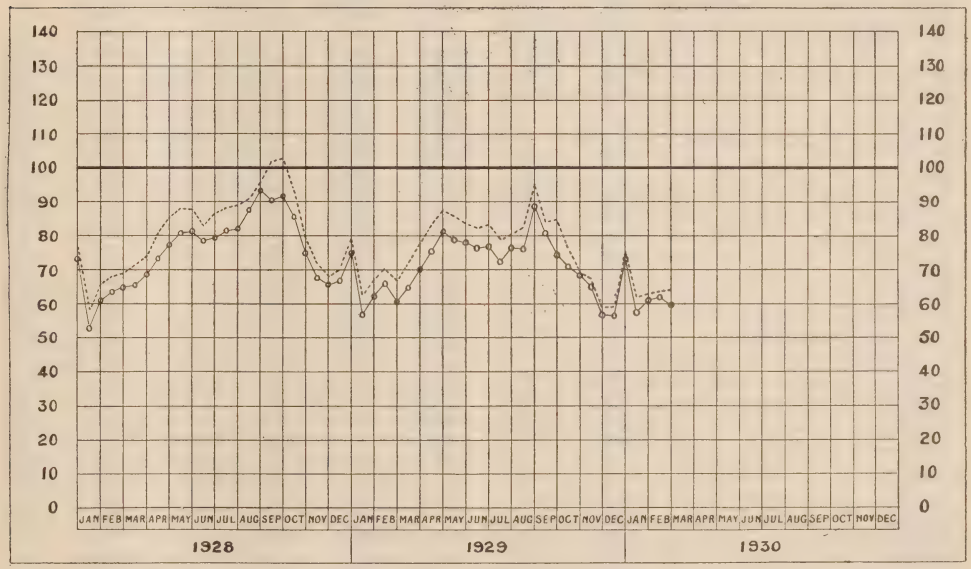

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month.	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile and carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals.	Clay, glass and stone products.	Mineral products.	Miscellaneous manufacturing industries.	Building and construction.	Transportation.	Shipping and stevedoring.	Steam railway operation.	Local transportation.	Communication.	Telegraph operation.	Telephone operation.	Trade (retail shop clerks).	Services.	Governmental.	Miscellaneous.	All occupations.

(3) Employment Office Reports for February, 1930

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1930, as indicated by the average daily placements effected, showed a decline of 8 per cent from that of the previous month, but an increase of more than 9 per cent over February, 1929. All groups, except farming, showed declines in placements from January and in that industry the gain was nominal only, while in comparison with February a year ago the gain was largely attributable to a substantial increase in the highway division of construction throughout the month, while that of placements rose slightly during the first half of the period under review, but showed a slight downward trend during the second half of the month. At the close of February the curve of vacancies was three points below the level shown at the close of the corresponding month a year ago, while that of placements was practically the same as in 1929. The ratio of vacancies to each 100 applications was 63·8 and 64·1 during the first and second half of February, 1930, in contrast with the ratios of 70·3 and 67·0 during the same

Positions Offered and Placements Effected for Each One Hundred Applications for Employment

and maintenance due, for the most part, to work undertaken by the different municipalities in the relief of unemployment. Logging also registered an increase, though in a minor degree, while all other groups showed declines.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Employment Service of Canada, computations being made semi-monthly. It will be seen that the curve both of vacancies and of placements in relation to applications showed little variation during February, the curve of vacancies following a slight upward trend periods in 1929. The ratios of placements to each 100 applications during the periods under review were 62·0 and 59·9 as compared with 66·0 and 60·7 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1930, was 966 as compared with 1,053 during the preceding month and with 913 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,510 as compared with 1,685 in January and with 1,331 during February, 1929.

The average number of placements made daily by the offices of the Service during February, 1930, was 920, of which 457 were in regular employment and 463 in work of one week's duration or less, as compared with a total daily average of 998 during the preceding month. Placements in February last year averaged 841 daily, consisting of 489

placements in regular and 352 in casual employment.

During the month of February, 1930, the offices of the Service referred 23,132 persons to vacancies and effected a total of 22,073 placements. Of these the placements in regular employment were 10,965, of which 7,839 were of men and 3,126 of women, while placements in casual work totalled 11,108. The number of vacancies reported by employers was 15,947 for men and 7,228 for women, a total of 23,175, while applications for work numbered 36,223, of which 25,715 were from men and 10,500 from women.

The following table gives the placements recorded by the offices of the Employment Service of Canada each year from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (2 months)	26,315	21,687	48,002

Nova Scotia

There was an increase of nearly 15 per cent in the number of positions offered through employment offices in Nova Scotia during February, when compared with the preceding month and of over 26 per cent in comparison with the corresponding month last year. Placements were nearly 15 per cent higher than in January and over 25 per cent above February, 1929. Logging was the only group in which placements were appreciably less than during February last year, although there were minor declines in farming, communication and transportation. Of the gains in all other groups, those in services, manufacturing, trade, and construction and maintenance were the most substantial. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 74; logging, 50; transportation, 38; construction and maintenance, 85; trade, 70; and services, 390, of which 261 were of household workers. There were 167 men and 60 women placed in regular employment during the month.

New Brunswick

During February, orders received at employment offices in New Brunswick called for 7 per cent less workers than in the preceding month, but showed a gain of over 10 per cent when compared with the corresponding month last year. There was a decline of nearly 4 per cent in placements in comparison with January, but a gain of over 8 per cent over February, 1929. Increased placements in construction and maintanance and services were responsible for the gains over February last year as the changes in all other groups were small. Placements by industrial divisions included: manufacturing, 35; construction and maintenance, 48; and services, 496, of which 356 were of household workers. During the month regular employment was obtained for 60 men and 48 women.

Quebec

Orders received at employment offices in the province of Quebec during February called for about 37 per cent less workers than both in the preceding month and in the corresponding month last year. There was a decline of over 26 per cent in placements when compared with January and of over 24 per cent in comparison with February, 1929. Fewer placements were made than in February of last year in all groups, except mining and transportation, and in these the gains were nominal only. A large reduction in placements under building construction was mainly responsible for the decline under this comparison. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 70; logging, 261; construction and maintentance, 130; trade, 33; and services, 433, of which 359 were of household workers. There were 469 men and 360 women placed in regular employment during the month.

Ontario

Opportunities for employment as indicated by orders received at employment offices in Ontario during February were nearly 13 per cent less than in the preceding month, but showed a nominal gain over the corresponding month of last year. Placements declined nearly 10 per cent when compared with January, but were on practically the same level as in February, 1929. There was a substantial gain in placements, over February of last year in the highway division of construction and maintenance largely attributable to work undertaken in relief of unemployment. Logging also showed some improvement. The gains in these groups, however, were almost entirely offset by declines in other divisions, of which those in manufacturing and services were the most pronounced. Placements by industrial groups included; manufacturing, 1,090; logging, 1,294; farming, 368; mining,

65; transportation, 121; construction and maintenance, 3,228; trade, 425; and services, 2,916, of which 1,757 were of household workers. During the month 3,878 men and 1,236 women were placed in regular employment.

Manitoba

The demand for workers as indicated by orders received at employment offices in Manitoba during February was over 12 per cent less than in the preceding month, but showed a nominal decline only when compared with the corresponding month of last year. There was a decrease of 22 per cent in placements when compared with January, but a gain of nearly 10 per cent in comparison with February, 1929. Substantial gains in placements over February last year were made in logging and construction and maintenance, but a large reduction under services, and smaller declines in manufacturing and trade offset, in part, these increases. The changes in other groups were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 40; logging, 714; farming, 350; construction and maintenance, 332; trade, 114; and services, 1,261, of which 996 were of household workers. Placements in regular employment numbered 1,130 of men and 446 of women.

Saskatchewan

Employment opportunities as indicated by orders received at employment offices in Saskatchewan during February were nearly 15 per cent less favourable than in the preceding month, and over 5 per cent fewer than during the corresponding month last year. Placements also declined over 13 per cent when compared with January, but showed a nominal gain over February a year ago. There was a large increase in placements in the highway division of construction and maintenance over February, 1929, but this gain was offset by reductions in other divisions, of which those in farming and trade were the most pronounced. Manufacturing, in which there was a nominal increase only, was the only division, other than construction and maintenance, in which there was an increase in placements. Placements by industrial divisions included: manufacturing, 67; logging, 38; farming, 234; construction and maintenance, 336; trade, 78; and services, 840, of which 462 were of household workers. Regular employment was found for 335 men and 401 women during the month.

Alberta

During the month of February positions offered through employment offices in Alberta were nearly 24 per cent less than in the preceding month, but 84 per cent above the corresponding month last year. Placements also showed approximately the same percentage of change under each comparison. The increase in placements over February last year was almost entirely attributable to gains in the highway division of construction and maintenance, due to work undertaken in relief of unemployment. Services, however, also showed a large increase, but this was offset by declines in the other groups, of which those in manufacturing, logging and farming were the most noteworthy. Industrial groups in which most of the placements were effected during the month were: manufacturing, 56; logging, 363; farming, 311; construction and maintenance, 1,964; trade, 64; and services, 978, of which 512 were of household workers. During the month 1,215 men and 286 women were placed in regular employment.

British Columbia

There was a decline of nearly 11 per cent in the number of positions offered through offices in British Columbia during February, when compared with the preceding month and of 4 per cent in comparison with the corresponding month last year. Placements also were 10 per cent below January and over 3 per cent less than in February, 1929. There were fewer placements in all industrial divisions except construction and maintenance, during the month under review than in February last year, but the gain in this group offset in large measure the reductions in all other divisions. Placements by industrial groups included: manufacturing, 187; logging, 212; farming, 91; transportation, 77; construction and maintenance, 461; trade, 80; and services, 813, of which 538 were of household workers. Regular employment was obtained for 585 men and 289 women during the month.

Movement of Labour

During the month of February, 1930, the offices of the Employment Service of Canada made 10,965 placements in regular employment 5,691 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,068 were granted the Employment Service reduced transportation rate, 782 going to points within the same province as the despatching office, and 286 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire

to travel to distant employment for which no workers are available locally.

The offices in Quebec issued 43 certificates for reduced transportation during February all to bushmen, 27 of whom were destined to employment within the province and 16 to points outside. Provincially the transfers were to the Rouyn zone and effected by the Quebec city office. The movement outside the province was from Hull from which centre 15 bushmen proceeded to Pembroke and one bushman to Cobalt.

Of the 394 persons benefiting by the Employment Service reduced transportation rate in Ontario during February, 390 travelled to provincial centres, the balance representing an interprovincial movement. Within the province 301 bushmen sought employment in logging camps in the vicinity of Timmins, Port Arthur, Peterborough and Sudbury, the majority of whom travelled on certificates issued at Fort William, Port Arthur, North Bay, Sudbury and Cobalt. The Sudbury zone, in addition, received 8 bricklayers, 4 from Fort William and 4 from Port Arthur while to Kingston, Fort William despatched 2 electricians and Port Arthur 26 carpenters. To the Cobalt zone 5 lumber mill workers were transferred from North Bay and to Sault Ste. Marie one boiler maker from Brantford. Securing certificates at the Toronto office, 3 rock drillers proceeded to Port Arthur and one carpenter's helper to North Bay, while at the Windsor office 10 bricklayers received certificates to Sudbury and one machinist to Sarnia. From Cobalt one blacksmith journeyed to Port Arthur and 14 mine workers to points within the Cobalt zone. The balance of the provincial movement was from Sudbury which office despatched one teamster to Ottawa and 16 lumber mill workers within its own zone. Of the 4 workers travelling outside the province 3 were miners for the Winnipeg zone, 2 of whom were shipped from Sudbury and one from Cobalt, the one remaining transfer being of a bricklayer who was carried at the special rate from North Bay to Rouyn.

Transportation certificates issued by Manitoba offices during February totalled 431 of which 171 were provincial and 260 interprovincial. The former were granted at the Winnipeg office to 5 farm hands, 7 farm domestics and 8 hotel employees going to Brandon, one hotel cook to Dauphin, and to 83 bushmen, 60 farm hands, 3 farm housekeepers, 2 pipefitter's helpers and 2 mine workers proceeding to employment at various points within the Winnipeg zone. The majority of the transfers outside the province from Winnipeg were to the Port Arthur zone, which was the destination of 215 bushmen, 2 farm hands, one farm domestic, one dietician, one hospital cook, one blacksmith and 2 housekeepers. In addition, from Winnipeg 10 farm hands and 2 farm household workers were despatched to Regina, 6 farm hands and one farm general to Estevan, one farm hand and one farm housekeeper to Saskatoon, one farm hand each to the Moose Jaw, Weyburn and Yorkton zones and 12 railway construction workers to Nelson. The remaining interprovincial transfer was of a bush worker who went from Dauphin to employment in the Prince Albert zone.

In Saskatchewan 48 persons took advantage of the reduced transportation rate during February, 46 of whom journeyed to centres within the province. Of these, the Regina office was instrumental in the transfer of 11 bushmen and 10 saw-mill workers to Yorkton, one baker, one housekeeper and one farm domestic to Swift Current, 2 farm hands and one domestic to Moose Jaw, one farm hand and one domestic to Estevan, one farm hand to Prince Albert and of 4 farm hands, one hotel waitress and one domestic to points within the Regina zone. From Saskatoon one cook was conveyed to Prince Albert and 4 farm hands to points within the Saskatoon zone, while to centres within their respective zones Prince Albert despatched 3 bushmen and Moose Jaw 2 farm hands. The 2 workers going outside the province travelled from Regina, one a gardener going to Medicine Hat and one a farm hand to Edmonton.

The business conducted by Alberta offices in February involved an issue of 118 reduced transportation certificates, 117 of which were for provincial centres. Of these Edmonton granted 109, the transfer of workers from this point including 83 bush workers, 9 farm hands, one farm housekeeper, 5 saw-mill workers, 5 labourers, 5 mine workers, one railroad construction carpenter and one hotel waitress going to employment at various points within the Edmonton zone. In addition, the Calgary office despatched one farm hand and one hotel cook to Lethbridge, one farm hand to Drumheller, one housekeeper to Medicine Hat, one farm hand and one hotel waitress to Edmonton and 2 farm housekeepers within the Calgary zone. The one interprovincial transfer was of a housemaid who was carried at the special rate from Calgary to Revelstoke.

From British Columbia centres 34 persons travelled to employment at the special rate, 31 going to points within the province and 3 to centres outside. Provincially the Vancouver office transferred 9 mine workers to

Revelstoke, 4 bricklayers to Nelson, 3 miners to Prince George, 2 farm hands to Kamloops, one mine worker to Penticton and 2 miners, 2 farm domestics, 2 loggers and one flunkey to points within the Vancouver zone. To stations within their respective zones Prince George transferred 3 bush workers and Nelson 2 bush workers. The transfers outside the province were of farm labour, New Westminster sending one farm hand to Brandon and one farm cook to Swift Current, and Victoria one farm hand to Drumheller.

Of the 1,068 workers who profited by the Employment Service reduced transportation rate during February, 609 were carried by the Canadian National Railways, 316 by the Canadian Pacific Railway, 56 by the Temiskaming and Northern Ontario Railway, 5 by the Pacific Great Eastern Railway and one by the Northern Alberta Railway.

(4) Building Permits Issued in Canada during February

The value of the building represented by the permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was higher by $1,638,129 or 22·8 per cent than in the preceding month, but was lower by $1,637,460 or 15·6 per cent than in February last year: the total stood at $8,827,870 during February, 1930, as compared with $7,189,741 in January, 1930, and $10,465,330 in February, 1929. The February, 1930, total was twice exceeded in the 11 years' record, the aggregates for 1929 and 1928 having both been larger, but it was considerably greater than the average February figure, while the cost of building materials was lower than in any other year of the record except 1928, when the index was fractionally lower.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 600 permits for dwellings valued at over $2,000,000, and more than 1,100 permits for other buildings, estimated to cost in excess of $6,000,000. In January, authority was given for the erection of some 300 dwellings and 900 other buildings, estimated at approximately $1,400,000 and $5,700,000, respectively.

All provinces except Manitoba and Saskatchewan reported increases in the value of the permits issued as compared with January, 1930; the largest gain, of $1,283,010, or 43·5 per cent, took place in Ontario.

As compared with February, 1929, Nova Scotia, New Brunswick and Quebec registered gains, that of $809,422, or 89·4 per cent in Quebec being most pronounced. Of the decreases in the remaining provinces, that of $1,503,261 or 26·2 per cent in Ontario was greatest.

Of the larger cities, Montreal recorded an increase in the value of the permits issued as compared with January, 1930, and February, 1929. In Toronto and Vancouver, there were gains as compared with the preceding month, but the totals were lower than in the same month of last year, while Winnipeg reported a decline in both comparisons. Of the other cities, the following registered increases in the value of building authorized during February as compared with January, 1930, and February, 1929:—Halifax, Fredericton, Moncton, Saint John, Quebec, Shawinigan Falls, Three Rivers, Chatham, Fort William, Galt, Hamilton, Kingston, Ottawa, Port Arthur, Welland, East Windsor, Medicine Hat, Kamloops, New Westminster, Prince Rupert and North Vancouver.

Cumulative Record for First Two Months, 1930.—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as the index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

Year	Value of permits issued in February	Value of permits issued in first two months	Indexes of value of permits issued in first two months (1920=100)	Average indexes of wholesale prices of building materials in first two months (1926=100)
	$	$		
1930	8,827,870	16,017,611	157·4	96·8
1929	10,465,330	18,882,210	185·6	99·6
1928	10,318,338	18,034,925	177·3	96·4
1927	7,638,176	13,314,713	130·8	97·1

1923	5,679,671	9,819,169	96·5	110·1
1922	4,738,105	8,064,642	79·3	108·3
1921	3,683,359	6,278,923	61·7	140·5
1920	6,156,287	10,173,311	100·0	137·5

The aggregate for the elapsed months of 1930 was lower by 15·2 per cent than the total for the same months of 1929, the previous high level of the record, but was considerably greater than the average for these last eleven years.

The accompanying table gives the value of the building permits issued by 61 cities in January and February, 1930, and February, 1929. The 35 cities for which records are available since 1910 are indicated by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during February is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for March, 1930, and previous months are reproduced below.

Great Britain

The decline in employment observed in the last week of January continued during February.

The increase in the numbers unemployed occurred chiefly in the textile industries, particularly in the cotton, silk and artificial silk, and hosiery trades. The other principal industries in which unemployment increased included engineering, shipbuilding, motor vehicles and cycle manufacture, most of the metal trades, the furniture and woodworking trades, papermaking, the glass bottle industry, the distributive trades, and dock and harbour service.

On the other hand, there was some improvement in the clothing, lace, brick and tile, pottery, and iron and steel industries, and among painters in the building trade.

Among the workpeople, numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service,

the percentage unemployed at February 24, 1930 (including those temporarily stopped as well as those wholly unemployed), was 13·1, as compared with 12·6 at January 27, 1930, and 12·1 at February 25, 1929. The percentage wholly unemployed at February 24, 1930, was 10·0, as compared with 9·8 at January 27, 1930, while the percentage temporarily stopped was 3·1 as compared with 2·8. For males alone the percentage at February 24, 1930, was 13·8, and for females 11·2; at January 27, 1930, the corresponding percentages were 13·4 and 10·4. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at February 24, 1930, was approximately 1,582,000, of whom 1,160,000 were men and 338,000 were women, the remainder being boys and girls. At January 27, 1930, it was 1,534,000, of whom 1,129,000 were men and 315,000 were women; and at February 25, 1929, it was 1,430,000, of whom 1,137,000 were men and 218,000 were women.

United States

Employment in the United States decreased 0·1 per cent in February, 1930, as compared with January, 1930, and pay-roll totals increased 2·9 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of November and December, 1929, and therefore cannot be included in the general statement for the month of February. The number of employees of Class I railroads as at December 15 totalled 1,588,076, representing a decrease of 4·5 per cent since November 15. The amount of pay-roll in the entire month of December was $225,999,045, representing a decrease over the previous month of 2·9 per cent.

Employment in manufacturing industries increased 0·1 per cent in February as compared with January, while pay-roll totals increased 3·5 per cent. These seasonal increases were smaller than in any one of the seven preceding Februarys for which the Bureau of Labour Statistics has information; however, the increase in pay-roll totals was much nearer the normal increase than was the increase in employment. In practically every industry the improvement in pay-roll totals was notably in excess of the change in employment.

These increases are based upon returns from 12,568 establishments in 54 of the leading manufacturing industries of the United States. These establishments in February had 3,210,129 employees, whose combined earnings in one week were $85,895,404.

The bureau's weighted index of employment for February, 1930, is 90·3, as compared with 90·2 in January, 1930; 91·9 in December, 1929; and 97·4 in February, 1929. The index of pay-roll totals for February, 1930, is 90·7, as compared with 87·6 for January, 1930; 92·0 for December, 1929, and 101·8 for February, 1929.

Seven of the 12 groups of industries had more employees in February than in January—iron and steel, leather, chemicals, stone-clay-glass, nonferrous metals, tobacco, and vehicles—while there was no change in employment in the textile group.

Twenty-nine of the 54 separate industries reported increased employment in February, the outstanding increases having been in stoves, stamped ware, fertilizers, cigars, pianos, millinery, automobiles, glass, silk, steam fittings, wagons, agricultural implements, and iron and steel. Among the 16 industries reporting smaller increases were 5 of the textile industries, foundry and machine-shop products, paper, petroleum refining, cement, and cast-iron pipe. The last two industries reported their first increases since the summer of 1929.

The outstanding decreases in employment in February were in confectionery, woollen goods, sawmills, carpets, structural ironwork, machine tools, furniture, smoking tobacco, steam-railroad car shops, electrical machinery, rubber boots, paper boxes, book and job printing, brick, cotton goods, and rubber tires.

Increased pay-roll totals were reported in 35 of the 54 industries, automobiles leading, with an increase of over 25 per cent. Among the 19 industries showing decreased pay-roll totals the greatest decreases—5·1 and 4·6 per cent—were in carpets and woollen goods, respectively.

The rayon and radio industries, which are not yet included in the bureau's indexes, both reported decreased employment in February but there were increased pay-roll totals in the former industry and notably decreased pay-roll totals in the last named.

Increased employment in February was shown in four of the nine geographic divisions, these having been the East and the West North Central, the East South Central, and the South Atlantic.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of em-

ployees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above mentioned:—

Department of Marine and Fisheries

Contracts in Group "A" (Construction, etc.)

Construction of two single dwellings and a reinforced concrete lighthouse at Chebucto Head, N.S. Name of contractor, A. S. MacMillan, Halifax, N.S. Date of contract, November 26, 1929. Amount of contract, $16,900. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour Not more than	
	Per hour	Per day	Per week
Bricklayers	$1 00	8	44
Carpenters	0 73	8	44
Painters	0 73	8	44
Plumbers	0 85	8	44
Sheet metal workers	0 77	8	44
Concrete foreman	0 50	9	54
Concrete workers	0 45	9	54
Labourers	0 40	9	54
Structural steel workers	0 75	9	54
Structural steel workers' helpers	0 45	9	54

Installation of new batteries in hatchery, building of troughs, shelves, etc., Gull Harbour, Man. Name of contractor, Richard Taylor, Selkirk, Man. Date of contract, June 10, 1929. Amount of contract, $1,737.47. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per week
Unskilled labourers	$0 35	54
Skilled labourers	0 45	50
Sheet metal workers	0 80	44
Carpenters	1 10	44
Painters	0 85	44

Construction of marine ways and carriage with covered shed, winch house and machinery, warehouse and living quarters, etc., at Digby Island, B.C. Names of contractors, Pacific Stevedoring Co., Prince Rupert, B.C., and John Currie & Son, Prince Rupert, B.C. Date of contracts, July 29, 1929. Total amount of contracts, $15,396.40. The General Fair Wages Clause was inserted in each contract.

Construction of a combined lighthouse and dwelling at Port Bickerton, N.S. Name of contractor, Stewart C. MacMillan, Isaac's Harbour, N.S. Date of contract, November 28, 1929. Amount of contract, $5,600. The General Fair Wages Clause was inserted in the contract.

Department of National Defence

Contracts in Group "A" (Construction, etc.)

Filling of slough, Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractor, Mr. Joseph Cyr, Cyrville, Ont. Date of contract, March 21, 1930. Amount of contract, $3,854.65. The General Fair Wages Clause was inserted in the contract.

Moving of the Musketry Building at Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractor, Mr. Joseph Cyr, Cyrville, Ont. Date of contract, March 21, 1930. Amount of contract, $3,000. The General Fair Wages Clause was inserted in the contract.

Building foundation for Musketry Building at Rockcliffe Aerodrome, Rockcliffe, Ont. Name of contractor, Mr. W. J. Wills, Ottawa, Ont. Date of contract, March 21, 1930. Amount of contract, $3,800. The General Fair Wages Clause was inserted in the contract.

Department of Public Works

Contracts in Group "A" (Construction, etc.)

Construction of a Grain Inspection Building at Edmonton, Alta. Name of contractors, Doyle Construction Co., Ltd., Edmonton, Alta. Date of contract, February 24, 1930. Amount of contract, $4,495. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Concrete finishers	$1 00	8–10
Concrete m xers	0 50	8–10
Concrete layers	0 50	8–10
Bricklayers and masons	1 45	8
Carpenters and joiners	1 00	8
Metal lathers	1 00	8
Plasterers	1 45	8
Plasterers' helpers	0 60	8
Sheet metal workers	1 10	8
Painters and glaziers	0 95	8
Plumbers and steamfitters	1 15	8
Plumbers and steamfitters' helpers	0 60	8
Electricians	1 00	8
Electricians' helpers	0 60	8
Common labourers	0 45	8–10
Teamster, team and wagon	0 95	8–10
Truck driver	0 50	8–10

Construction of alterations and additions to the public building, Edmonton, Alta. Name of contractors, Poole Construction Co., Ltd., Edmonton, Alta. Date of contract, March 1, 1930. Amount of contract, $345,000 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Bricklayers	$1 45	8
Terra cotta layers	1 45	8
Stonemasons	1 45	8
Plasterers	1 45	8
Plasterers' helpers	0 60	8
Marble and tile setters	1 45	8
Plumbers and steamfitters	1 15	8
Plumbers' and steamfitters' helpers	0 60	8
Sheet metal workers	1 10	8
Sheet metal workers' helpers	0 75	8
Carpenters and joiners	1 00	8
Concrete finishers	1 00	8
Stone carvers	1 50	8
Stone cutters	1 00	8
Structural steel workers	1 00	8
Terrazzo layers	1 00	8
Terrazzo layers' helpers	0 60	8
Metal lathers	1 00	8
Electricians	1 00	8
Electricians' helpers	0 60	8
Steam hoist engineers	0 92½	8
Gasoline hoist engineers	0 75	8
Derrick operations	0 92½	8
Painters and glaziers	0 95	8
Felt and gravel roofers	0 80	8
Ornamental iron workers	0 75	8
Tile setters' helpers	0 65	8
Concrete mixers	0 50	8-10
Concrete layers	0 50	8-10
Common labourers	0 45	8-10
Building labourers	0 50	8-10
Motor truck drivers	0 50	8-10
Teamsters with team and wagon	0 95	8-10

Additions and alterations to public building at Cowansville, P.Q. Name of contractor, Alphonse Daris, Richmond, P.Q. Date of contract, March 6, 1930. Amount of contract, $8,000 and unit prices. The General Fair Wages Clause was inserted in the contract.

Reconstruction of a public wharf at Mirror Lake, West Kootenay District, B.C. Name of contractor, Alfred H. Green, Nelson, B.C. Date of contract, March 18, 1930. Amount of contract, approximately $6,503.41. The General Fair Wages Clause was inserted in the contract.

Construction of a public wharf at Halcyon, West Kootenay District, B.C. Name of contractor, Alfred H. Green, Nelson, B.C. Date of contract, March 18, 1930. Amount of contract, approximately $7,080.98. The General Fair Wages Clause was inserted in the contract.

Construction of repairs to hull, anchor casings, housing, etc., of Dredge P.W.D. *No. 123*. Name of contractor, the Montreal Dry Docks, Ltd., Montreal, P.Q. Date of contract, March 5, 1930. Amount of contract, $13,300. The General Fair Wages Clause was inserted in the contract.

Construction of repairs to hull of Dredge P.W.D. *No. 110*. Name of contractors, Davie Shipbuilding and Repairing Co., Ltd., Lauzon, P.Q. Date of contract, March 8, 1930. Amount of contract, $5,910. The General Fair Wages Clause was inserted in the contract.

Construction of a new substructure for the C.N.R. swing bridge over Burlington Channel and of a substructure and roadway approach for an additional leaf to the Highway bascule bridge over Burlington Channel together with a section of the new north pier 60 feet in length. Name of contractors, The R. C. Huffman Construction Co., Ltd., Toronto, Ont. Date of contract, February 25, 1930. Amount of contract, approximately $358,508.30. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Labourers	$0 40	10
Carpenters	1 00	8
Machinists	0 65	10
Blacksmiths	0 60	10
Blacksmith's helper	0 50	10
Concrete finishers	0 75	10
Deck hands	75 00 month and board	12
	Per hour	
Water boy	0 15	10
Dredge captain	$190 00 month and board	12
Tug captain	$160 00 month and board	12
Dredge engineer	$150 00 month and board	12
	Per hour	
Derrick engineer	$0 75	10
Concrete mixer operator	0 70	10
Diver	1 00	.....
Diver's tender	0 60	.....
Horse, cart and driver	0 70	10
Team, wagon and teamster	1 00	10
Motor truck and driver—5-ton truck.	2 50	10
Motor truck and driver—1 and 2-ton truck.	1 25	10
Fireman	0 45	10

Overtime to be paid beyond the hours above specified according to prevailing conditions in the District governing the various classes in the schedule.

N.B.—The rate for carpenters shown herein is to cover all woodwork, including both form building and crib work.

Contracts in Group "B" (Interior Fittings, etc.)

Construction of new interior fittings for Customs and Excise Building, Niagara Falls, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd., Ottawa, Ont. Date of contract, March 7, 1930. Amount of contract, $1,976. The General Fair Wages Clause was inserted in the contract.

Construction of interior fittings in the public building at Timmins, Ont. Name of contractors, The Office Specialty Mfg. Co., Ltd.,

Ottawa, Ont. Date of contract, March 27, 1930. Amount of contract, $4,073. The General Fair Wages Clause was inserted in the contract.

Construction of interior fittings for the public building at Exeter, Ont. Name of contractors, The Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, March 31, 1930. Amount of contract. $944. The General Fair Wages Clause was inserted in the contract.

Post Office Department

Following is a statement of payments made in March, 1930, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Making Metal Dating Stamps and Type Brass Crown Seals, Cancellers, etc.

Paper-Using Industries in Canada 1926-27

The Forest Products Branch of the Dominion Bureau of Statistics recently published a report on the Paper-Using Industries in Canada (Census of Industry) for 1926 and 1927. This report covers, for the first time in one printed publication, the production in Canada of commodities whose chief component material is paper and paper-board. Two summaries of these statistics have been published annually in the past, one dealing with printing trades and the allied graphic arts, and the other with the manufacture of paper goods. The present report combines these two groups in one with the object of showing the importance of the paper-using industries in their relation to the pulp and paper industry on which they depend to a large extent for their raw material and their importance as a source of supply of the packing material, containers, stationery, printed matter and other paper commodities so necessary in modern industry and business. The report also gives additional reviews for the past years and certain historical and general information relating to the group of industries as a whole.

The wood and paper group of products in Canada comes second in importance to vegetable products both in respect to gross value of production and total value of exports. The steadily increasing importance of this group of products is shown in the following figures:—

	Production	Exportation
1925	$557,194,453	$253,610,024
1926	600,064,661	278,674,960
1927	629,567,156	284,120,267

The wood and paper products in 1927 formed 18.4 per cent of the total value of manufactured products in Canada, and 22.7 per cent of the total value of exports of all kinds of Canadian produce. Summaries of the principal statistics of this industry were included in the tables on the manufacturing industries in Canada, published in the Labour Gazette, October, 1929, pages 1187 and 1188.

WAGES OF EMPLOYEES ON FARMS IN CANADA, 1925-29

THE Dominion Bureau of Statistics secures each year from its agricultural correspondents throughout Canada information as to the wages of employees on farms in Canada during the year just ended. The figures so secured are published in the *Monthly Bulletin of Agricultural Statistics* for the February of the following year. Tables of these figures have appeared in the reports on Wages and Hours of Labour in Canada issued as supplements to the Labour Gazette for January, 1925, to 1930, inclusive, the first of these giving figures back to 1914. The accompanying table includes figures taken from the issues of the *Bulletin* for February, 1929, and February, 1930, for the years 1926, 1927 and 1928, the unweighted figures for 1925 being also included. The averages for 1926 and the following years have been weighted according to the population in each district. The weighting has resulted in slight differences in the averages, being a dollar or two dollars per month in some cases.

AGREEMENT AS TO WAGES AND WORKING CONDITIONS IN WOMEN'S CLOTHING FACTORIES IN MONTREAL

THE following is the text of the agreement entered into between the Montreal locals of the International Ladies Garment Workers' Union and employers in Montreal, terminating a strike of workers from March 10 to 13, covered in the regular article on strikes and lockouts in Canada, elsewhere in this issue. A similar agreement terminated a similar strike which occurred in Toronto at the end of January, Labour Gazette, February, 1930, p. 118.

This Agreement entered into this....day of ....., 1930, between.....doing business at....., in the City of Montreal, Province of Quebec, Dominion of Canada, hereinafter designated as the Employer, and the Joint Board of the Cloak and Suit Makers' Union of Montreal of the International Ladies' Garment Workers' Union composed of the following Local Unions, to wit: Operators and Finishers' Local, No. 43, Cutters' Local No. 19, Pressers' Local, No. 61, all collectively designated herein as the Union, for and in behalf of the said Union, and for and in behalf of the members thereof now employed and hereafter to be employed by the Employer with the same force and effect as if this agreement had been made between the said Employer and the said Union and all individual members now or hereafter employed by the said Employer.

Witnesseth:—Whereas, the Employer is engaged in the manufacture of ladies' garments, and whereas, the Union is composed of garment workers in the several branches of the manufacture of such garments, Whereas, the employer desires to employ members of the Union to perform the work of making such garments; and the parties hereto desire to establish terms and conditions upon which said members of the Union shall work for the Employer, now therefore, in consideration of the sum of one dollar, by each to the other in hand paid, the receipt whereof is hereby acknowledged, and in consideration of the premises, the parties hereto agree as follows:—

AGENCY OF FIRM

1. The Employer, that he recognizes and acknowledges the Union as the agent and representative of the members of the Union.

OBSERVANCE OF AGREEMENT

2. The Union and the Employer that they will, respectively, abide by, observe and perform in good faith the terms and provisions of this agreement and exercise all disciplinary powers which, respectively, they may possess, to secure or enforce, lawfully, due performance of this agreement or adequate compensation for the breach thereof.

UNION SHOPS

3. The Employer, that every employer shall maintain a union shop during the existence in force of this agreement.

DEFINITION OF UNION SHOP

4. The employer and the union, that for the purposes of this agreement a union shop shall mean and include a shop that complies with all union standards and conditions as prescribed by this agreement and employs not less than eight operators and a sufficient complement of workers in other branches of the industry. Provided that in the event of any of the employers now maintaining a shop not requiring and not employing eight operators the maintenance of such a shop with such number of operators shall not be a violation of this term of this agreement.

UNION SHOP

5. The employer, that save as hereinafter otherwise provided, the employer, will employ and retain in their factories none but members in good standing of the above-mentioned union or local unions embraced by the union to perform all cutting, operating, pressing and finishing required by such employers in the manufacture of cloaks, reefers, suits or skirts.

DEFINITION OF UNION MEMBER

6. The employer and the union, that for the purposes of this agreement a member in good standing of the union or of a local union embraced by the union shall mean and include an employee who, being a member as aforesaid, is not in arrears for more than two months in the payment of dues and assessments to his local union or to the above mentioned International Union or Joint Board Union and who is entitled to hold and holds a union membership card from his local union, and such a member will be hereinafter called a union member.

WORKERS' CARDS

7. The Employer, that no new workman shall be engaged by any employer unless or until such workman presents a workman's card directing her or him to the place of business of such employer.

DISCRIMINATION BY EMPLOYER

8. The Employer, that no unjust discrimination of any kind shall be exercised or permitted by it or by any of its members against any employee of any such member, whether by reason of the past activities or attitude of such employee of any such member, whether by reason of the past activities or attitude of such employee in or as to strikes, or in or as to any particular strike or as to labour unionism, or otherwise.

EMPLOYEES

9. The Union and the Employer, that all workers engaged after the execution of this agreement shall, after a trial period of one week, be considered and constituted employees of the employer to engaging the said employee and shall be entitled to all rights, privileges and benefits of this agreement and shall be subject to the conditions and obligations thereof.

SHOP CHAIRMAN AND PRICE COMMITTEE

10. The employees in each shop shall, at a regular meeting, convened at the initiation of the Union, but not during business hours, elect a shop chairman, who shall deal and negotiate with the employer on behalf of the employees, and a price committee, who, with the shop

chairman, will settle prices with the employer on behalf of his employees.

WORKING TOOLS

11. The employer shall supply all his employees with sewing machines, driven by electric power, and with all requisites of working implements.

HOURS OF LABOUR

12. A week's work shall consist of 44 hours divided into five and a half working days as follows:—On the first five days of the week work shall begin at 8 o'clock a.m. and shall continue until 5 o'clock p.m. with an interval of one hour for lunch; on Saturday work shall commence at 8 o'clock a.m. and shall continue until 12 o'clock noon; no work shall be done or shall be permitted on Saturday after 12 o'clock noon. If however, any change of hours will be made during the life of agreement, same change shall automatically be effective in place of above mentioned clause.

PRICE FOR PIECE WORK

13. During the existence in force of this agreement, the basis which shall be adopted for the computation and determination of prices to be paid for piece work shall be the payment, for a week's work by a workman of average ability and efficiency, of the sum of:—

$44 to an operator
$44 to a presser
$39 to an underpresser
$27.50 to a finisher
$35 to a tailor
$20 to a button sewer.

SETTLING PRICES FOR PIECE WORK

14. In the event of the inability of the price committee to agree upon prices with the employer, the employees, if and when so requested shall forthwith proceed with the work pending the settlement of a price and shall receive payment for their work at the price demanded by them.

SAMPLE MAKERS

15. During the existence in force of this agreement, sample makers shall be paid at the rate of $40 per week.

INCREASE OF WAGES

16. With a view to the establishment of the ultimate standard of payment, to employees of average ability and efficiency, of the sum of

$44 to a cutter
$30 to a trimmer

the following increases shall be paid by the employers, that is to say:—

(*a*) An increase at the rate of $3 per week to underpressers, cutters and trimmers now receiving $20 per week;

(*b*) An increase at the rate of $2.50 per week to underpressers, cutters and trimmers now receiving wages at the rate of from $20 to $40 per week;

(*c*) An increase at the rate of $2 per week to underpressers, cutters and trimmers now receiving wages at the rate of $40 per week or more;

(*d*) An increase at the rate of 12½ per cent to finishers and all hand sewers.

PAY OF WEEK WORKER

17. No week worker or piece worker shall be entitled to any pay when he is not working; but a week worker, if put to work shall be entitled to a minimum of a continuous four hours' work of payment therefor. A week worker shall be paid at the aforesaid rate only for the time he works, save as aforesaid. Week workers shall be entitled to be paid for legal holidays by their employers if they have in the year 1929 been paid for legal holidays by their said employers, but not otherwise. If and when the practice of paying week workers for legal holidays is established in Toronto generally, this agreement shall be amended to similarly provide in Montreal.

17½. No worker shall be discharged without cause, in any event he shall be given one week's notice.

NO SECTION WORK SHALL BE PERMITTED IN THE INDUSTRY

18. That the system of section operation or of apprentices in the production of cloaks and suits is a detriment to the industry and shall not be permitted in any of the union shops.

OVERTIME AND RATE OF PAY

19. No overtime work shall be exacted or permitted in the slack season, that is to say, between the 15th of November and the 31st of December nor between the 1st of May and the 15th of July, save in the production of samples and duplicates. In the busy seasons overtime may be worked but shall not exceed ten hours in any one week nor exceed 2½ hours in any one day, and shall be confined to the first four days of the week. No employee shall, however, arbitrarily refuse to work overtime when requested to do so. Until July 1, 1930, overtime work shall be paid for at the same rate as regular time but after July 1, 1930, overtime work shall be paid for at the rate of time and a half.

SUIT SKIRTS

20. All suit skirts shall be manufactured in the inside factory of the said employer. Provided that in the event of any employer not producing sufficient skirts warranting the employment of a skirt maker, the said employer may send such skirts to be manufactured outside of the factory of the said employer but in such event such skirts shall be sent only to a union shop operated under the conditions and provisions of this agreement.

WORK IN OUTSIDE SHOPS

21. No employer shall send any material from his inside factory to be made up in garments or to have any work performed thereon at any outside shop without the written consent of the union, which shall, however, not be unreasonably withheld, and in any event need not be granted unless the work is to be done in a union shop.

NO WORK AT HOME

22. No work shall be given to employees to be manufactured or worked upon at home.

INDIVIDUAL CONTRACTS

23. No employer shall hereafter make any individual contracts with any employee, nor exact or accept any cash deposits or other securities from any employee, nor shall any agreement be entered into with any individual employee guaranteeing any length of employment.

GUARANTEED EMPLOYMENT

24. In the event of an employer desiring to enter into a contract with all his employees,

guaranteeing an established period of employment, the employer may, with the written approval of the union, enter into a time contract stipulating a fixed period during which the employer agrees to assure to all his employees full time of employment.

CONTRACTING SYSTEM

25. No contracting, sub-contracting or sub-manufacturing shall be done in any shop.

NO WORK TO SHOP WHERE STRIKE

26. The employer shall not, directly or indirectly, give work to a contractor or sub-manufacturer, nor purchase any cloaks or suits from a manufacturer, nor accept any work from a jobber against whom the union is conducting a strike.

IDENTIFICATION OF SOURCE OF WORK

27. Every employer shall furnish to the union, upon request, the names and addresses of the manufacturers or jobbers from whom he receives work, cut or uncut..

EFFECT OF STRIKE PENDING

28. Employers shall not do any work for individuals or firms or their principals, agents or jobbers against whom the union has declared a strike, nor shall the said employer send any goods to such firms or its principals, agents or jobbers during a strike, save that the said employer shall not be prevented from making sales of goods to any concern operating a manufacturing department incidental to and maintained solely for supply to any retail establishment maintained by such firm. To facilitate the enforcement of the provisions of this article, the union agrees to supply periodically to the employer a list of manufacturers or jobbers, their principals or agents, against whom strikes are pending.

DIVISION OF WORK

29. In dull times when there is not sufficient work for all employees, the available work in the shop shall be divided as equally as possible among all the employees and others properly engaged in the work, who are competent to do the work.

VISITS TO EMPLOYER

30. A duly authorized officer or representative of the Union shall at all reasonable times have access to the place of business of each employer for the purpose of dealing with any specific complaint, condition or other matter arising out of or appurtenant to this agreement or its operation or the relation of the parties hereto; and such representative and the employer shall together co-operate so as to enable any such matter to be investigated, dealt with and disposed of as satisfactorily and expeditiously as possible.

SANITARY CONTROL

31. In the event of a Joint Board of Sanitary Council being established in the garment industry of Montreal, every Employer shall contribute his pro rata share of the cost of maintenance of such Board and that in such event the Employers will adopt the present uniform sanitary label, to be sewn on each and every garment, so as to designate that garments have been manufactured in union shops under proper sanitary conditions. Said label shall not contain any other inscription than the present one. This label shall be furnished by the International Garment Workers' Union to the Montreal Board of Sanitary Control to be distributed to the manufacturers operating a union shop and fulfilling the requirements of the Montreal Joint Board of Sanitary Control.

NO CESSATION OF WORK

32. During the existence in force of this agreement and pending the negotiation of any dispute and pending the settlement of any price, neither party hereto or any employer or employee will institute or engage in, or authorize or permit or allow any lockout, stoppage of work or strike.

TERM OF AGREEMENT AND RENEWAL

33. This agreement shall enter into force on the date of the execution thereof and shall continue in force for a period of one year, and shall be deemed to be renewed annually unless within four weeks of the first of February in any year either party hereto shall have served notice upon the other party of its intention to determine the provisions of this agreement. Upon such notice so being served the said agreement shall terminate on the first day of February immediately following the serving of such notice.

34. In pursuance of this agreement Employer agrees to deposit $.... with the Union for the faithful performance of the provisions of this agreement.

The agreement between the union and the Association of Manufacturers of Cloaks, Suits and Ladies' Garments of the City of Montreal is similar to the above in terms as to wages and working conditions but contains also a provision for a Joint Conference Board to deal expeditiously and settle all complaints, disputes and grievances, consisting of three representatives from the union and three from the employers' association to meet within twenty-four hours of a complaint being made by either party with provision for an independent arbitrator if no decision is reached by the Board.

An estimate of the average expenditure by the families of working men for medical care is made in a pamphlet by Dr. L. K. Frankel just issued by the Metropolitan Insurance Company. The data used were collected by the company's industrial nurses during the first six months of 1929. The study included 3,281 families selected from practically every State in the United States. The sums paid by individual families ranged from a few cents for medicine in one case, to more than $1,000 for a serious operation and its attendant expenses in another case. The total expended for medical care by the families during the 6 months was $230,907, the average expenditure per family being $70. One-fifth of the families expended 64 per cent of the total. No expenditure whatsoever was reported by 198 families. It was not possible to determine how much should be added to this total to cover the cost of free medical care received from clinics and other agencies. A marked difference in the expenditures *per capita* between large and small families was noted, the larger families spending less *per capita* for health than the smaller families.

AGREEMENTS AS TO WAGES AND WORKING CONDITIONS IN COAL MINES IN NOVA SCOTIA

Drummond Colliery, Westville

DURING the past month five agreements have been signed covering wages and working conditions in the principal coal mines in Nova Scotia.

During March an agreement between the Intercolonial Coal Company, Limited, Westville, N.S., and the Mine Workers' Union of Canada, Local No. 50, was signed, providing for the wages and working conditions arranged between the parties as a result of an inquiry by R. S. MacLennan, K.C., of Sydney, appointed by the Provincial Government under the Nova Scotia Public Inquiries Act. The inquiry was instituted at the request of the coal miners who had been unable to reach an agreement with the company as to wages and working conditions, the chief points in the dispute being that the company refused to recognize the union, stating that it would deal only with committees of employees, and also that conditions in the mines were unsatisfactory. The inquiry opened at Westville on August 15, and sessions were held from time to time until early in October, when at the suggestion of the commissioner it was arranged that a committee of the union and officials of the company with the solicitors for each party should meet with the commissioner to draw up an agreement on the basis of recognition of the union, the employees undertaking to co-operate with the company in producing clean coal; the wage scale to be on the basis of that in the adjoining mines of the British Empire Steel Corporation at Stellarton (Acadia Coal Company, Limited) and the commissioner to settle all differences as to working conditions that might arise.

Toward the end of November an agreement had been drawn up but further meetings to deal with certain details were held until February 6, 1930, after which the result was submitted for ratification to the miners and to the directors of the company.

The changes in wages were made effective from September 1, 1930, and it is understood that the wage scale is to be adjusted in accordance with changes in wages in the Acadia Coal Company Mines, as to which negotiations were then under way. The text of the agreement is given below with the omission of the preamble, the piece-rates for mining, etc. The hours of labour, as those in other coal mines in Nova Scotia since 1919, are 8 hours per day underground and 8½ for most surface employees.

Conditions and Rate Changes on Which New Contract is Based

General

The company will supply each employee with four loads of coal per month at all seasons of the year for his own domestic use, and an employee who is laid up through sickness or injury will be required to pay for coal C.O.D., and the union will assist the company in every way possible to prevent abuses of miners' coal privileges. Employees maintaining a household shall be entitled to coal at miners' price for their own household.

Overtime will be paid time and a half and double time will be paid for Sundays and legal holidays except where employees are required by their employment to work on Sundays and legal holidays when they will be paid time and a half.

When work is to be done on idle days it shall be done by men who ordinarily follow that line of work provided that officials may be employed at any work on idle days.

When an employee is sent home for any reason other than insubordination provisions will be made for a ride to the surface.

Company will supply all materials to working places at the landing.

Mining

Miners will not be required to take or keep a loader when having a loader is going to decrease their earnings provided that where miners have a normal place there should be reasonable grounds for refusing to take a loader.

The company recognizes that there are from time to time places so hard and difficult as to be out of the ordinary. Questions of this kind shall be referred to the Pit Committee and the Underground Manager.

Shotfirers will be instructed to do all possible to help men get their coal out.

Where an extra hole has to be bored on account of bad detonator or any other cause over which men have no control they shall be paid, hand bored or machine drilled, $1 per hole.

Intervention of Stone

Where a place is 20 feet wide and 6 feet high 7½ inches of stone will be considered normal, over this will be paid for at the rate of 13 cents per inch per running yard. This does not include stone in bench. Stone in places of greater or lesser width or height will be paid for in same proportion. Seven and a half inches of stone in a place 6 feet high will be considered normal.

Men lifting or lowering bottom back from the working face will be paid 37 cents per box for all dirt loaded or ordered stowed. All measurements will be made from centre of road and not as formerly from low side rail. Yardage rates will be paid as per schedule.

Where bottom is lowered two feet the work be paid for at the ordinary rate, and where lowered over two feet at one-third of rate per extra foot in depth. The measurement will be average not peak.

Men lifting bottom on balances will be entitled to one company hand when up thirty feet.

It will be optional with men whether they fill chucks with stone. Price to be not less than two hours dead work per chuck.

Shovelling down shall be paid for when thirty feet is completed.

Shovelling out of all cross cuts over 15 feet shall be one day's pay per day after 15 feet is completed if company hand is not sent to do this work, and this shall apply to all cross cuts over the recognized distance.

Shovelling out cross cuts will be paid one shift per day instead of one shift per yard.

If a miner refuses to go loading he will be given a ride to the surface.

Heads driven to crush according to instructions to be paid at head price.

In No. 2 mine cope ups will be paid $2.20 each and all dirt derived therefrom 37 cents per box for loading or stowing.

Undercoal

Price of drawing trees in front of chuck in undercoal will be 10 cents per tree. Not applicable to longwall work.

Price of collar booms breaking off place and renewing when trees have to be drawn $2.48. Other collar booms in undercoal $1.03. All double up collar booms $1.24.

Less than 5 feet height of coal in undercoal shall be a deficient place.

Cleaning out cundies when coming back with pillars in undercoal shall be paid 37 cents per box by measurement for stowing.

Any extra work miners are ordered to do in coming back with pillars such as lifting or relaying road shall be paid for. Any road that has to be relayed will be paid for at 29 cents per yard.

Brushing

Standard height in coal on levels 6 feet measure from low side rail.

Standard height in coal on balances 5 feet 6 inches measure from rail.

Standard height in rock on levels 6 feet measure from low side rail.

Standard height in rock on balances 5 feet 3 inches measure from rail.

Standard height in coal where other than horse haulage 5 feet.

Standard height in rock where other than horse haulage 4 feet 9 inches.

Last two mentioned standard heights shall apply to longwall brushing. All measurements from rail to boom.

Where coal predominates brushing rates shall be as for coal. Where stone predominates brushing rates shall be as for stone.

Doubling up on chucks will be paid for as such.

Corner chucks, where rock, to be cut down level. When this work is ordered done it will be paid for.

Drawing and rebuilding chucks: If bench is hard and it is ordered lifted, taking out coal will be paid 73 cents per yard; if soft men must find suitable bottom for their chuck.

Where booms have to be renewed in rechucking operations they shall be paid at standard rates for doubling up.

Cutting rib stone will be paid 27 cents per lineal yard per foot thick. This does not apply to where 8 continuous hours cutting stone rib is required.

All coal ribbing will be paid 73 cents per yard and coal of any kind will be paid for at coal price. The coal must be free from stone and dirt normally found in the working place.

Ribbing 12 inches from rail to be standard.

When men are brushing anywhere above level sheets company will pay half a shift for brakeholding. First 30 feet of doubling up not included.

When trees are renewed they will be paid at rate of two trees for one except in pillars or where no sampson is used.

All collar booms longwall work will be paid $2.48 each.

Double up collar booms $1.24 each.

Cutting out booms on levels and bords 34 cents each.

On inclines 41 cents each.

Levels and bords cutting 5 block chucks, per yard $1.43.

Inclines cutting 5 block chucks, per yard $1.75.

Contract brushers working on day's pay and brushing rock, also steel booming, will be paid $5 per shift for one man only.

Tracklaying

When relaying sheets measurement shall be taken from centre instead of low side corner.

When lowering roads all grades sheets or turns will be paid one-half measurement.

Lowering breast stick if in good condition. $1.47.

Turning breast stick when bottom good, $1.47.

Cutting rails when not included in contract rate, per cut 18 cents.

Boys

When cleaning down balance is to be done preference will be given to regular slewers and brakeholders.

Where sheets are wet or there is water about sheets water will be drawn off or slewers will be paid extra. What are wet sheets will be determined by Pit Committee and Underground Manager.

Where there are two places on the top sheets the top sheet man will do the brakeholding; where there is coal coming on more than one sheet he will have a brakeholder.

Drivers on night shift shall have helpers.

Timber heads will be made for balances driving up.

When drum is being shifted top and bottom slewers will stay with crew.

When necessary to have four sheets on a balance matter of extra work for slewer will be referred to Pit Committee and proper official and assistance provided in their discretion

Glace Bay, Sydney Mines, Stellarton and Springhill

Negotiations for the renewal of the agreement between the coal mining companies subsidiaries of the British Empire Steel Corporation and the United Mine Workers of America, District 26, expiring January 31, 1930, having been carried on from October 1, 1929, to February 24, 1930, the terms of the new agreement were agreed upon by the representatives of the companies and of the union on February 24, being ratified by a vote of the employees on March 27th. The principal changes in the conditions include: increases in wages of between 5c. and 15c. per hour to employees under $4 per day, the rates for underground labourers being advanced from $3.40 per day to $3.45 and that for surface labourers from $3.25 to $3.40; the abolition of the arrangement for profit sharing provided for in 1928; and a change in Clause 9 regarding regular attendance at work, the new clause providing that the places of men habitually absenting themselves from work may be filled at the discretion of the management. The former clause provided for filling the position after an absence of three days except in case of sickness or with the consent of the manager. It is understood the change is to reduce absenteeism which in some collieries

had been seriously interfering with operations at the beginning of each week. The text of the expiring agreement as to working conditions, with the datal wage scales for each colliery, was given in the Labour Gazette for May, 1928, pp. 519-528, and the terms of the new agreement are practically the same except as noted above.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Pulp and Paper Products

Port Arthur, Ontario.—Thunder Bay Paper Company Limited and the International Brotherhood of Paper Makers, Local No. 249.

Agreement to be in effect from May 1, 1929, to May 1, 1930, and from year to year thereafter until notice is given by either party 30 days before May 1 of any year, and on failure to arrive at a satisfactory settlement, the agreement may automatically terminate.

Preference in employment to be given to union members, and when laying off men, union members will be retained in preference to non-union men. When non-union members are employed, they must join the union within 15 days and maintain membership in it.

Hours: 8 per day for tour workers. The paper machine to be in operation between 8 a.m. Monday and 8 a.m. the following Sunday. On Victoria Day, Labour Day and Dominion Day, the mill to be closed at least 24 hours; at Christmas at least 40 hours. Each day to be divided into three 8-hour shifts, one from 8 a.m. to 4 p.m., the next from 4 p.m. to 12 midnight, the third from midnight to 8 a.m.

Overtime: All overtime and work between 8 a.m. Sundays and 8 a.m. Mondays, time and one half.

Tour workers reporting for work and not needed will receive one hour's pay. Tour workers engaged in putting on wires at a time other than their regular shift to receive six hours' pay for such work.

The rates of wages per hour which are paid by the company are as follows: Machine tenders $1.54 and $1.57; back tenders, $1.36 and $1.39, third hands 98 cents and $1, fourth hands 60 cents, fifth hands 55 cents, mixing system operators 58 cents, clothier 70 cents, head oiler (days) 73 cents, oilers 50 cents.

No strike or lockout to occur during life of the agreement.

All rules, policies and interpretations hitherto mutually adopted by representatives of both parties will remain in force.

The Grievance Committee will meet regularly once a month. Any grievances are to be reported to the Mill Manager for adjustment. If a satisfactory settlement is not made the grievance will be taken up in conference by the General Manager or President of the company and representatives of the International unions, and if they fail to settle it in ten days, the matter will be referred to an arbitration board consisting of one representative of each party and a third chosen by them. If these two representatives are unable to agree on a third, the Minister of Labour, Ottawa, shall appoint the third party, the decision of this board to be final and binding.

A set of rules for employees forms part of the agreement and include the following: All employes must punch the clock at least five minutes before the hour; if later than this, a fifteen minute deduction will be made from the day's time. Actual work must commence promptly and no time to be allowed for going to and from the job. Tour workers are required to stay on the job when their partners are late and must never leave work until relieved. Day workers are forbidden to lunch during working hours. Any employee transferred to another department will go unless it is shown that such transfer is detrimental to health. Workers required to use scaffolds, swaying scaffolds, stagings, runways or boats or to work in connection with live wires, must have the work and equipment inspected by the foreman before proceeding with the work. All accidents must be reported and deliberate violation of safety rules is considered sufficient cause for dismissal.

Port Arthur, Ontario.—Thunder Bay Paper Company Limited and the International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Local 134, and the International Brotherhood of Steam and Operating Engineers, Local 865.

Agreement to be in effect from May 1, 1929, to May 1, 1930, and from year to year thereafter until notice is given by either party 30 days before May 1, of any year, and on failure to arrive at a satisfactory settlement, the agreement may automatically terminate.

Preference in employment to be given to union members, and in laying off men, union members will be retained in preference to non-union men. All permanent employees whose rates are fixed under this agreement must join their respective unions within 15 days. Ques-

tions of jurisdiction will conform with the regulations of the American Federation of Labour and the company will not be asked to compel an employee to join any particular union.

Hours: day workers to work 8 hours per day, 6 days per week; tour workers to work 8-hour shift.

Overtime: All overtime and all work during shutdowns which are from 8 a.m. Sundays to 8 a.m. Mondays and on specified holidays, time and one half. Mechanics called in on repair work between 5 p.m. and 7 a.m. to receive time and one half for time worked and one hour for coming to and from mill with a minimum of four hours' time. One hour's time to be allowed to tour workers reporting for work and not required.

The regular crew in boiler house will be required to hold licence papers as provided by law.

Wages per hour: groundwood mill: tour foreman 70 cents, sulphite screen men 50 cents, oiler and groundwood screen and deckerman 45 cents, grindermen 45 cents, wood truckers 45 cents, wet machine tenders 45 cents, cleaners 45 cents. Sulphite mill: cooks 80 and 85 cents, cooks' helper 57, 60, 63 and 65 cents, blowpit men 48 cents, limestone and sulphur men 45 cents. Boiler house: engineers 75 cents, firemen 60 cents, coal handlers 50 cents, repair men 78 cents, extra engineer and fireman 68 cents, meter men 50 cents, refuse men 45 cents. Finishing room: head wrapper and finisher 50 cents, truckers and wrappermen 45 cents, coremen 48 cents, rewinder man 50 cents, coreman's assistant 45 cents. Wood Room: tour foremen 65 cents, saw filer and millwright 75 cents, millwright 65 cents, oilers 45 cents, chippermen 50 cents, boom man 55 cents, sawyers 50 cents, labourers 45 cents. Mechanics: millwrights 73 cents, millwrights helpers 45 cents and 59 cents, machinist foreman 82 cents, roll grinder men (apprentice) 62 cents, burner and electric welder 70 cents, blacksmith 73 cents, machinist helper 45 and 59 cents, blacksmith helper 45 and 59 cents, electrician—head, 78 cents, electricians 73 cents, motor oiler 50 cents, pipefitters 73 cents, pipefitters' helper 45 and 59 cents, machinists 73 cents. Painters and cleaners: foreman painter and cleaner 73 cents, painter 55 cents, cleaners 45 cents. Yard, Crane and Track: sub-foreman 55 cents, repair man, 55 cents, scaler 50 cents, handy man 50 cents, labourers 45 cents, crane operator 85 cents, crane fireman 50 cents.

The clauses with regard to mill rules, grievance committee, settlement of any disputes, arbitration provisions, etc., are the same as those in the agreement between the company and the International Brotherhood of Paper Makers summarized above.

In the event of cessation of work or a strike through failure to renew the agreement, it is agreed that in order to preserve the properties of the company during the shutdown, the local union will supply, when asked by the company, competent men at the wage rates in this agreement to do electrical work, unloading incoming freight purchased prior to cessation of work, power house operations, operation of dam or regulation of river flows and any other work of a similar nature until it is mutually agreed between the company and the organizations to recommence operations.

Construction: Buildings and Structures

Edmonton, Alberta.—A Certain Marble and Tile Company and the International Hodcarriers, Building and Common Labourers' Union, Local No. 92.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and for another year unless notice of change is given by either party 30 days before May 1, 1931.

Only union members or those qualified and willing to join the union within a week to be employed. Labourers working in the shop will also be covered by this agreement.

Hours: 8 per day, 4 on Saturdays, except mixers who will be allowed half an hour extra per day.

Overtime: all overtime, time and one half; work on Sundays and holidays, double time.

Wages per hour: base machine men 75 cents, base machine apprentices 60 cents, skilled labourers 65 cents, labourers 50 cents.

Mechanics' helpers and floor machine men will be recognized as skilled labourers. Base machine men and mechanics' helpers will qualify in a 60-day period.

On out of town work travelling time, transportation, board and expenses to be paid, but overtime will be worked at straight time.

"Child welfare should be regarded as being a branch of general social welfare, and can be carried forward only in connection with general schemes for the benefit of the whole community." This opinion is expressed in the 17th annual report of the Director of Child Welfare of Nova Scotia for the year ending September, 30, 1929. The director looks for progress in the future in the public recognition of this principle. "Our Children's Aid Societies must broaden their work and increase their staff with trained social workers qualified to do family and community social work in rural districts." Among other provincial measures affecting children in the province the Director makes a strong appeal for the enactment of a Mothers' Allowances Act, as recommended by the Royal Commission in 1921 (Labour Gazette, October, 1921, page 1235). The report contains a review of the work of the Children's Aid Societies at the different centres in the province.

A note on the last report of the Montreal Health Survey Committee appeared in the Labour Gazette, February, 1929, page 196. This note quoted the recommendations of the Committee, one of which read:—"No child under 13 years of age to be employed without having had a medical examination, etc." A member of the committee stated later, in reply to an inquiry, that the minimum age mentioned should have been given as eighteen years (as it appeared in the French edition) instead of thirteen years.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.67 at the beginning of March, as compared with $11.83 for February; $11.23 for March, 1929; $10.92 for March, 1928; $11.05 for March, 1927; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $15.98 for March, 1920; and $7.68 for March, 1914. The price of eggs showed a substantial seasonal fall, while less important decreases occurred in the prices of milk, butter, flour, beans and tea. The prices of veal, mutton, pork, bacon and cheese were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.96 at the beginning of March, as compared with $22.12 for February; $21.52 for March, 1929; $21.15 for March, 1928; $21.29 for March, 1927; $21.77 for March, 1926; $21 for March, 1925; $21 for March, 1924; $21.42 for March, 1923; $20.96 for March, 1922; $23.87 for March, 1921; $25.01 for March, 1920; $20 for March, 1918; and $14.35 for March, 1914. Fuel was practically unchanged. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was substantially lower at 91·9 for March, as compared with 94·0 for February; 96·1 for March, 1929; 97·7 for March, 1928; 97·3 for March, 1927; and 101·3 for March, 1926. Thirty prices quotations were higher, one hundred and eighteen were lower and three hundred and fifty-four were unchanged.

In the grouping according to chief component materials seven of the eight main groups were lower, while one was unchanged. The Vegetables and Vegetable Products group and the Animals and their Products group both showed substantial decreases, the former due to lower prices for grains, rubber and sugar, which more than offset higher prices for oatmeal and rolled oats, and the latter due to lower quotations for fish, hides, calves, hogs, butter and eggs. The other groups which declined were: the Textiles and Textile Products group, because of lower prices for cotton, silk and wool; the Wood, Wood Products and Paper group, due to declines in the prices of lumber, lath and ground wood pulp; the Iron and its Products group, due to lower prices for steel plates, range boilers and wire nails; the Non-Ferrous Metals group, because of lower quotations for lead, silver, tin, zinc and solder; and the Chemicals and Allied Products group, due to declines in the prices of shellac and camphor gum. The Non-Metallic Minerals group was unchanged.

In the grouping according to purpose, consumers' goods were lower, mainly because of declines in the prices of eggs, sugar and butter. Producers' goods also were considerably lower. In this group materials for the textile and clothing industries, for the furs and leather goods industries, for the metal working industries, for the milling and other industries, as well as miscellaneous producers' materials, declined. Materials for the meat packing industries were somewhat higher.

In the grouping according to origin raw and partly manufactured goods declined, due mainly to lower prices for grains, tin, wool, silk, rubber and cotton. Fully and chiefly manufactured goods also declined, due to lower quotations for butter, rubber, vegetable oils and sugar. Domestic farm products and articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods

included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the qualities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86·3; 1917, 84·6; 1918, 82·9; 1919, 81·6; 1920, 81·1; 1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5; 1925, 73·8; 1926, 73·2; 1927, 70·9; 1928, 69·3; 1929, 67·3; 1930, 65·5. The figures since 1914 published previously have been revised, more cities being included.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report

(*Continued on page 464*)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

*Prior to 1926 number of commodities was 236.

(*Continued from page 456*)

Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73·8; 1924, 72·2; 1925, 69·9; 1926, 68·7; 1927, 68·2; 1928, 67·1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98·3; 1915, 98·1; 1916, 96·3; 1917, 100·7; 1918, 107·4; 1919, 111·1; 1920, 125·4; 1921, 143·6; 1922, 140·6; 1923, 135·7; 1924, 134·6; 1925, 131·6; 1926, 131·1; 1927, 129·4; 1928, 127·8. Natural gas 1913, 100; 1914, 107·0; 1915, 112·5; 1916, 112·5; 1917, 113·9; 1918, 114·0; 1919, 116·1; 1920, 125·1; 1921, 137·6; 1922, 163·2; 1923, 163·0; 1924, 162·2; 1925, 179·3; 1926, 172·4; 1927, 165·9; 1928, 158·6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906, 107·5; 1907, 108·8; 1908, 106·9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106·6; 1913, 100·0.

Retail Prices

Beef prices showed little change, shoulder roast averaging 23·2 cents per pound in March as compared with 23·1 cents in February, while round steak and rib roast were unchanged, the former at an average price of 31·4 cents per pound and the latter at 29 cents per pound. Veal advanced in the average from 25·1 cents per pound in February to 25·6 cents in March. Mutton was also slightly higher at an average price of 31·5

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%. † Revised.

cents per pound. Fresh pork rose in price from 30·1 cents per pound in February to 30·6 cents in March. Fresh halibut was up from 31·2 cents per pound to 31·6 cents.

Eggs were again substantially lower, fresh averaging 52·1 cents per dozen in March, as compared with 59·7 cents in February and 64·4 cents in January, and cooking averaging 45·8 cents per dozen in March, 51·8 cents in February and 52·1 cents in January. Lower prices for milk were reported from Stratford, Port Arthur and Fort William. Butter showed a slight seasonal fall, dairy being down from 42·2 cents per pound in February to 41·6 cents in March and creamery from 46·4 cents per pound in February to 45·4 cents in March. Cheese was slightly higher at 32·8 cents per pound.

Bread was unchanged at an average price of 7·8 cents per pound. Tea was slightly lower at 68·5 cents per pound. Anthracite coal showed little change at an average price of $16.23 per ton. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

During March wheat prices declined to the lowest level which had prevailed since May, 1924, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging $1·062 per bushel as compared with $1·174 in February. The low quotation for the month was $1·00⅞ reached on the 13th. The decline was said to be due to the poor export demand and to the announcement made by the Federal Farm Board of the United States at the beginning of the month that it was withdrawing from market operations. Coarse grains also were lower, western barley being down from 50·8 cents per bushel to 46·6 cents; American corn from 97·3 cents per bushel to 94·8 cents; flax from $2.50 per bushel to $2.44; western oats from 59·5 cents per bushel to 55·6 cents; and rye from 72·6 cents per bushel to 60·5 cents. Flour was down from $8.20 per barrel to $7·926. Rolled oats at Toronto advanced from $3.45 per ninety pound bag to $3.55. Bran and shorts were substantially lower, the former at Montreal being down from $34.87 per ton to $31.94 and the latter from $36.87 per ton to $33.94. Raw sugar at New York declined from $2 per hundred pounds to $1·906 and refined at Montreal from $5.27 per hundred pounds to $5.08. Ceylon rubber declined from 15·8 cents per pound to 15·3 cents. In live stock prices good steers at Toronto advanced from $9.78 per hundred pounds to $10.20. Calves at

Toronto declined from $14.51 per hundred pounds to $13.65, hogs from $14.09 per hundred pounds to $13.50, and lambs from $12.45 per 100 pounds to $11.86. Creamery prints at Montreal declined from 39 cents per pound to 37·3 cents, at Toronto from 40 cents per pound to 38·5 cents and at Winnipeg from 43 cents per pound to 40 cents. Fresh eggs showed a substantial seasonal fall, the price at Montreal being down from 49·3 cents per dozen to 36 cents and at Toronto from 49·5 cents per dozen to 34 cents. The decline in raw cotton at New York continued, the price in March being 15·179 cents per pound, as compared with 15·64 cents in February. Raw silk was down from $5.05 per pound to $4.95. The price of spruce lumber showed a decline ranging from $1 to $3 per thousand feet. Steel plates were down from $1.80-$1.90 per hundred pounds to $1.80-$1.85. In non-ferrous metals copper was unchanged at $19.75 per hundred pounds. The price of tin fell from 43·75 cents per pound to 40·75 cents, the lowest reached since 1922. Lead was down from $6·425 per hundred pounds to $5.95, while zinc averaged $5.55 per hundred pounds, the lowest price reached since 1914. Crude oil was down from $3.20 per barrel to $2.95. The price of shellac fell from 30½ cents per pound to 27·9 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924 = 100, was 76·9 for February (as compared with 78·8 in January), a decline of 2·4 per cent for the month, and the lowest index number recorded for any month since this index number was started in 1920. Compared with January, every one of the ten groups was lower, the greatest falls being in cereals, cotton and wool. The prices of articles in the cotton and woollen groups now average about 40 per cent lower than in 1924.

The *Economist* index number, on the base 1927 = 100, was 84·2 at the end of February, a decline of 2·2 per cent for the month. As compared with the end of January, the cereals and meat group declined 4·3 per cent, due to substantial declines in wheat, flour, barley and rice. The four other groups, which are "other foods," textiles, minerals and miscellaneous commodities, were also included in the general decline.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877 = 100, was 104·8 at the end of February, a decline of 1·7 per cent for the month, and a decline of 12·7 per cent from the price level at the same date a year ago. It is the lowest monthly figure recorded since March, 1915. Animal foods was the only group showing an advance, which was due to higher prices for beef. All other groups declined, the principal fall being one of 7·6 per cent in vegetable foods, chiefly wheat, oats and potatoes. Groceries fell 4·8 per cent due partly to lower prices for coffee.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914 =100, was 161 at March 1, a fall of 1·8 per cent for the month, due to lower food prices. Substantial reductions were noted in the prices of eggs, flour and bread, butter, potatoes and fish. Rent, clothing, fuel and light and sundries were unchanged.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Welfare, on the base April, 1914 = 100, was 808 for January, as compared with 823 for December, which is a decline of 1·8 per cent from the January level. Only three of the seventeen groups showed advances over the previous month. These were petroleum and its products, glass products and chemical products. Foods and textiles each fell 6 per cent.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 129·3 for February, a decline of 2·3 per cent from January. The decline extended to all groups of commodities with the exceptions of rubber, chemicals and artificial fertilizers. Agricultural products were 4·8 per cent lower, the greatest fall being in fodder, which amounted to 10·1 per cent, although all other classes of agricultural pro-

(*a*) Quarter beginning in specified month. (*b*) Average for year. (*c*) Figure for previous month. (*d*)Following month. (*e*) Middle of month. (*g*) First of month. (*h*) End of month (*j*) Monthly average. (*k*) For 1920 and 1921, 76 quotations are included, and from January, 1922, 100 quotations. (*l*) New series. (*m*) New official index number, Labour Office. (*n*) Until end of 1926, "Gosplan." (*o*) New series based on 38 imports and 27 exports. (*p*) Revised series. (*q*) Since date of stabilization, gold index.

(Continued from page 466)

ducts were also lower. Among industrial raw materials and semi-manufactured goods, textiles showed the greatest drop, which was 5·9 per cent.

Cost of Living.—The official cost of living index number, on the base 1913-1914 = 100, was 150·3 for February, as compared with 151·6 for January. The decline was due chiefly to lower food prices, as the slight reductions in clothing and sundries were offset by equally small advances in rent and heat and light.

Australia

Wholesale Prices.—The Melbourne index number, on the base 1911 = 1000, was 1760 in December, as compared to 1804 in November and 1832 in October. The decline took place chiefly in agricultural produce, dairy produce and meat. Other groups varied only very little in this period.

British India

Wholesale Prices.—The index number of wholesale prices in Bombay, on the base July, 1914 = 100, was 141 for December, as compared with 143 for November and 146 for October. All groups declined from the November level with the exceptions of hides and skins which were higher, and textiles other than cotton, also metals, which two groups were unchanged. Foods showed the greatest drop, and all of the four sub-groups were included in this movement.

Cost of Living.—The working class cost of living in Bombay, on the base July, 1914 = 100, was 147 for January, a fall of three points from December, due chiefly to a drop in food prices. Clothing was slightly lower, while fuel and lighting and house rent were unchanged.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, on the base 1926 = 100, was 92·1 for February, a fall of 1·4 per cent from January, which is, with the one exception of January, 1922, the lowest index number recorded since October, 1916. Every one of the main groups was lower in February than in January. The greatest drop was in farm products, amounting to 3 per cent. Of the 550 commodities included in the compilation, 201 were lower than in January, 286 were unchanged and only 63 were higher.

The *Annalist* index number, on the base 1913 = 100, was 137·4 for February, a decline of 1·7 per cent from January. All groups showed reductions, with the exception of the building materials group which was slightly higher. Substantial declines took place in farm products, food products, textile products, fuels and miscellaneous commodities, with lesser declines in metals and chemicals.

Dun's index number, showing the estimated cost *per capita* of a year's supply of commodities in wholesale markets, was $179·294 at April 1, which is not quite a one per cent decrease from March 1, and which continues the steady decline since October 1. Although all of the seven groups were included in the general decrease, there was no great change in any one group, the most marked being a fall of 1·8 per cent in breadstuffs.

Cost of Living.—The index number of the National Industrial Conference Board, on the base July, 1914 = 100, was 158·8 for February, a decline of one per cent from January. Each group was lower than for January, and the total cost of living lower than for any month since the year 1923.

During the month of March a total of 5,326 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 35 of which were fatal cases; in Schedule 2 industries 351 were reported including 4 fatal cases; and 339 Crown, 3 of which were fatal, were reported during the month, making in all 6,016, of which 42 were fatal.

A new edition of "Factory and Workshop Orders", containing the statutory orders relating to Factories and Workshops and other places under the Factory and Workshop Acts, 1901 to 1929, which were in force in Great Britain on July 5, 1929, was recently published by the Home Office.

The board of trustees administering the unemployment fund maintained by the Amalgamated Clothing Industry for the benefit of its members, appropriated at its meeting in March the sum of $100,000 for clothing workers in New York who were then unemployed. The Labour Gazette, October, 1928, page 1041, outlined the plan for unemployment insurance reached by a joint agreement between the clothing manufacturers and the Amalgamated Clothing Workers which has created a $1,000,000 fund for the use of employees in the three cities named who are thrown out of work during slack seasons or times of industrial depressions. The fund is maintained by joint contributions from employers and employees.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Appeal to Privy Council Granted in Matter of Public Importance

A report of the judgment of the Manitoba Court of Appeal in the case of Young versus the Canadian Northern Railway Company was given in the last issue of the Labour Gazette, page 355. This judgment dismissed the appeal of the plaintiff against the decision rendered in the Court of King's Bench at Winnipeg last July by Mr. Justice Dysart (Labour Gazette, July, 1929). The plaintiff later applied in the Court of Appeal for leave to appeal *per saltum* (that is, passing over the Supreme Court of Canada) to the Judicial Committee of the Privy Council from the judgment of that Court confirming the judgment of the court of first hearing. The Court granted the application, holding that the question involved in the proposed appeal was one of great general and public importance. As, however, the plaintiff had established his domicile abroad, it was held that he should be required to give security for the cost of the trial and of the appeal to the Court of Appeal, as well as the usual security on appeals to the Judicial Committee.

Chief Justice Prendergast, who delivered the judgment of the Court, said:—

"This is an application by the plaintiff for leave to appeal *per saltum* to the Judicial Committee of the Privy Council from the judgment of this Court dismissing his appeal from the dismissal of his action in the Court of King's Bench. He sues for suspension amounting to dismissal from his employ as machinist in the defendant's yards, and consequent loss of wages and of seniority among his co-employees. The action is wholly based on an agreement known as Wage Agreement No. 4, which was negotiated by the Canadian War Board representing the defendants and other railways, with a widespread labour union known as Division No. 4. The plaintiff never belonged to Division No. 4, but found employment with the defendants by virtue of their shops being open shops and had been so employed for several years when suspended. Agreement No. 4 is a body of rules governing hours of labour, rates of wages and general conditions of employment in the railway shops.

"The rule upon which the plaintiff particularly relies is as follows:—

Rule 27. When it becomes necessary to make a reduction in expenses * * * the force * * * shall be reduced by dispensing with employees with less than six months' continuous service* * * . In the restoration of forces, senior men laid off will be given preference of re-employment * * * .

"Rule 35 provides that should any employee subject to the agreement believe he has been unjustly dealt with, the case shall be taken to the foreman, etc., by the local committee, which is a committee chosen by the men in the particular shop from among themselves. The fact is that in this case the local committee refused to take up the plaintiff's grievance and carry it higher up.

The learned trial judge dismissed the action on the ground that as the plaintiff never was a member of Division No. 4, he is not privy to the agreement and so cannot claim any seniority or other rights under it. In this Court, three judges constituting a majority, held that the agreement was unenforceable even by members of Division No. 4, on the ground of want of mutuality as it imposes no obligation whatsoever upon the men. The two other members of the Court, while agreeing that the appeal be dismissed, did so on the ground that assuming the agreement to be enforceable and available to the plaintiff although he be not a member of Division No. 4, he must adopt it in its entirety and particularly with reference to Rule 35 by virtue of which his grievance was committed to the local committee who refused to carry it further. . . .

"Besides the further fact that all the railways of Canada, including the two systems that span this vast country from ocean to ocean, are operated under Agreement No. 4, or similar agreements, it does not seem necessary to add anything to the statement of the case and the judgment of our highest provincial Court that the latter is altogether unenforceable as above set forth, to conclude, with respect to the present application, that the matter involved in the proposed appeal is one of great general and public importance, as provided in the same Rule, and ought as such to be submitted to His Majesty in Council for decision. . . .

Young versus Canadian Northern Railway Company—Manitoba 1930 (1) Western *Weekly Reports*, page 764.

Non-Member is not covered by Trade Union Agreement

A decision in Great Britain recalling one of the issues raised in the preceding case, Young versus Canadian Northern Railway Co., was reported in a recent issue of the *Post* (the organ of the Union of British Post Office Workers), in which the judge ruled that as the

plaintiff did not belong to the recognized trade union which had negotiated the rates of pay in operation, he was not entitled to claim those rates of pay.

The case was one where a railway employee in Ireland sued the Great Southern Railway Company for £140 for work alleged to have been done as a relief work, whereas he was only paid at his ordinary rate. In reply to counsel for the company, the plaintiff admitted that he had belonged to the union for one month only, and that three years ago.

In support of their case, the company quoted a section of the Railways Act, 1924, which reads: "From and after the passing of this Act the rates of pay, hours of duty, and other conditions of service of railway employees shall be regulated in accordance with agreements made or to be made from time to time between the trade union representatives and such employees on the one part, and the railway companies and other persons by whom they are respectively employed on the other part."

One important consequence of the judge's decision in this case is that no railway employee can establish any claim to the existing conditions which have been fixed by the railway trade unions and the company unless he is a member of a recognized railway trade union.

Compensation Due to "Sharesman" in Nova Scotia

A fisherman employed in a vessel owned by a fishing company in Nova Scotia was injured on April 7, 1928, in the course of his work. He was a "sharesman" as described in section 96 of the Workmen's Compensation Act, which reads as follows:—

96. In respect to the industry of fishing, a person who becomes a member of the crew of a fishing vessel referred to in section 92 under an agreement to prosecute a fishing voyage or voyages in the capacity of a sharesman, or who is described in the Shipping Articles as a sharesman, or who agrees to accept in payment for his services any share or portion of the proceeds or profits of the venture, with or without other remuneration, shall be considered and deemed to be a workman within the meaning of this Part 1928, c. 42, s. 10.

The County Court Judge, who heard the case for the purpose of determining the compensation (if any) to which the injured workman was entitled, fixed the average earnings of the workman, on which compensation was to be based, at $25 a week, or $1,300 a year. Application was then made by the company in the Nova Scotia Supreme Court, for a write of *certiorari* to remove this decision into court, the ground of the application being that the County Court judge had no jurisdiction to order that the compensation in question should be based on average earnings of $25 per week, but that he was bound by section 98 of the Act to calculate the compensation on earnings of $780 per year. Section 98 reads as follows:—

98. A member of the crew of such ship, who is remunerated for his services in the manner mentioned in section 96 hereof, shall, in case of accident where the compensation payable depends upon the earnings or average earnings of such workman, be deemed to earn wages at the rate of $780 a year. 1928, c. 42, s. 10.

The County Court judge, in his decision, had stated as follows:—

"It is contended that under this section the wages must be taken to be fixed at $780 per year and that the compensation payable would be 55 per cent of this amount under the relevant sections of Part 1 of the Act. Sections 42 and 43 of Part 1 of the Act which has to do with workmen other than fishermen fix compensation on the basis of 'actual earnings.' Section 42 further provides for a minimum compensation and s. 45 provides for a maximum of $1,200 a year. That is to say, compensation is based on a principle which recognizes that as some workmen do earn more than others the compensation in case of accident should vary accordingly. That is fair and equitable. While I can readily understand that there might be a different principle invoked in the case of compensation payable to fishermen here there is no principle at all, if I am to accept the contention made. There is nothing but an arbitrary rule which disregards earning capacity and places all applicants in the same class. I do not think this could have been the intention of the legislature. Nor have the words 'shall.....be deemed' an inflexible meaning; nor is the meaning always of a conclusive character, and the legislature's intention must be gathered from a consideration of the whole Act. Accordingly, 'deemed' has time and again been construed as 'presumed till the contrary is shown.'"

In the Supreme Court Mr. Justice Ross commented on the judgment of the lower court as follows:—

"The judge decided on the authority of *Hickey v. Stalker,* (1924) 1 D.L.R. 440, and the cases therein cited, that the words 'shall .....be deemed' used in the above section, really mean 'deemed until the contrary is proved' and that it was open to the workman to come in and establish that he was in fact earning more than the amount mentioned in

the statute, and it was on that theory that he fixed the average earnings of Cohoon at $25 per week. With all respect, I cannot agree with that view. . . .

"I cannot see anything in the Act or in its general scheme that would lead me to interpret those words other than in their ordinary and natural sense and holding that view, I am of opinion that the section is conclusive on the question of average earnings. . . .

"I cannot see that either injustice or absurdity arises from the meaning I have given the words. If the legislature intended the words to mean what counsel for the workman contends they mean, it would have been easy to make it perfectly plain, as was done in other legislation. . . .

"A great deal may be said in favour of the construction I have adopted. It is true that it may work a hardship, more apparent perhaps than real, on the sharesman who earns more than $780 per year, but it would be infinitely more distressing in the case of a sharesman who, owing to a bad season or a series of bad seasons, in case of accident, would only receive compensation based on an average earning of say $100 or less, for it must be remembered that if a workman can come in and show that he earned more than $780 then it is equally open to the employer to come in and prove that another workman earned much less for there is no minimum amount fixed in case of temporary total disability.

"It seems to me there is another difficulty in the way of the claimant. If, as his counsel contends, the words of s. 98 mean that the average earnings are only *prima facie* $780 per year, then he is driven back to s. 45 where the maximum rate of earnings, on which compensation is to be based is $1,200 per year. The rate fixed by the County Court judge is $1,300 per year, which is in excess of the maximum sum mentioned in the statute. Whatever view therefore may be taken I think the Judge had no jurisdiction to make the order complained of."

The Supreme Court therefore granted the writ, the judgment and order complained of being quashed without further order.

Maritime Fish Corporation versus Cohoon, Nova Scotia (1930) 1, *Dominion Law Reports,* page 809.

Province has Jurisdiction to Regulate Marketing

The judgment of the British Columbia Supreme Court in the case of Rex versus Chung Chuck (British Columbia), was outlined in the Labour Gazette, January, 1929, page 112. The defendant was convicted under the Produce Marketing Act of unlawfully marketing potatoes without having obtained the required permission in writing of the Mainland Potato Committee of Direction. Appeals by the defendant and another were subsequently brought in the Judicial Committee of the Privy Council in pursuance of leave granted to the appellants by the British Columbia court of appeal. The Privy Council dismissed the appeals.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] MAY, 1930 [NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed a decline at the beginning of April, according to returns tabulated by the Dominion Bureau of Statistics from 7,153 employers of labour, each with a minimum of 15 employees, representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 941,427 persons, as compared with 961,182 in the preceding month. The employment index declined from 110·2 on March 1, to 107·8 at the beginning of April, as compared with 110·4, 102·3, 97·4, 92·5, 88·3, 90·4, 88·7, 81·8 and 85·1 on April 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The average number of workers employed in 1926 by the reporting firms forms the base, equal to 100, upon which these index numbers are computed.

At the beginning of April, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions was 10·8 compared with unemployment percentages of 11·5 at the beginning of March and 6·0 at the beginning of April, 1929. The April percentage was based on the reports furnished to the Department by 1,765 labour organizations embracing a membership of 211,864 persons.

The reports received by the Department of Labour from the offices of the Employment Service of Canada showed that the volume of business during March, as indicated by the average daily placements effected, was slightly less than that of the previous month and also recorded a decline from the daily average shown during the corresponding month a year ago.

The average cost of a weekly family budget of twenty-nine staple foods was $11.24 at the beginning of April, as compared with $11.67 for March; $11.01 for April, 1929; $10.87 for April, 1928; $10.80 for April, 1927; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for May, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 90·7 for April, as compared with 91·9 for March; 94·1 for April, 1929; 98·3 for April, 1928; 97·3 for April, 1927; and 101·2 for April, 1926.

The loss in working time caused by industrial disputes in Canada in April was less than the corresponding loss in the preceding month or in April, 1929. Nine disputes existed at some time during April, 1930, involving 280 workers, and resulting in the loss of 3,834 working days. Corresponding figures for March, 1930, were: three disputes, 1,583 workers, and 5,484 working days; and for April, 1929, thirteen disputes, 2,369 workers, and 24,288 working days.

Industrial Disputes Investigation Act

During April the Department received a report from the Board of Conciliation and Investigation in connection with the dispute between the Canadian Pacific Railway Company and its clerks, freight handlers, etc. A minority report in this case was also received from the employees' representative on the Board. Two new applications were received during the month, and a Board was established in connection with a dispute between the Shipping Companies at Halifax, Nova Scotia, and the longshoremen. The text of the reports, and full details concerning the proceedings under the Act during the month, are given on page 490.

Combines Investigation Act

Court proceedings in the case of the Amalgamated Builders' Council and related organizations were commenced in April through the laying of charges before the police magistrates of Windsor and London, Ontario. The prosecutions are being undertaken by Messrs. A. G. Slaght, K.C., and J. C. McRuer, K.C., counsel appointed by the Minister of Justice. Further reference is made to these proceedings on another page of this number of the LABOUR GAZETTE.

A decision by Mr. Justice Orde, declaring that proceedings before a commissioner appointed under the Combines Investigation Act are "absolutely privileged," is reviewed in the section of this issue entitled "Recent Legal Decisions Affecting Labour." The same section contains a decision by Mr. Justice Middleton in another case arising out of the recent investigation, declaring the federal Trade Unions Act to be *ultra vires* of the Dominion Parliament.

Conciliation and arbitration in the Netherlands

The Secretary of the Official Commission of Conciliation for Labour Disputes in the Netherlands recently published an analysis of five years' experience of the Industrial Disputes Act of 1923. The Act makes provision both for the prevention and for the settlement of industrial disputes. The provision for the prevention of disputes, by which the two parties agree to ask the official conciliator to assist them in drawing up an agreement without any question of a strike or lock-out arising, has been put into operation only eight times during the five years. The sections of the Act relating to the settlement of industrial disputes make provision for inquiry and arbitration as well as for conciliation. During the five years under review, there has been no instance of recourse to inquiry and only two cases taken to arbitration. Conciliation under the Act, on the other hand, has been employed in a considerable number of cases. The Act lays down that the official conciliators (of whom there are four) should confine themselves to gathering information on the matter in dispute and, in agreement with the parties, set up a conciliation council or nominate a single conciliator. In point of fact, no council of conciliation has been set up, and in only two cases have other people been appointed as conciliators. The usual procedure has been, in practice, for the official conciliator to deal with the case himself.

During the five years (April 16, 1924, to December 31, 1928) to which the study relates, the official conciliators had under consideration some 400 industrial disputes. In 184 cases they thought fit to intervene. In 67 of the disputes thus dealt with, the intervention of the official conciliator would appear to have shortened the dispute. In 31 cases it would appear doubtful whether the intervention was effective in any way in bringing the conflict to an earlier conclusion. In 85 cases the author of the study considers that the intervention of the official conciliator definitely failed.

New legislation in three provinces.

This issue contains an outline of the labour legislation enacted at the recent sessions of legislations of the provinces of Quebec, Ontario, and British Columbia. An account of this year's legislation in the remaining provinces will appear in the next and following issues. Special attention may be drawn to the Quebec Act providing for the appointment of a commission to study the question of Social Insurance, and to new provisions for regulating the working hours of women and young persons in factories in the province. The most conspicuous new measure in Ontario amends the Mining Act in conformity with the recommendations of Mr. Justice Godson following the inquiry into the Hollinger Mine disaster in February, 1928 (LABOUR GAZETTE, November, 1928, page 1206).

New labour legislation enacted in New Brunswick

The secretary-treasurer of the New Brunswick Federation of Labour issued a circular to the members of the Federation at the conclusion of the recent session of the Provincial Legislature, directing their attention to the labour legislation that had been enacted, the new measures having met several of the proposals previously submitted to the provincial government by the Federation. The circular states that this has been "one of the most outstanding years in this Federation's history," chiefly owing to "the amount of legislation secured in the interests of the workers of the province." The three main social measures enacted this year, as noted in the last issue of the LABOUR GAZETTE (page 361) are the Old Age Pensions Act, the Mother's Allowance Act and the Minimum Wage for Women Act. Another measure that had been desired by organized labour is the Act for the Protection of Children, bringing this branch of social legislation into line with that in force in other provinces. An account of the last convention of the New Brunswick Federation was given in the LABOUR GAZETTE, February, 1930, page 172, and the requests submitted at the subsequent interview with the provincial government were outlined on page 185 of the same issue. The Federation claims some of the credit for this group of new enactments, and acknowledges the assistance rendered by the Joint Provincial Legislative Board of the Railway Brotherhoods, as well as by the Trades and Labour Congress of Canada. An account of the recent session of the New Brunswick Legislature will appear in the next issue.

Progress of old age pensions in Canada.

On another page of this issue will be found a table giving the number of pensioners and the amounts disbursed in old age pensions in the five provinces of Canada in which the Old Age Pensions Act is now fully operative. These details relate to the first three months of 1930, the fiscal year 1929-30, and the whole period since the Act first began to take effect. The number of old age pensioners in Canada on March 31, 1930, was 42,553. The final report of the Nova Scotia Old Age Pension Commission is also outlined on another page of this issue.

Old Age Pensions systems in various countries

The April issue of the *Monthly Labor Review*, published by the United States Department of Labor, contains an article on "Old Age Pension and Insurance Systems in Foreign Countries," this study having been undertaken in view of the movement towards establishing such a system in the United States (LABOR GAZETTE, January, 1930, page 4; March, 1930, page 255). Pointing out that existing systems of old age benefits are of three types, namely, voluntary insurance, compulsory insurance, and public pensions, the writer proceeds to state the main points of difference between these methods of relieving aged persons, as follows:—

"Under a public pension system, aid is given only in case of actual dependency, and then only in accordance with the need of the individual as established to the satisfaction of the administrative agency. The compulsory insurance system has a quite different theory. It seeks to provide that all working citizens shall have laid up for them, against their retirement from industry, an insurance fund which will support them in their old age. The old-age benefits thus received by a retired worker are therefore not dependent upon the degree of dependency or upon proof of need. On the other hand, this system provides only for persons who are or have been workers; it does not cover dependent persons who, for various reasons, may have reached old age without ever having had employment within the meaning of the law."

The compulsory-insurance principle, it is pointed out, has at present the greatest vogue. In general, the public pension system is favored by the British Dominions and the Scandinavian countries and dependencies (except Sweden), whereas the compulsory-insurance system is now in force in the principal industrial countries of Europe, such as Great Britain, Germany, France and Italy.

The article contains extensive tables giving the principal facts concerning the various existing systems. This information includes particulars of the schemes in force in the British Dominions, including Canada.

In Australia, under the law of 1908, there were 139,367 persons drawing pensions in 1928. The pension age for men is 65 years or (60 in cases of permanent disability) for men, and 60 years for women, pensions being limited to those with property valued at not over £400, and with incomes not over £65 a year. The government bears the entire cost of this scheme. The maximum pension is £52 a year, which is reduced £1 for every £10 of property exceeding £50 exclusive of home.

In the Irish Free State, all citizens over 70 years of age with incomes not more than £39 5s. a year are entitled to pensions. In 1925, 116,000 persons representing 58 per cent of the population over 70 years received pensions ranging from 1 shilling to 10 shillings per week, according to the amount of private income. The government bears the entire cost of this scheme.

In Newfoundland, under the law of 1911, needy aged persons over 75 years of age (widows at 65) receive pensions of $50 a year at the expense of the government.

In the Union of South Africa, under the law of 1928 (LABOUR GAZETTE, January, 1929, page 2) pensions are payable to persons over 65 years of age, subject to deductions for income, the amount of pension ranging from £3 to £60 a year according to income. In the early months of 1929 there were 25,524 white, and 8,101 coloured old age pensioners. The union government bears the entire cost of pensions.

Proposals of Social Service Council of Canada

The Social Service Council of Canada, at its annual convention held early this month at Toronto, adopted a resolution to ask the Dominion Government to arrange a conference with the Provincial Governments for the purpose of drafting provincial legislation to give effect to the Washington 8-hour day convention and other conventions adopted by the International Labour Conference of the League of Nations.

The Provincial Governments are to be asked also to establish arbitration boards for the settlement of industrial disputes.

It was further proposed that the National Research Council of Canada should undertake research work into social and economic subjects, but that, if the executive council should

find that this was impracticable, steps should be taken to secure the establishment of a Canadian Council on Social and Economic Research.

Separate Ministry of Fisheries created

On May 2, on the motion of the Prime Minister, the House of Commons adopted a resolution to divide the Department of Marine and Fisheries into two separate departments of the government. In speaking on the resolution Mr. King said: "For some time past it has been felt that the fisheries resources of this country should receive the attention of a separate ministry. Canada is rich in her natural resources of agriculture, fisheries, lumbering, mining and power. From the point of view of value, it is believed that the fisheries resources are second in the list of natural resources. As compared with the fisheries resources of other countries of the world, we have in our deep sea and inland fisheries the largest and most valuable anywhere to be found."

The Prime Minister stated further that "when the two departments are separated, it is contemplated to effect a measure of reorganization in regard to the work of some of the other departments. We believe such a reorganization would be very much in the interests of the country. For example, to-day dredging of rivers and harbours is carried on largely by the Department of Public Works; it is also carried on to some extent by the Department of Railways and Canals. The government has felt that from the point of view of efficiency and economy a much needed improvement would be effected if the work of dredging were concentrated in the department which deals more particularly with marine affairs. At later time there will accordingly be a reorganization of the Marine Department along lines which will enlarge the work of that department in this and other particulars. That department will be able to give its attention more exclusively to marine affairs, while the very important phases of the fisheries industry it will be possible to give much more in the way of attention by having those matters placed under a separate minister. That is the purpose of the present legislation."

Working hours of female retail clerks in Ontario

At a public meeting held at Toronto on April 25, Dr. J. W. MacMillan, chairman of the Minimum Wage Board of Ontario, intimated that the Board was about to issue new regulations governing the working hours of retail store employees. He stated that the regulations would be similar to those already in force in the laundry industry (LABOUR GAZETTE, March, 1924, page 224), providing that the work period for which the minimum wages are paid must not be less than 44 or more than 50 hours a week. Work in excess of 50 hours is counted as overtime and paid for at not less than the minimum wage rates, reckoned on the basis of a 50-hour week. On the other hand work for less than 44 hours a week may be counted as "short time," and paid for at not less than the minimum rates reckoned proportionately to the regular weekly work period in the establishment concerned.

Medical aid under Ontario Compensation Act

The Workmen's Compensation Board of Ontario has published a bulletin containing the surgical fees and other information concerning Medical Aid under the Act. In an introductory note it is pointed out that when the Workmen's Compensation Act was passed in 1914 it made no provision for Medical Aid. This was left to be taken care of by the injured workman himself. In 1917 medical aid not exceeding one month in any case was provided for, and in 1919 this was extended to include all medical aid necessary as a result of the accident. Medical Aid includes medical and surgical aid and hospital and skilled nursing services. It has also been extended to include provision of artificial members and apparatus, with repairs for one year. It extends to all accidents covered by the Act, no matter what the length of disability. Not all employments, however, are covered by this service, but only those in the industries specified in Schedule 1 and Schedule 2 of the Act. These, however, are very numerous, the largest omissions being farming and mercantile occupations. In Schedule 2 industries (including railways, express, telegraph, Dominion telephone, and navigation companies, and municipal bodies, etc., except where transferred to Schedule 1) the employer provides the benefits prescribed by the Act, while in the much more numerous list of industries in Schedule 1 employers pay assessments to the Workmen's Compensation Board to form an accident fund, out of which the Board pays compensation and medical aid; and medical aid accordingly is in Schedule 2 cases to be provided by the employer and in Schedule 1 cases by the Board. However, in all cases where a doctor is not required, first aid and ambulance and transportation to doctor, hospital or home, are provided by the employer at his own expense. The Board up to the present time has left the choice of doctor as far as possible to the workman and

the employer jointly, leaving the field open to all members of the profession, except only where the dealings with any individual doctor have been found unsatisfactory.

The Act provides that the fees for medical aid "shall not be more than would be properly and reasonably charged to the workman if himself paying the bill," and, like the allowance of compensation, they are determined by the Board.

Conference of textile industries in Canada

A conference of representatives of all branches of textile manufacturing and garment and clothing industries of Canada is to be held during the coming summer for the purpose mainly of discussing problems of merchandising and distribution. In announcing the conference the *Canadian Textile Journal* points out that no manufacturing industry in the Dominion is more diversified than textiles in regard both to its wide distribution throughout the country and to the number of its employees. Textile and garment factories exist in numerous urban centres in every province, and are the largest employers of labour with the exception of the agricultural and wood products industries. "It is plain, therefore," the *Journal* continues, "that the industry performs a valuable economic function in the expansion and development of this country, and it is purely from this economic viewpoint that the two great branches of the industry, primary manufacturing and converting, will get together shortly to investigate their problems."

The program of the forthcoming conference will include a discussion of such questions as the abnormal number of commercial failures, particularly in the garment and clothing industries in recent years. The Conference will also discuss the question of compiling adequate statistical information concerning the movement of domestic and imported textiles in distribution, and the use to be made of statistics in relation to the actual sale of merchandise through the wholesale and retail trades. Steps will also be taken further towards a complete physical and economic survey of the textile industries of the Dominion. Committees are already working on the details of the program, which will be announced shortly.

British Columbia Male Minimum Wage Act

Early in April the Male Minimum Wage Board of British Columbia received from caretakers, janitors and night watchmen in the Province an application for the establishment of a minimum rate of wages under the Male Minimum Wage Act, 1929. The petitioners supported their application by a statement of their existing conditions of work, alleging long hours and low wages.

In regard to the application of the drug store employees, a new hearing has been granted by the Board, the British Columbia Court of Appeal having reversed the recent judgment of Mr. Justice Murphy confirming the earlier decision of the Board in regard to this application (LABOUR GAZETTE, March, 1930, page 282). On the first occasion the Board found that the occupation of the applicants, being a "profession," did not fall within the scope of the Male Minimum Wage Act. The Court of Appeal ruled, on the contrary, that the business of drug store clerks is an "occupation" within the meaning of the Act, this ruling opening the way for the granting of a new hearing.

8-hour day measure proposed in Great Britain

A Bill to regulate the hours of work in industrial undertakings has been introduced in the British Parliament by Miss Bondfield, Minister of Labour. The bill is based upon the Washington Hours Convention of 1919. It limits the ordinary working hours of workers in industrial undertakings to eight in any day and forty-eight in any week (the "statutory limits"). Extensions of the limits are allowed as follows:—

(*a*) workers who are employed for less than eight hours on any day of the week may be employed up to nine hours on all or any of the other days subject to the weekly maximum of 48 hours.

(*b*) the hours of shift workers may be arranged so as to average not more than 48 hours over two or over three weeks.

(*c*) the employment of workers upon continuous processes may extend to 56 hours weekly upon an average over three weeks.

For the "statutory limits" of working hours other limits may be substituted on the agreed proposals of organizations of employers and of workers, subject to a weekly average of not more than 48 hours.

The working of 48 hours in a week of five days or less may be permitted subject to the agreement of the workers' organization.

Preparatory and complementary work and essentially intermittent work may be permitted outside the statutory limits.

Overtime may be worked in order to deal with pressure of work which cannot be dealt with during the ordinary working hours of the workers available. The payment for overtime must be at not less than time-and-a-quarter. Overtime must not exceed 32 hours in any

period of 28 days; this maximum may be varied by regulation or order.

The restrictions upon working hours do not apply in case of accidents and other emergencies.

Employers are required to notify workers of their ordinary working hours and to keep records of hours worked.

Clauses 8 and 9 deal with the enforcement of the provisions of the Bill, including the appointment of inspectors and the penalties for contravention.

Before making any order or any regulation relating to the arrangement of working hours, the Minister is required to consult organizations representing the employers and workers who will be affected. No such order or regulation affecting workers to whom Part IV of the Railways Act, 1921, applies may be made unless it is in accordance with the recommendation by the railway companies and the railway trade unions jointly or by the Central Wages Board or the National Wages Board. All regulations and orders are to be laid before both Houses of Parliament.

The Minister is given power to suspend the operation of the Bill in case of national emergency.

The Bill applies to work in mines (except underground in coal mines), in quarries, in factories and workshops of all kinds, upon building and works of construction, at docks and upon warehousing and transport under contract.

48-hour-week in Great Britain

The *Economist*, in its issue of April 12, stated that the three measures of special interest to the trade unions, the ratification of the Washington Hours Convention, the amendment of the Trades Union Act of 1927, and the Factories Bill, were to be delayed much longer than was anticipated by the unions when the Government came into office. "For some time," it is stated, "consultations have proceeded with the officials of the unions, who feared that some of the provisions of the Washington (eight-hour day) Convention might adversely affect their own agreements with employers' organizations. The most serious view of this possibility was taken by the railway unions, whose working-time arrangements for locomotive men and some other grades are of a complicated nature to fit in with operating requirements and the guaranteed week. The draft of the Bill, however, seems to have satisfied the union officials that what they regarded as menaced interests have been fully safeguarded by the interpretation of the clauses of the Convention providing for elasticity in certain circumstances. Agreement has, therefore, been reached, and the draft has also received the approval of the General Council of the Trade Union Congress. When the text is published, it will undoubtedly be submitted to exceptionally close scrutiny by the employers' organizations in the industries affected, and the attitude of their representatives during the discussions at Geneva last year on the question of revision suggests that an effort will be made to rally strong opposition."

The 5-day week in industry in United States

The Industrial Relations Section of Princeton University has published a new memorandum containing statements of opinion on the experience of the five-day week in industry in the United States. These statements are so classified as to bring out the opinions of both employers and workers' representatives on the effects of the short working week on production, economy of operation, workers' leisure, unemployment, and general prosperity. It is pointed out that the most important recent development has been the agreement in the New York building trades in August, 1929, by which 150,000 workers were placed upon a five-day week schedule at a ten per cent advance in wages.

At the last annual convention of the American Federation of Labour it was stated that in addition to building tradesmen, printing craftsmen have the five-day week in a number of establishments. The women's garment unions have the five-day week for 12,000 members, while the men's garment unions have established it for 5,000. The fur workers of Boston, Chicago and New York have the five-day week; also, the cloth hat makers of Milwaukee, New York and Philadelphia, the wood carvers of Boston, New York City and Rochester; the upholsterers in Boston and New York City. Photo-Engravers have the five-day week during summer months and under their agreements will successively increase its application until it extends throughout the year. A number of local unions directly affiliated to the American Federation of Labour particularly the office employees' unions, are also enjoying the five-day week.

A preface to the memorandum shows that the five-day week is not new to industry, although the present emphasis upon it dates back to 1926 only. A survey at the close of that year by the United States Bureau of Labour Statistics indicates that of the employees included approximately thirty-two and three-tenths per cent of those in the men's clothing industry, six per cent of union membership in the building trades, particularly the lathers, painters, and plasterers, and about five

per cent of the newspaper printing trades were working on the five-day week or what was substantially a five-day week.

"The movement," it is stated, "can be understood only as a part of the long struggle to shorten the working period, and many of the arguments for and against its adoption could be duplicated from those used during the years when seventy-two and sixty-eight hours a week were giving way to fifty-four and to the eight-hour day. A new argument, however, is used by those who support the five-day week. This argument, to which Mr. Ford has given wide publicity, is that since wage earners constitute an important part of the market for our industrial products, they must have both leisure and sufficient wages to purchase enough goods to keep industry producing at a rapid rate. In other words, prosperity does not depend on long working hours and low wages, but upon shorter hours and high wages."

Later information shows that the five-day week, which was generally adopted last year in the New York Building trades, has been extended by the decision of the San Francisco Builders' Exchange to apply the shorter week to mechanics employed on building as from January 1 last. Members of the building trades working in factories and shops are excluded from this arrangement. The new schedule makes the whole of Saturday a holiday, and subject to the usual payment for overtime. Slackness in the building industry, which has resulted in some unemployment, was the reason for the innovation.

"Elastic working day" to stabilize employment

In an address before the National Metal Trades Association at its recent convention in New York City, Leonor F. Loree, president of the Delaware & Hudson Railroad, explained how that company had stabilized the employment of its shop crafts and track forces so as to assure them of steady work throughout the year. In 1922, following the strike of railroad shop men, the management, he said inaugurated an "elastic work day" which gave the men employment for eight to ten hours a day at the same hourly or piece rates as a six-day week. The plan provided that no new men should be hired until an increase in work required more than sixty hours of labour per week. During the recent slackening of business, Mr. Loree said, not one man lost his job; the problem of curtailing work was solved by the men themselves, who voluntarily went on a five-day week and eight-hour day rather than have any of their associates dismissed. "The operation of our elastic work-day plan has had a marked effect upon the continuity of employment," he declared. "The maximum number of employees in our maintenance branches in 1920 was 10,050 and the minimum 8,136, a variation of 1,914. By 1929, the maximum dropped to 6,118 and the minimum to 5,700 a variation of 418, the labour turnover being reduced by 78·2 per cent."

American Labour Year Book, 1930

The "American Labour Year Book" for 1930 has been published by the Labour Research Department of the Rand School of Social Science (New York) in its annual series. The new volume is concise and well arranged, giving a clear view of the labour situation and of the most significant events of the past year in the United States, and in many other countries. The year 1929 is characterized as "one of the most significant since the end of the World War," particularly in regard to the bringing together of the questions of rationalization and unemployment in some of the principal industrial countries of the world. The "labour diary" deals with the history of the past year under the following aspects: industrial and social conditions; trade union organization; strikes and lockouts; labour politics; labour legislation; court decisions affecting labour; civil liberties; workers' education; labour banking and insurance; co-operation; and international relations of labour. The Year Book also contains a chapter on the labour movement in other countries, and concludes with a list of books published during the past year on labour and economic questions, and an International Labour Directory. It contains a full index which adds to its value as a work of reference.

Additional unemployment benefits in Great Britain

The unemployment benefit schemes instituted by employers in Great Britain to supplement the government contributory system are described in the March issue of the *International Labour Review*, published by the International Labour Office at Geneva. On the general subject of unemployment insurance the writers point out that "in Great Britain, at least, the need for such insurance is no longer seriously contested. As a contribution to the welfare and efficiency of the worker, as a guarantee of social stability, as a means of reducing the disastrous waste of human capital which prolonged unemployment involves, it is recognized to be indispensable."

The State scheme, it is stated, is designed to afford merely a necessary minimum standard of protection against the hazards of unemployment. "More than this the State does not

at present attempt to do. Where individual firms or industries, or groups of workers or employers, wish to establish higher standards, or institute supplementary schemes designed to supply their own special needs, they are free to take such steps as they think fit. The State raises no obstacles, and is even prepared, in certain directions, to assist. The number of cases in which special schemes have been successfully instituted is proof at once of the readiness of progressive employers to take the initiative in this direction, and of the desirability of leaving them, as the British unemployment insurance system has in fact left them, the freedom to do so. . . .

"Although a considerable variety of industries is represented in the list of additional benefit schemes, the actual number of workers covered can scarcely be more than fifty or sixty thousand—a number which may seem insignificant by comparison with the twelve millions covered by the national unemployment insurance scheme. Additional benefit schemes are, however, a new development, and their significance is not to be measured, at this stage, by any such numerical ratio. Their chief importance lies in the solution they offer to one of the most difficult problems of unemployment insurance—the problem of raising the skilled worker's benefit to what might be termed as 'efficiency level.'"

The writers comment upon the substantial nature of the benefits paid by the majority of the schemes now in effect. In several cases the aim is to ensure that the worker when unemployed shall enjoy an income almost as great as he can earn while at work. "There is a notable difference" they point out, "between this and the attitude of critics who condemn the low rate of benefit provided by the State scheme as a 'dole' which is excessive in amount and demoralising in effect. The difference is due in part, no doubt, to a realization that it is the unemployment, and not the 'dole', which tends to demoralize."

The additional benefit schemes are chiefly important, it is considered, as a device, capable of more extensive application, for paying the deserving—and, in particular, the skilled worker—more adequate benefits without paying the undeserving too much. "The inability of the national system of compulsory flat-rate insurance to provide the unemployed skilled worker with an income sufficient to maintain his standard of living must, it is clear, be recognized as a serious defect. In the interest of the community, no less than of industry itself, some machinery must be devised to eliminate the waste of human capital thus involved."

Centralized control of rationalization schemes in Great Britain

On April 15, the "Bankers' Industrial Development Company" was organized in London. The *Economist*, in its issue of April 19, describes this new organization for developing plans for financial assistance to industry as follows:—

"The object of the company is to examine schemes of rationalization submitted by the basic industries of the country, and, as an indication that it is not the purpose of the new concern to enter into competition with the ordinary business of existing financial institutions, it is intended that the new company shall not deal with individual companies but only with industries as a whole, or with regional sections of industries. If schemes are approved, the good offices of the company will be available for assisting the industry to secure the necessary capital; but this will be done through existing agencies, and not by the new company itself. Its purpose is rather to ensure that if satisfactory schemes are framed they will have the co-operative assistance of the City. The approval of the company will be evidence that the scheme in question has been endorsed by the best expert advice which the company can secure, and that the demand for capital that the scheme involves, without being guaranteed in advance, will have the support of the institutions most competent to ensure that it will be forthcoming. It is hoped, therefore, that the formation of the company will encourage industries to work out satisfactory plans. It has, however, been clearly indicated that it is not the intention of the promoters of the scheme to find money for buying out old concerns, but that the new capital found shall be used for the reconstruction of plant and for placing our basic industries in the forefront as regards technical equipment and organization. . . .

"Whether the new company will hasten the process of rationalization, time alone will show. The new concern can never be in the position that joint-stock banks to-day occupy in relation to many industrial undertakings, namely, that of creditors; and it cannot, therefore, exercise the financial pressure which the joint-stock banks are able to do. Nor can it be said, speaking broadly, that schemes of rationalization have hitherto been held up for want of financial backing. The long delay has rather been due to personal difficulties, the absorption of British industrial leaders in their own particular problems, their lack of experience of big associations, and traditional individualism. These hindrances

are breaking down under pressure of circumstances. . . . Things are moving in the direction which the founders of the company have in mind; if it can smooth away financial difficulties and ensure that schemes of rationalization are based upon the all-important condition of more economical production, it will have fulfilled a role of the utmost national importance."

Unemployment and monetary fluctuations

The Stable Money Association, which was formed last year with headquarters at New York (Labour Gazette, December, 1929, page 1332) has reprinted the report presented to the 12th session of the International Labour Conference, Geneva, 1929, on "Unemployment and Monetary Fluctuations." Copies of the reprint will be forwarded, free of charge, upon request made to the Association (104 Fifth Avenue, New York City). The report shows that "unstable conditions of employment follow from the alternate rise and fall in the general price level," and that "fluctuations in the purchasing power of gold are indisputably a cause of unemployment." A leaflet prepared for the Association by Mr. Norman Lombard, its executive director says:—"Let it once be publicly recognized by industrial leaders and bankers that the stabilization of our money would work strongly toward the elimination of unemployment—so far as this is due to business instability—and they will regard such stabilization as one fundamental to economic progress and prosperity." It is pointed out that any safeguard against unemployment is a corresponding insurance of industrial and social soundness and peace. Hence it is proportionately worthy of practical endeavour.

The Postmaster General announced in the House of Commons on May 9 that in future all contracts for the collection of mail from letter boxes and for parcel delivery in the city of Toronto, would contain the fair wage and eight-hour day clause. Mr. Venoit said that the new contracts now being put up for tender called for an 8-hour day and a 44-hour week, instead of the former 10-hour day. Under the new arrangements, cities having similar delivery contracts to that of the city of Toronto will adopt the eight-hour clause, and the wages prevailing in the district will be paid for that class of work.

The Miners' Federation of Great Britain has rejected the colliery owners' proposal for a variation in the hours of work embodied in the Coal Mines Bill. The owners wanted, instead of the working shift of seven hours and a half, a total limitation of hours to forty-five a week or ninety a fortnight, with a less rigid limitation of the length of each shift. The proposal they finally put forward was that the Bill should be amended so as to permit the working of an eight-hour shift on five days of the week, with a five-hour shift on Saturday—making up the same weekly total as the hours now in the Bill. This the Miners' Federation has now rejected. It is now assumed that the Bill will go through the House of Lords unchanged in respect of the hours prescribed.

Child welfare should be regarded as being a branch of general social welfare, and can be carried forward only in connection with general schemes for the benefit of the whole community. This opinion is expressed in the 17th annual report of the Director of Child Welfare of Nova Scotia for the year ending September 30, 1929. The director looks for progress in the future in the public recognition of this principle. "Our Children's Aid Societies must broaden their work and increase their staff with trained social workers qualified to do family and community social work in rural districts." Among other provincial measures affecting children in the province the Director makes a strong appeal for the enactment of a Mothers' Allowances Act, as recommended by the Royal Commission in 1921 (Labour Gazette, October, 1921, page 1235). The report contains a review of the work of the Children's Aid Societies at the different centres in the province.

A Reading Course in Labour Relations

The American Library Association has published an essay on "Capital and Labor," by Mr. John A. Fitch, of the New York School of Social Work, being a brief introduction to a suggested course of reading on this subject. The books recommended in the course are as follows:—"Mainsprings of Men," by Whiting Williams; "The Labor Problem," by James Arthur Estey; "The Labor Problem," by Warren B. Catlin; "American Labor Dynamics," J. B. S. Hardman, editor; "The New Leadership in Industry," by Sam A. Lewisohn; "A Theory of the Labor Movement," by Selig Perlman; "The Causes of Industrial Unrest," by John A. Fitch.

The "course" forms part of the "Reading with a Purpose" series, issued by the Association as part of its educational program and not for profit.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of April was reported by the superintendents of the Employment Service of Canada to be as follows:—

Backward weather had retarded spring farm work in the province of Nova Scotia, although some progress was being made. Fishing catches were reported as good, and preparations were being made for lobster fishing at the first of May. Lumber operations in the woods were quiet, with river-driving just commencing. Such construction work as was being carried on throughout the province, chiefly centering in Halifax, was progressing rather favourably. The coal mines showed fairly good production, with prospects rather favourable. Manufacturing, including the iron and steel group, was normally busy. In the women's divisions there was an increased demand for women domestic workers.

As in Nova Scotia, spring farm work in New Brunswick was being delayed by backward weather. Although fishing had been interfered with by storms very heavy catches were reported. Log driving had already started, and some men were being placed for this work. Manufacturing showed practically an unchanged condition. Building and construction reported renewed activity at Moncton and Saint John. Transportation was fairly brisk. The demand for women domestic workers was reported as normal.

With the advent of spring, Quebec employment offices showed an increased number of orders for farm workers. Orders for logging drivers reported at the offices in the province were substantially increased. Manufacturing activity in the different industrial centres showed a moderate though noticeable, improvement in activity. The building trades, owing to the return of spring weather conditions, showed acceleration in employment, and many orders for workers, both skilled and unskilled, were being listed. Trade, retail and wholesale, showed improvement, with good prospects. The usual shortage of women domestic workers was becoming noticeable once more.

With a sufficient supply of suitable applicants available at the employment offices throughout Ontario, an increase in the number of farm orders was noted. The commencement of river driving in the northern sections of the province means the opening up of work, which will absorb quite a number of applicants who have been waiting for such employment. The mining industry remained normal. The manufacturing industries showed a tendency toward quietness, and no upward swing was indicated. Fairly large numbers of men were available for employment in the building and construction trades, but this situation was being relieved at a number of centres where work of this character was opening up. The demand for women domestic workers remained rather steady.

Manitoba reports showed that seeding had progressed very favourably, and vacancies notified for farm help declined accordingly. There was scarcely any demand for workers for the logging industry, or for the mining industry in the northern part of the province. Railway construction work was opening up and early orders were being received. Building construction in Winnipeg was running behind last year in volume, although the amount of work in prospect was fairly good. Orders for casual labour were more than outnumbered by suitable applicants available. An increase in placements in the female domestic section was shown.

With the approach of the peak season for seeding, requirements for farm orders were on the decrease, and applicants were relatively plentiful. Some additional workers were being placed on railway construction. Otherwise, building construction showed the usual seasonal upward tendency, although many tradesmen remained idle. Even though the demand for labour for casual jobs showed an increase, such positions as were offering were easily taken care of. There was not much activity in the placement of women domestic workers.

In the province of Alberta vacancies for farm help were not numerous, as seeding was well on its way to completion: early advices indicated that crops were off to a good start. Building construction was fairly brisk in the different centres, while building mechanics and labourers unemployed were fairly numerous. Very few orders were being received in the logging group. Demands for general labour were fair, but plenty of applicants were available. The coal mining industry was quite inactive. Vacancies for women domestic workers were not particularly numerous.

A few placements were being made in the logging and allied industries in British Columbia, but no signs of a general or substantial improvement in this group were reported. The metal mining industries of the province continued to operate normally. Some indica-

tions of a revival of activity in the construction line were in evidence, but applicants for such work were fairly plentiful. Manufacturing industries showed practically no change. General conditions as affecting the demand for women domestic workers in this province were improving, largely due to the requirements for workers for summer hotels.

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

EMPLOYERS' REPORTS

Employment at the beginning of April showed a decline which was somewhat larger than that noted on April 1, 1929; this was partly due to unusually large seasonal contractions in logging camps, in which there has been exceptional activity during the past winter. The Dominion Bureau of Statistics tabulated returns from 7,153 firms whose staffs aggregated 941,427 persons, compared with 961,182 in the preceding month. The index number (based on the 1926 average as 100) stood at 107·8, as compared with 110·2 on March 1, 1930, and 110·4, 102·3, 97·4, 92·5, 88·3, 90·4, 88·7, 81·8 and 85·1 on April 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921 respectively. Thus the index at the beginning of April, though lower than one year ago, was considerably higher than in the spring of 1928 or any earlier year of the record.

All provinces except British Columbia reported reduced employment, the losses in Quebec and Ontario being greatest. In the Maritime Provinces, there was a further decrease in employment; manufacturing, mining and construction were slacker and logging showed important seasonal losses, while shipping was decidedly brisker. In Quebec, manufactures showed heightened activity, and mining, transportation and construction afforded more employment, while logging reported very large seasonal contractions. In Ontario, pronounced seasonal losses were shown in logging, while manufactures and construction, transportation and services recorded large increases in employment. In the Prairie Provinces, the decline took place chiefly in manufacturing, logging and mining, the slackness in the last two being seasonal in character. In British Columbia, the greatest gains were in manufacturing, transportation and construction, while mining and logging released some help.

Employment increased in Montreal, Quebec City, Toronto, Ottawa, Windsor and the Adjacent Border Cities and Vancouver, while losses were noted in Hamilton and Winnipeg. In Montreal, iron and steel, electrical apparatus and textile factories and transportation recorded heightened activity, while the fluctuations in other industries were slight. In Quebec, manufacturing, construction and transportation registered the most outstanding gains, while there were only small changes in other industries. In Toronto, considerable increases were registered in manufacturing, notably of iron and steel products. Other groups showed little general change. In Ottawa, there was a small advance, chiefly in manufacturing. In Hamilton, manufacturing afforded heightened employment, but construction released employees. In Windsor and the Adjacent Border Cities, there was pronounced expansion, principally in automobile plants. In Winnipeg, iron and steel plants were more active, but construction and trade were slacker. In Vancouver, the most marked increases were in construction.

An analysis of the statistics by industrial groups shows further improvement in manufacturing, particularly in the iron and steel industry; in addition, lumber, building material, textile and electrical apparatus plants afforded increased employment. Local and water transportation, building, highway and railway construction and services also reported improvement. On the other hand, there were pronounced seasonal losses in logging, and smaller reductions in coal and metallic ore mines and in steam railway transportation and communications.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1930.

TRADE UNION REPORTS

The general trend of employment among local trade unions at the close of March was slightly better than in the previous month, a number of trades and industries showing some opening up of activity due chiefly to seasonal influences. Reports for March were tabulated from an aggregate of 1,765 labour organizations, covering a membership of 211,864 persons, 10·8 per cent of whom were idle at the close of the month contrasted with 11·5 per cent in February. Employment was, however, in lesser volume than in March last year, when the percentage of inactivity stood at 6·0. British Columbia, Quebec, Nova Scotia, Ontario and Saskatchewan unions all reported slight employment expansion when compared with February, while in Alberta, New Brunswick and Manitoba minor declines in activity occurred. A nominally improved situation was reported in Nova Scotia during March when compared with the same month last year, while the remaining provinces reflected less favourable conditions, Alberta unions reporting the most noteworthy curtailment of operations.

A review in greater detail of unemployment among local trade unions at the close of March will be found on another page of this issue.

Employment Office Reports

During the month of March, 1930, references of persons to employment made by the offices of the Employment Service of Canada numbered 24,492, while the placements effected totalled 23,168. Of the latter, the placements in regular employment were 7,287 of men and 3,594 of women, a total of 10,881 while placements in casual work were 12,287. Applications for work reported at the offices numbered 38,686, of which 27,394 were of men and 11,292 were of women workers. Employers notified the Service during the month of 16,193 vacancies for men and 8,454 for women, a total of 24,647. An increase was shown in all transactions when the above figures were compared with those of the preceding month. Vacancies and placements, however, showed a decline from those of March last year, the records for February, 1930, showing 23,175 vacancies offered, 36,223 applications made and 22,073 placements effected, while in March, 1929, there were recorded 27,695 vacancies, 37,104 applications for work and 25,044 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1930, and also for the quarterly period, January to March, may be found elsewhere in this issue.

Building Permits and Contracts Awarded

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during March, 1930, was $13,352,640, as compared with $8,827,870 in the preceding month and with $24,068,018 in March a year ago.

The *MacLean Building Review* states that the contracts awarded for April this year totalled $48,778,600, which is an increase of 12·7 per cent over the volume reported for April, 1929. Of the April 1930 total, $22,291,100 was for business buildings; $10,960,600 was for engineering purposes; $9,631,200 was for residential buildings. The apportionment of the contracts awarded during April by provinces was as follows: Quebec, $18,624,500; Ontario, $18,021,200; Alberta, $4,938,700; Saskatchewan, $2,567,100; British Columbia, $2,406,200; Nova Scotia, $877,800; Manitoba, $843,700; New Brunswick, $444,400; Prince Edward Island, $55,000.

Production and Trade

Industrial Production

Figures showing the volume of production in certain industries during recent months, and also in the corresponding months in the previous year, are shown in the table on page 487.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in March, even after the adjustment for seasonal tendencies, showed a moderate gain over the preceding month. An index of manufacturing output constructed from sixteen factors was 161·1 in March compared with 153·6 in February, a gain of nearly 5 per cent. Production of steel ingots and castings was 117,487 tons, a daily rate of 3,790 tons, compared with 3,808 in February. The gain in automobile production was considerably greater than the normal seasonal increase, the output of 20,730 units comparing with 15,548 in February. Imports of crude rubber were in greater volume, while petroleum showed a decline compared with the high total of the preceding month. Imports of raw cotton were 10,300,000 pounds compared with 7,700,000 pounds in February, a gain, after seasonal adjustment of 31·5 per cent. Exports of lumber showed a moderate gain in March, and the output of newsprint was 207,485 tons compared with 189,154 tons, indicating a slight gain after seasonal adjustment.

Despite lower prices for base metals, the output of the metal mining industry showed expansion in March. The index of industrial production, a composite measuring production in forestry, mining, construction and manufacturing was 167·0 in March compared with 164·3 in the preceding month.

Coal mined in Canada during March amounted to 1,129,571 tons, a decrease of 7·6 per cent from the five-year March average of 1,211,710 tons. The March output was made up of 863,151 tons of bituminous, 28,916 tons of sub-bituminous, and 237,504 tons of lignite. Nova Scotia's output of 493,513 tons was 43·7 per cent of the total output and recorded an increase of 14 per cent over the five-year average for March. Alberta's total of 395,467 tons was 20 per cent lower than the average for the same month in the five preceding years. British Columbia mines produced 175,973 tons, a decrease of 22 per cent from the 1925-1929 March average. Saskatchewan's production of 46,410 tons was considerably higher than the five-year average, while the output from New Brunswick mines showed a slight recession.

External Trade

A summary of Canadian trade prepared by the Department of National Revenue shows that in March, 1930, the merchandise entering Canada for consumption amounted to $112,991,460, as compared with $80,922,161 in the preceding month and with $135,289,621 in March, 1929. The chief imports in March were: Iron and its products,

$31,478,139; Fibres, textiles, and textile products, $18,071,316; Non-metallic minerals and products, $12,665,526.

The domestic merchandise exported during March, 1930, amounted to $89,595,317, as compared with $66,689,817 in the preceding month and with $114,763,270 in March, 1929. The chief exports in March, 1930, were: Wood, wood products and paper, $25,768,671; Agricultural and vegetable products, mainly foods, $20,489,849; Non-ferrous metals and their products, $14,560,995.

Strikes and Lockouts

The time loss due to industrial disputes in April, 1930, was less than that occurring in March, 1930, when a strike involving 1,500 women's clothing factory workers in Montreal caused considerable time loss. As compared with April, 1929, the figures for April, 1930, show that a much smaller number of workers were involved and that the time loss for the month was very much less than that occurring during the same month last year when two strikes, one involving some 850 painters and the other about 1,000 carpenters in Montreal, caused considerable time loss. There were in existence during the month nine disputes, involving 280 workers, and resulting in a time loss of 3,834 working days, as compared with three disputes, involving 1,583 workers and resulting in 5,484 working days' time loss in March. In April, 1929, there were on record thirteen disputes, involving 2,369 workers, and resulting in a time loss of 24,288 working days. At the end of the month there were three disputes recorded as strikes or lockouts involving approximately one hundred workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $11.24 at the beginning of April, as compared with $11.67 for March; $11.01 for April, 1929; $10.87 for April, 1928; $10.80 for April, 1927; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for May, 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. The decline was due mainly to a seasonal fall in the price of eggs, although declines occurred also in the prices of veal, pork, milk, butter, bread, flour, beans, sugar and potatoes. Slight advances occurred in the prices of beef, mutton and bacon. Including the cost of fuel and rent with that of foods the total budget averaged $21.53 at the beginning of April, as compared with $21.96 for March; $21.30 for April, 1929; $21.11 for April, 1928; $21.02 for April, 1927; $21.64 for April, 1926; $20.82 for April, 1925; $20.58 for April, 1924; $21.21 for April, 1923; $20.66 for April, 1922; $23.31 for April, 1921; $25.34 for April, 1920; $26.92 for July, 1920 (the peak); $20.01 for April, 1918; and $14.32 for April, 1914. Fuel was slightly lower, due to declines in the prices of coal and wood. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly lower at 91·7 for April, as compared with 91·9 for March; 94·1 for April, 1929; 98·3 for April, 1928; 97·3 for April, 1927; and 101·2 for April, 1926. In the grouping according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The Vegetables and Vegetable Products group advanced considerably, due to higher prices for wheat, barley, corn and fresh vegetables, which more than offset declines in the prices of rubber, sugar, coffee and chinawood oil. The groups which declined were: the Fibres, Textiles and Textile Products group, because of lower quotations for cotton fabrics, raw silk, silk fabrics, and wool; the Wood, Wood Products and Paper group, due to lower prices for shingles and groundwood pulp; the Iron and its Products group, due to lower prices for pig iron and steel billets; the Non-Ferrous Metals and their Products group, due to declines in the prices of antimony, copper, copper products, lead and zinc; the Non-Metallic Minerals and their Products group, because of lower prices for lime and cement; and the Chemicals and Allied Products group, due to lower prices prevailing for copper sulphate, ether and logwood extract. The Animals and their Products group was unchanged.

During the month of April a total of 4,914 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 13 of which were fatal cases; in Schedule 2 industries 380 were reported including 6 fatal cases; and 228 Crown, 3 of which were fatal, were reported during the month, making in all 5,522, of which 22 were fatal.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF APRIL, 1930

DURING the month of April the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees on Eastern and Western Lines being clerks, freight handlers, station and stores department employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute as set forth in the application related to the employees' request for increased wages and changed working conditions. During the course of the investigation the demand concerning working conditions and the question of the adjustment of certain inequalities were withdrawn from the Board's jurisdiction by the parties concerned. The scope of the Board's inquiry was therefore limited to the question of general increase of wages. The personnel of the Board was as follows:—the Honourable Charles Laurendeau, K.C., chairman, appointed on the joint recommendation of the other Board members; Messrs. Errol M. McDougall and John T. Foster, both of Montreal, nominated by the company and employees, respectively. The report of the Board was signed by the chairman and Mr. McDougall. Mr. Foster, the employees' nominee, submitted a minority report. The texts of the two reports are given below.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received during the month as follows:—

(1) From the officers and crew of the S.S. "P. E. Island," owned by the Canadian National Railways and operating between Borden, P.E.I., and Cape Tormentine, N.B. Sixty employees, being engineers, mates, quartermasters, deckhands, firemen, oilers, stewards, cooks, waiters, etc., members of the Canadian Brotherhood of Railroad Employees, were stated to be directly affected by the dispute. The request of the employees for a schedule of wages and working conditions and their demand to be represented in negotiations by a person of their own choice were stated to be the cause of the dispute. The Chief Conciliation officer of the Department was in touch with the parties concerned at the close of the month.

(2) From longshoremen at the Port of Vancouver as represented by the Vanccuver and District Waterfront Workers' Association. The Shipping Federation of British Columbia, Limited, represented the employers concerned. Eleven hundred men were stated to be directly affected by the dispute, which arose out of the employees' request for increased compensation and the employers' desire to have the working conditions adjusted in certain respects. Mr. F. E. Harrison, Western Representative of the Department of Labour, conferred with the parties concerned and arranged joint meetings between committees representing both sides of the dispute. These renewed negotiations were in progress when the month closed.

Board Established

A Board of Conciliation and Investigation was established by the Minister of Labour on April 12th to deal with a dispute between the shipping interests of the Port of Halifax and the Longshoremen's Association of Halifax, Local 269 of the International Longshoremen's Association. The dispute related to the interpretation of the section of the existing agreement which deals with the minimum number of men to be employed. A strike had occurred in this case, and the Minister established a Board of Conciliation and Investigation without application of either of the parties to the dispute. Each party, however, recommended a person for appointment as Board member, Mr. W. C. Macdonald, K.C., of Halifax, being appointed member of the Board on the employers' nomination, and Mr. John A. Walker, barrister of Halifax, Board member on the employees' nomination. The chairman of the Board, the Reverend Dr. Clarence Mackinnon, of Halifax, was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members.

Report of Board in dispute between the Canadian Pacific Railway and its railway clerks, freight handlers, station and other employees

To the Honourable,
The Minister of Labour,
Ottawa, Ontario.

SIR,—On the 24th of June, 1929, an application was made by the representatives of the above mentioned employees on the Eastern Lines and Western Lines of the said Brotherhood for the appointment of a Board of Conciliation and Investigation under the said Act.

The dispute, which affects some 4,100 employees, arises out of failure of the parties to agree upon request made by the employees to the company for various changes in working conditions and for an increase to all said employees of six cents per hour and an amount of $6,000 per month for the adjustment of inequalities for the Western Lines and an amount of $5,000 per month for the adjustment of inequalities for the Eastern Lines.

The above application was granted and a Board was established in accordance with the provisions of the said Act. The said employees recommended Mr. John T. Foster, of Montreal, and the Canadian Pacific Railway recommended Mr. Errol M. McDougall, K.C., of Montreal, as members of the Board. Under recommendation of Messrs. John T. Foster and Errol M. McDougall, Mr. Charles Laurendeau, K.C., of Montreal, was appointed third member and chairman of the Board.

After having been duly sworn the members of the Board held their first meeting at Montreal on the 26th of August, 1929, and held after that date several other meetings also at Montreal to hear the parties and to deliberate.

The parties to the dispute were represented before the Board as follows:—

On behalf of the Canadian Pacific Railway:—

Messrs. George Hodge and A. C. MacKenzie of the Eastern Division, and J. Lorimer and W. S. Hall of the Western Division.

On behalf of the employees:—

Messrs. T. H. Hall, A. J. Oliver, W. A. Rowe and J. L. Pateman.

The parties agreed to proceed first on the demand for a general increase of wages.

During the course of the investigation the Board was asked not to deal with the demand relating to changes in working conditions and that question was considered as withdrawn from the jurisdiction of the Board.

As to the demand for the adjustment of certain inequalities, the parties were requested by the Board to meet and to do their utmost to settle that question between themselves. On the ninth of April (1930) the Board was informed by the representatives of the employees that the services of the Board will not now be required to deal with this matter which may now be considered as withdrawn from the Board's jurisdiction.

The jurisdiction of the Board is consequently limited to the question of general increase of wages.

A considerable amount of evidence, verbal and by means of documents, statements, etc., and a considerable amount of arguments, verbal and in writing, were produced before the Board.

The employees' demand is based upon the following grounds:—

1. Wages of railway workers and especially the classes involved in the present dispute should be high enough to permit them to live according to the standards generally accepted as fair and reasonable in their communities.

2. Changes in the wage rates of the workers generally, or of railway workers generally, or of any large class of railway workers, justify other classes of railway workers in expecting similar increases in their rates. There can be no justification for discrimination against one group of railway workers in favour of another, or against railway workers in the community or nation as a whole. By the same reasoning, unjust inequalities in the rates of pay for similar work should be eliminated.

3. Improvements in the efficiency of productivity of the railway workers, or any class of them, justify higher rates of pay. A better quality or greater quantity of service rendered or a reduction in the unit cost of such service merits recognition in the wage scale.

4. Railway workers should be permitted to share in any general railway or national prosperity, certainly not less than other groups of workers, that is not to say that wages should advance or decline with every slight change in railway earnings; such a position, we believe, is unjustified. But a sound and general prosperity of the nation and of the railways should not exclude these railway workers, whose influence in creating such prosperity is second to that of no other group on the railways or in the nation.

5. These employees are not paid wages high enough to permit them to live under proper conditions.

6. Wage rates of these workers have not changed in proportion to those of other workers.

7. The productivity of the classes of workers now before the Board, on the Canadian Pacific Railways and on all Canadian railways, has greatly increased in recent years.

8. During the recent years the Dominion of Canada and the Canadian Pacific Railway have recovered from whatever of business depression they were suffering and gone forward to almost unbelievable heights of prosperity.

The reasons submitted by the company are the following:—

1. Very substantial increase in rates of pay and improvement in working conditions have been received by the employees and since the rates of pay were last established by agreement there has not been any increase in the

cost of living and the employees are now in a better position in respect to their rates of pay in relation to the cost of living than they were even in 1920 and 1921 when all classes accepted by agreement decreases in their rates of pay.

2. The employees concerned have generally speaking received adjustments in their rates of pay equal to similar classes of employees on United States Railways although practically all other classes have accepted adjustments less favourable.

3. The employees are enjoying rates of pay and conditions on the whole equal, and in some respects better, than similar classes on United States railways, notwithstanding that the increase in the cost of living over a period of years under review has been greater in the United States than in Canada, and the rates of pay of the employees, and particularly so of freight shed employees, are now substantially in excess of the rates of pay enjoyed by those performing similar classes of service in other industries.

4. The employees in recent years have had their rates of pay increased not only in excess of other classes of railway employees, but also very much in excess of increases in compensation received by employees outside of railway service as indicated by Government reports, and the existing rates of pay for employees involved are now closer to the peak rates of pay than some other classes.

5. The railway's net revenues fall so far short of meeting requirements as established by recognized authorities for the proper protection of the investments in its properties and the railway is facing such a serious reduction in its revenue due to the crop conditions that the company cannot consent to any increase.

In 1926 the same classes of employees made a demand for general increase of ten cents per hour for employees engaged on an hourly basis and $24.40 per month for employees engaged on a monthly basis. A Board of Conciliation was appointed in 1926. It would appear by the award rendered by that Board on the 12th of February, 1927, that the demand of the employees was based substantially on the same grounds and the reasons invoked by the company were substantially the same as those submitted to this Board.

By a majority decision (the company's representatives being dissident) an increase of four cents per hour to hourly rated employees and an equivalent increase to monthly rated employees was allowed.

The company refused to accept the decision of the Board, but made an agreement with the employees whereby an increase of about three cents per hour was granted. The difference between what the employees receive under the agreement and what they would have received under the award represents one cent per hour.

The employees' demand amounts to a demand of revision of the decision of the Board rendered in 1927 and of the agreement that followed it, and which became effective on March 16 and June 1, 1927.

In order to do that, the Board would have to go many years back, and review all that has been said, proved and decided by previous Boards or accepted by mutual agreement.

In our opinion, nothing can be gained by that. We must presume that all that has been done previous to 1927 and in 1927 was under the circumstances then prevailing fair and reasonable.

The question now is as to whether the conditions which have taken place since 1927, and which are now prevailing, justify an increase of wages.

It does not appear that the cost of living has increased since 1927, nor does it appear that the economic conditions of the country and the financial conditions of the company are such that the employees might claim now more money to raise their standard of living.

The wages now earned by the employees concerned in this case compare favourably with those earned by similar classes of employees on other Canadian railways and even on American railways (taking into account the difference in the cost of living which is higher in the United States than in Canada) and also with wages paid in other industries.

It has been suggested by the employees that other classes of employees of the Canadian Pacific Railway Company as shop mechanics, maintenance of way men, have received lately an increase of wages and there is therefore discrimination.

The company admits that such increase was granted but solely for the reason that those classes of employees were not receiving wages on a parity with other classes.

It is very difficult to determine what is the relative importance of each class of employees and the rate of wages to which each class is entitled. But the evidence before us does not show that the discrimination complained of exists.

After a careful consideration of all the evidence and arguments submitted to us, which we do not consider necessary to analyze, we come to the conclusion that the merits and substantial justice of the case require that there be no general increase under existing

conditions in the wages paid to these employees.

All of which is respectfully submitted.

Montreal, April 23, 1930.

(Sgd.) CHARLES LAURENDEAU,
Chairman.

(Sgd.) ERROLL M. McDOUGALL,
Representing the Company.

Minority Report

To the Honourable
The Minister of Labour,
Ottawa, Ont.

SIR,—The undersigned dissents from the opinion and decision of the other Members of the Board, and begs to report as follows:—

In a general way, the majority report sets forth the contentions of the respective parties to the dispute which developed from the company's refusal to grant to the employees concerned a general increase in their rates of pay of six cents per hour.

I find the evidence submitted in the matter supports conclusively the position of the employees. Following are set forth some of the respective contentions, and my conclusions following an analysis of them. Evidence from both sides was submitted in both written and oral form.

As set forth in the majority findings, paragraphs one and five showing the basis of the employees' demands, it is contended as follows:—

"Wages of railway workers and especially the classes involved in the present dispute should be high enough to permit them to live according to the standards generally accepted as fair and reasonable in their communities.

"These employees are not paid wages high enough to permit them to live under proper conditions."

Employees appearing before the Board and giving evidence showed that in some cases they were receiving less than $100 per month, out of which they had to pay rent and maintain a family. Exhibit No. 4, submitted by the employees, shows that in cities comparable with many in which these workers live, a simple average of requisite wages is $1,600.19 per year, $133.35 per month $5.23 per day, 64.4 cents per hour. The average rate of monthly rated employees affected in this dispute, including freight checkers, is $111.42, the average hourly rate 50 cents. It will be seen that the deficit on this basis is $21.93 per month—19.7 per cent and per hour 15.4 cents or 30.8 per cent. It must be remembered too that the rates quoted above are average, and that there are many below $100 per month.

In connection with the above, the company endeavoured to prove that the cost of living is lower in Canada than in the United States, but in my opinion the evidence indicates that what difference there is, is caused by the respective methods of computation and the use of different indexes and commodities.

Paragraphs two and six of the employees demands as set forth in the majority report are as follows:—

"Changes in the wage rates of the workers generally, or of railway workers generally, or of any large class of railway workers, justify other classes of railway workers in expecting similar increases in their rates. There can be no justification for discrimination against one group of railway workers in favour of another, or against railway workers in the community or nation as a whole. By the same reasoning, unjust inequalities in the rates of pay for similar work should be eliminated.

"Wage rates of these workers have not changed in proportion to those of other workers."

The employees have taken the position that the company's recent action in increasing the wages of many thousands of its employees of other classes, already higher paid in most cases, is discriminatory, and in the second place evidence of the company's favourable financial position. Employees exhibit G12 contains a record of these increases. In the case of the shopmen, an already much higher paid class, receiving a favourable differential of 24 cents per hour above trucker's rates, they were granted an increase of 5 cents per hour, unjustifiably increasing the differential to 29 cents per hour. The approximate number affected, and receiving the major increase, exceeds 12,000, and the amount involved would be about $1,369,460. To this must be added approximately $80,164 for those, apprentices and others, who received less than the five cents per hour increase. Page 2, Exhibit G12, contains a record of other recent increases, to maintenance of way employees and passenger conductors, 17,900 in all, who have received various increases. It should be borne in mind that these increases were granted without going to a Board of Conciliation and Investigation, and that the total number of employees receiving them is almost half the entire number of the company's employee's, and nine times more than the number involved in this dispute. Having, therefore, voluntarily increased the wages of approximately half of its employees, at a cost as has been shown, it can hardly justify withholding an increase from the small number herein affected, being a mere

four thousand. This seems to be straining at a gnat, after having swallowed the camel.

I consider that the employees have conclusively shown, on page six of their rebuttal, that there has been discrimination against them. Certainly, certain classes have received preferential treatment since 1914. It is shown that in some cases rates of other employees were equal with those of the truckers involved in this dispute, in 1914, and are now 22 cents above the truckers rates. Others who were in 1914 receiving 3 cents per hour above truckers rates are now from 22 cents to 29 cents above. The company's reply to this statement and evidence (see page 3 Co's Comments on Employees' Rebuttal) is merely to deny the exactness of the figures quoted, but they offer no evidence on the point to destroy the main contention as to these increased differentials. Much has been said regarding the truckers rates, but the amount involved to increase the truckers, who compose approximately 27 per cent of the entire number involved, would be slight compared with the amounts recently granted by the company. Employees' Exhibits F3, pages 1 and 2, illustrate various changes in wage rates since the peak of 1920, and indicate the unfavourable position of these classes. The company's reply to these, appearing in its Memorandum in Rebuttal, page 11, does not deny the exactness of the figures, but argues, irrelevantly, that this state is caused by the fact that the different classes were increased and decreased during different periods. The examples stand undisputed as statements of fact as to present day conditions. I cannot, therefore, agree with the conclusion of my colleagues that the evidence does not indicate discrimination against these employees.

Paragraphs 3 and 7 of the employees' demands as set forth in the majority report are as follows:—

"Improvements in the efficiency or productivity of the railway workers, or any class of them, justify higher rates of pay. A better quality or greater quantity of service rendered or a reduction in the unit cost of such service merits recognition in the wage scale.

"The productivity of the classes of workers now before the Board, on the Canadian Pacific Railway and on all Canadian railways, has greatly increased in recent years."

In the appearance before the Board of several witnesses, employees amply demonstrated their intelligence, technique and ability, and that their work was such as to require these qualities. In the case of clerical employees, much of their work was shown to be intricate and exacting. In the case of freight handlers it was clearly shown there is no analogy between their work and that of so called common labour.

Employees Exhibit No. C4, Rating of Clerks in Army Intelligence Tests, gives clerks a rating of 175, being 69 points higher than railway workers generally, 54 points higher than the median score of all, and rating twelfth in the list of 55 occupations.

There seems no question that owing to reductions in staffs of recent years, that efficiency has greatly increased, thus reducing cost of operation. Witnesses appearing before the Board indicated that efficiency is now at a higher level than ever before.

Paragraphs 4 and 8 of the employees' demands as set forth in the majority report are as follows:—

"Railway workers should be permitted to share in any general railway or national prosperity, certainly not less than other groups of workers, that is not to say that wages should advance or decline with every slight change in railway earnings; such a position, we believe, is unjustified. But a sound and general prosperity of the nation and of the railways should not exclude these railway workers, whose influence in creating such prosperity is second to that of no other group on the railways or in the nation.

"During the recent years the Dominion of Canada and the Canadian Pacific Railway have recovered from whatever of business depression they were suffering and gone forward to almost unbelievable heights of prosperity."

There are conflicting statements as to the company's financial position, out of which may be sifted the following facts. That the company is in a sound condition with present satisfactory returns, modified only by last year's crop condition, but in no way reflecting permanent embarrassment.

The company's own submission No. 7 illustrates its rate of return on investment to be 4·407 per cent, and while it is attempted to show in this exhibit that the figure is inadequate in the light of what the I.C.C. in the United States estimates as a fair return, i.e., 5¾ per cent, the employees have proven, on page 17 of their Rebuttal, quoting the Railway Age for September 7, 1929, that class one roads in the U.S. earned less than 3 per cent on their investment.

The company has attempted to show, in its Submission No. 4, that United States Railways are more favourably situated in respect of many earning factors, but this is entirely offset by evidence submitted by Employees' Rebuttal, where it is shown that U.S. Railways pay approximately $1,550 per mile taxes per year, while Canadian railways pay only an average of $250.

The C.P.R. is a class one road. Evidence quoted above indicates it is earning a better return than class one roads in the United States. Yet its wages are lower, as evidenced in various exhibits furnished by the employees. Employees' Exhibit F.11 illustrates this point. Employees' Rebuttal, pages 13 and 14, gives other comparisons which indicate higher U.S. rates. The evidence shows, also, that some of these roads have had recent arbitrations favourable to the employees (G series of exhibits), and that others are now in or approaching wage negotiations. I am of the opinion that the company's present position from a standpoint of earnings and ability to meet the employees' demands, is eminently satisfactory, compared with any year prior to 1929, with the exception of 1928, which was an exceptionally good year.

I dissent from the opinion of the majority of the Board that in its investigation of the dispute, conditions and circumstances obtaining prior to the 1927 Board decision (which recommended an increase of 4 cents per hour to all these classes of employees) should not be considered. In any case, the statement that the agreement following that decision granted an increase of "about three cents per hour" is misleading. The agreement granted three cents, excepting to freight truckers at certain large points in the east, who received only two cents. If the majority of the Board take the 1927 Board report as a basis, it must recognize the fact that in order to apply its findings these employees should now—apart from any consideration arising from subsequent developments and circumstances,—receive an increase to some classes of one cent per hour and to others two cents per hour. If in 1927 the employees finally agreed to accept less than that recommended by the Board it may be inferred it was not from choice, but of necessity or as preferable to an undesirable alternative. I find some inconsistency in the attitude that the majority of the Board will not consider circumstances obtaining prior to 1927—neither will it reiterate the opinion of the Board which did. In effect, the majority has nullified part of the 1927 Board report, while stating it has not considered the pre 1927 status.

The so-called "cost of living" is an emasculated factor in consideration of such a case as this. The wages of these classes of employees are so far below the cost of any decent or adequate standard of living that the term has no significance or application when used in connection with periodic changes upward or downward.

I think that the evidence and conclusions appearing in the foregoing paragraphs indicate justification for my difference of opinion with my colleagues upon the ability of of the company to meet the employees' demands. As to the economic condition of the country, it occurs to me that it could not be other than improved by increasing the purchasing power of a section of its workers.

Similarly, evidence referred to indicates to me that wages on class one roads in the United States are higher than those of the employees herein concerned.

In my opinion, the views of my colleagues were influenced by a recent wage settlement for similar classes of employees on the Canadian National Railways, out of all proportion to its actual significance.

There is no proof that wages in comparable industries are lower—what evidence the company submitted on this point referred only to industries where there is no organization among the employees, and where rates of pay are, consequently, arbitrarily established and maintained.

A recapitulation of my conclusions may be stated as follows:

1. The cost of living, based on a decent standard of living, is such as to make an increase in wages essential.

2. The Canadian Pacific Railway is able to grant this increase.

3. Other classes, composing approximately 50 per cent of the company's entire forces, have recently been increased.

4. The nature of the employees' duties are exacting and require skilled application thereto.

5. Their wages have not kept pace with others, both in railway and outside industry.

6. Other Boards of Conciliation and Investigation have in recent years passed favourably upon their wages, but the decisions were not applied.

7. Wages on many class one United States roads are higher, while earnings are lower.

The demand for a general increase of 6 cents per hour is just and reasonable, and should be concurred in.

All of which I respectfully submit.

April 23, 1930.

(Sgd.) J. T. FOSTER,

Member, Board of Conciliation and Investigation.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

TWO new decisions and a supplement to an earlier decision were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the LABOUR GAZETTE, March, 1930, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Case No. 357—Canadian National Railways, Atlantic Region, and Brotherhood of Locomotive Firemen and Enginemen.

A locomotive engineer was dismissed on the charge that he was responsible for a collision between two trains at Windsor Junction, Ontario. The employees asked for his reinstatement with payment for the time he was held out of service. The company pointed out, however, that the employee had failed to follow his instructions and that his failure to do so had resulted in the death of one passenger, serious injury to a number of others, and extensive damage to the oil electric car of which he was in charge. The Board did not sustain the claim of the employees.

Case No. 358—Canadian National Railways, Atlantic Region, and Brotherhood of Locomotive Firemen and Enginemen.

A locomotive fireman was dismissed for having been under the influence of liquor while on duty. The employees asked for his reinstatement, but the Board did not sustain this claim, the company having produced the evidence of the master mechanic showing that the engine had been abused and that both the engineer and fireman were not in a condition to be in charge. Both men were dismissed.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1930

THE number of strikes and lockouts in existence in Canada during April was nine, as compared with three the preceding month. The time loss for the month, however, was less than that occurring in March, when a strike involving 1,500 women's clothing factory workers in Montreal caused considerable time loss. As compared with April, 1929, the figures for April, 1930, show that a much smaller number of workers was involved, and that the time loss for the month was very much less than that occurring during the same month last year, when two strikes, one involving about 1,000 carpenters and the other about 850 painters, occurred, causing some thousands of days' time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*April, 1930	9	280	3,834
*March, 1930	3	1,583	5,484
April, 1929	13	2,369	24,288

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Three disputes involving some thirty workers, one not previously reported, coal miners at Glace Bay, were carried over from March, and six disputes commenced during April, six of these nine disputes terminating during the month. At the end of April, therefore, there were three disputes recorded as strikes or lockouts, as follows: men's clothing factory

workers, Montreal, P.Q.; painters, Toronto, Ont.; and carpenters, Falls River, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to five such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; photo engravers, Toronto, January 7, 1929, one employer; moulders, Lachine, P.Q., May 2, 1929, one employer; and shoe factory workers, Montreal, P.Q., January 23, 1930, one employer.

A dispute between the plumbers' union and certain master plumbers in Toronto was referred to in the April issue of the LABOUR GAZETTE, a stoppage having occurred which was not considered to be a strike or a lockout. The union had demanded that only plumbers and plumbers' apprentices should be employed on construction jobs, and the employers shut down certain jobs on March 19, until the matter could be arranged. Work was resumed on April 5, a compromise having been reached as to the extent to which labourers might handle material, etc.

A dispute involving employees in the painting department of an automobile manufacturing establishment at Oshawa was reported about the middle of April as the result of a

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1930

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to April, 1930.			
MINING, ETC.—			
Coal miners, Glace Bay, N.S...	7	175	Commenced Feb. 1, 1930; for increase in wages (piece rates). Terminated April 26, 1930. Indefinite.
MANUFACTURING—			
Clothing (including knitted goods)—			
Men's clothing factory workers, Montreal, P.Q.	66	1,650	Commenced March 18, 1930; for union wages and working conditions. Unterminated.
CONSTRUCTION—			
Buildings and Structures—			
Painters, Toronto, Ont.....	7	175	Commenced March 18, 1930; for increase in wages and change in working conditions. Unterminated
(b) Strikes and Lockouts Commencing During April, 1930.			
LOGGING—			
Loggers, Nanaimo, B.C.....	70	140	Commenced April 16, 1930; against decrease in wages. Terminated April 18, 1930. In favour of workers.
MINING, ETC.—			
Coal miners, Caledonia, N.S....	24	24	Commenced April 10, 1930; against discharge of worker. Terminated April 10, 1930. In favour of employer.
MANUFACTURING—			
Other Metals—			
Brass factory workers, London, Ont.	50	650	Commenced April 3, 1930; against investigation by efficiency engineers. Terminated April 22, 1930. In favour of employer.
CONSTRUCTION—			
Building and Structures—			
Building labourers, Lethbridge, Alta.	20	40	Commenced April 8, 1930; for increase in wages. Terminated April 9, 1930. In favour of workers.
Carpenters, Falls River, B.C..	38	500	Alleged lockout; commenced April 12, 1930; against decrease in wages. Unterminated.
TRANSPORTATION—			
Water—			
Longshoremen, Halifax, N.S..	48	480	Commenced April 10, 1930; against alleged violation of union agreement. Terminated April 19 1930. Indefinite.

proposed reduction in wages, chiefly piece rates. Work was resumed within a short time without the employees concerned leaving the establishment, the proposed reduction in wages being withdrawn.

A dispute involving boilermakers, iron shipbuilders, etc., in connection with the construction of a tow boat and barge at Kelowna, B.C., was reported about the middle of April. Union officials claimed that the prevailing conditions arranged between the union and the employers for such work provided for payment of board for the workmen when away from home, which the employer refused to pay in addition to the "field" wage scale. The Boilermakers' and Iron Shipbuilders' Union of Canada refused to allow its members to work on the job and declared it unfair. The employer, therefore, secured other workmen.

Information reached the Department too late for inclusion in the statistical record for April as to a strike of labourers employed on the construction of a building at Lethbridge on April 28 to secure time and one-half rates for overtime work and for work on Saturday afternoon, in accordance with a verbal agreement between the local contractors and the labourers' union summarized on another page. After four days the demands of the strikers were conceded and work was resumed.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

Coal Miners, Glace Bay, N.S.—Coal miners in one section in a mine ceased work on February 1, 1930, demanding a change in the piece rate for the section. On April 22 a settlement was reached with the union officials following the signing of the new district agreement.

Loggers, Nanaimo, B.C.—Loggers employed by one company ceased work against a proposed reduction in wages, and work was resumed after two days, when their demand for the old rate was granted.

Coal Miners, Caledonia, N.S.—A number of employees ceased work on April 10 in protest against the discharge of a worker at the demand of the union as he had been expelled for anti-union activity. Work was resumed the next day without the strikers securing their demand.

Brass Factory Workers, London, Ont.—Brass workers, metal polishers and buffers ceased work on April 3, protesting against the presence in the establishment of efficiency engineers with stop watches, anticipating changes in working conditions. Other workers were secured and on April 22 the strikers began to return to work, their demands not being granted.

Building Labourers, Lethbridge, Alta.—Building labourers on one job in Lethbridge ceased work on April 8 to secure the prevailing rate of wages in the locality, namely 50 cents per hour. Work was resumed two days later, their demand having been granted. A second strike on this building is referred to above and the agreement is summarized elsewhere in this issue.

Carpenters, Falls River, B.C.—Carpenters employed on the construction of a dam and power house at Falls River, near Prince Rupert, B.C., became involved in a dispute as to wages, and were paid off on April 12, 1930. It appears that an agreement had been made for a ten-hour day with the approval of the Chairman of the Board of Adjustment administering the British Columbia Hours of Work Act, with special rates of pay. The employer and the employees disagreed as to the rate of wages and over time arranged for, and new workmen were engaged. At the end of the month the dispute was reported as unterminated.

Longshoremen, Halifax, N.S.—Longshoremen unloading one ship at Halifax ceased work, claiming that there should be six men in each section of the hold instead of four, under the agreement between the union and the shipping companies. The employer pointed out that the agreement provided for a smaller number in the hold where it was not practicable for six to work. The union representative and the shipping interests not agreeing as to the application of the clause in this case, the men ceased work on April 10. The resident officer of the Labour Department took the matter up with the parties involved, and it was arranged that the case be referred to a Board under the Industrial Disputes Investigation Act, and work was resumed on April 19 with six men in the hold pending the settlement. (Page 491 of this issue).

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in March was 35 and 9 were still in progress from the previous month. The number of workpeople involved in the 44 disputes which were in progress during the month was 9,200, and the time loss 51,000 working days. Of the 35 disputes beginning in the month, 10 were over proposed reductions in wages, 14 on other wages questions, 7 on questions respecting the employment of particular classes or persons and 4 on other questions. Settlements were reached in 32 disputes, of which 5 were in favour of workpeople, 12 in favour of employers and 15 ended in compromises; in two other disputes, work was resumed pending negotiations.

A strike began in the woollen textile industry in Yorkshire County on April 10, and was still in progress at the beginning of May. Unsuccessful negotiations had been in progress for some time with regard to reductions in wages, when the Minister of Labour appointed a court of inquiry to investigate. The report submitted recommended reductions in wages of 9·25 per cent for the workers and 8·77 per cent for piece workers. The workers refused to accept this cut and the employers would not compromise, so that the strike began on April 10. Although some mills continued to operate at the old rate and some at the reduced rate of wages, and although it was reported that some of the workers were gradually returning to work in some towns, the number of workers affected by partial or total stoppages on April 15 was estimated at over 75,000.

A strike of about 3,000 dock workers at Manchester lasted from April 9, to April 17. The dispute was over working conditions, and work was resumed pending settlement.

Belgium

During the year 1929, the number of disputes which terminated was 168, of which 165 were strikes and 3 lockouts. The number of establishments affected was 516, and the total number of workpeople involved 60,557, of whom 49,236 were directly and 11,321 indirectly involved.

Of the 168 disputes, 119 were over wages questions, 16 over the discharge of employees, 7 over trade union questions and the others over various other questions. The results of the disputes were as follows: 67 in favour of employers, 49 in favour of workers, 43 ended in compromises; in addition 7 were strikes of protest and 2 sympathetic strikes.

The following table gives an analysis of the disputes for the year by industries:—

INDUSTRIAL DISPUTES IN BELGIUM DURING 1929, BY INDUSTRIES

Groups of Industries	Disputes terminating	Establishments	Workpeople affected	
			Directly	Indirectly
Mining	25	31	20,650	4,894
Quarrying	8	20	2,861	210
Metals	27	107	2,730	467
Ceramics	6	58	1,301	50
Glass	5	23	5,363	622
Chemicals	8	8	1,661	.....
Food	8	9	312	41
Textiles	28	72	5,739	4,372
Clothing	9	10	289	26
Construction	13	95	1,419	216
Woodworking and furnishing	2	11	332	29
Hides and leather	5	39	3,068	232
Tobacco	1	1	23	2
Paper	3	9	1,343	8
Books	1	1	64	.....
Art and drafting	2	2	74	.....
Transportation	9	12	1,739	151
Commerce	8	8	268	1
	168	516	49,236	11,321

France

Revised statistics for the year 1926, show the number of strikes beginning in the year as 1,660. The number of workers directly affected was 349,309 and the time loss 4,072,163 working days for the year. In addition, there were 8 lockouts affecting 16,833 workers.

Figures showing the number of disputes beginning in the second and third quarters of 1929, are as follows: April, 181 disputes affecting 27,802 workers; May, 133 disputes and 31,928 workers; June, 160 disputes and 24,706

workers; July, 131 disputes and 21,877 workers; August, 86 disputes and 16,532 workers; September, 91 disputes and 9,820 workers.

Germany

The number of disputes occurring in the fourth quarter of 1929, was 80, affecting 718 establishments and 10,719 workers. The time loss for the period was 186,119 working days.

British India

The strike of employees of the Great Indian Peninsula Railway, which began on February 4, and was mentioned in the Labour Gazette for March, was reported to have been called off on April 16, without the demands of the strikers for higher wages and better conditions being granted.

Japan

About 8,000 employees of municipal street cars and bus service were on strike for a week in April, against a reduction in wages, but returned to work on April 25, pending a settlement.

New Zealand

The following table is a summary of disputes in New Zealand for the year 1929:—

INDUSTRIAL DISPUTES IN NEW ZEALAND FOR THE YEAR 1929

Industry	Number of disputes	Number of firms involved	Number of workers affected	Total duration (days)	Average duration (days)	Working days lost	Approximate loss in wages
							£
Meat-freezing	7	10	329	54	7·71	460	158
Coal-mining	26	37	6,917	99	3·81	22,331	24,830
Shipping	14	15	552	58	4·14	2,049	498
Building	1	1	15	130	130·00	1,950	1,950
Saw-milling	1	1	18	1	1·00	18	18
	49	64	7,831	342	6·95	26,808	27,454

Philippine Islands

Statistics on strikes occurring in the Philippines show that the number of strikes reported for the year 1928 was 38, involving 4,729 strikers. Corresponding figures for 1927 are: 53 strikes and 8,567 strikers.

United States

The number of industrial disputes beginning in February was 33 and 43 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 9,084 and the total times loss for the month 465,584 working days.

No settlement was reported of the strike of taxicab drivers at Pittsburgh, Pennsylvania, which began in February and was mentioned in the Labour Gazette, March, 1930.

Employment on Farms in Ontario

The *Crop Bulletin*, published by the Ontario Department of Agriculture, summarizes returns received from nearly 500 correspondents throughout the province on April 1, 1930. The following paragraph states the conditions as to labour and wages:—

"More help is available than for five years. It may also be said that the proportion of good hands is better than for some years. Wages are not as much affected, if at all, by the ample offering of labour. While slow industrial conditions have put men at the disposal of agricultural producers everywhere, local labour as a rule supplies the farm requirements of all districts. Experienced hands can, however, command a job, and the farmer, under the present circumstances, requires experience in return for the rate of wages paid. A representative's opinion is: "Plenty of help available now for all farmers who can afford to pay the wages." This implies that in some cases at least the wages offered will not be accepted. No one can expect agriculture to absorb all the labour laid off by industry at occasional intervals. The basic problem of dependable, staying help for the average farm is not much changed. The disposition of the farmer is to take the surer way to looking for relief to the use of more machinery. The purchasing or hiring of tractors continues to gain in favour. In the last analysis, labour conditions have not assisted in placing any female help in the way of the farmers."

OLD AGE PENSIONS IN CANADA

Statistical Summary of Expenditures during First Quarter of 1930 and Since Inception of the System

THE accompanying table gives particulars of the expenditures under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the first three months of 1930, during the past fiscal year, and since these Acts became severally effective. The text of the Old Age Pensions Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session this year to become effective on its proclamation by the Lieutenant Governor in Council. The final report of the Nova Scotia Commission on Old Age Pensions is outlined in this issue of the LABOUR GAZETTE and the question of participating in the system is still under consideration in that province.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31, 1930

	Alberta Act: effective Aug. 1, 1929	British Columbia Act: effective Sept. 1, 1927	Manitoba Act: effective Sept. 1, 1928	Ontario Act: effective Nov. 1, 1929	Saskatchewan Act: effective May 1, 1928	North West Territories Order in Council. effective March 1, 1929	Totals
Total number of pensioners as at March 31, 1930	2,017	4,576	5,104	26,370	4,482	4	42,553
Total amount of pensions paid during last quarter of fiscal year 1929-30 (period Jan. 1-March 31, 1930)	$142,309 73	$272,449 02	$310,401 09	$1,544,030 38	$271,284 45	$306 10	$2,540,780 77
Dominion Government's share of expenditure	71,154 86	136,224 51	155,200 55	772,015 19	135,642 22	306 10	1,270,543 43
Total amount of pensions paid during fiscal year 1929-30, (period, April 1, 1929-March 31, 1930)	267,420 04	988,088 58	1,164,687 97	2,255,688 32	937,858 89	557 74	5,614,301 54
Dominion Government's share of expenditure	133,710 01	494,025 55	582,343 99	1,127,844 16	468,929 43	557 74	2,807,410 88
Total amount of pensions paid since inception of the Old Age Pensions Act to March 31, 1930	267,420 04	2,049,674 52	1,649,295 67	2,255,688 32	1,319,942 83	557 74	7,542,579 12
Dominion Government's share of expenditure	133,710 01	1,024,818 51	824,647 85	1,127,844 16	659,971 41	557 74	3,771,549 68

OLD AGE PENSIONS IN NOVA SCOTIA

Final Report of the Provincial Commission

THE final report of Mr. H. E. Mahon, who was appointed by the Government of Nova Scotia in August, 1928, to investigate the question of participation by the province in the Dominion Old Age Pensions Act, was made public early in April. The commissioner's interim report, dated February 22, 1929, was reviewed in the LABOUR GAZETTE, May, 1929, page 501. The interim report estimated the cost of the proposed scheme on the basis of conditions in a sample section of the province, consisting of six counties and the city of Halifax. The inquiry was subsequently completed in Cape Breton county (the city of Sydney, and the towns of North Sydney, Sydney Mines, Dominion, New Waterford, and Louisburg being omitted) the city of Halifax, and the counties of Shelburne, Richmond and Hants. These localities, in the Commissioner's opinion, constituted an adequate sample of the province as a whole. The final report contains the tabulated results of the inquiry and the computations based upon them.

It will be recalled that the Dominion Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) makes provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. Under the federal Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year, and who has resided in Canada for the 20 years preceding, and also has resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding months.

As was stated in the Interim Report, the Commissioner estimated the number of persons of 70 years of age and over in Nova Scotia on July 1, 1928, to be in round numbers 25,500. From the total number of aged persons certain deductions were made to allow for those who would not quality under the terms of the federal Act on account of being non-British citizens or Indians as defined by the Indian Act; and 25,300 was arrived at as the number of persons who, subject to the means and residence qualifications, would be eligible for Old Age Pensions in Nova Scotia.

Income Status.—A table is given in the report showing the status of the persons interviewed, 4,713 in number, in regard to their income. The percentages of these persons, by income groups, are given below. The Commissioner remarks in reference to these figures that evidently elderly people have either succeeded in accumulating a moderate competence, or else are practically destitute and dependent upon others. However, very few cases of absolute destitution were found. Most of those who had nothing of their own were being cared for by their children or by friends. It is noticeable that the rural counties, Hants, Richmond and Shelburne, appear less favourably situated than the urban and industrial districts of Halifax and Cape Breton. This is considered to be due, in part, " to the greater possibility of accumulating wealth in the city, and, in part, to the fact that many of the advantages and comforts of living in the country are apt to be left outside the concept of income." In Cape Breton many persons are receiving pensions from the British Empire Steel Company.

Sources of Support.—Of 3,789 persons interviewed in Halifax City and the Counties of Richmond, Cape Breton and Shelburne, 2,767 were reported as having incomes of less than $400 per annum. The sources of support of these persons is shown in a table in the report. Many of those reported as self-supporting were drawing on the principal of their savings, and some of them were just about to seek aid from others. Many others reported as self-supporting had small properties yielding them shelter, firewood, and incidental supplies of food, but the saleable value of these properties was so small as to make the annual return at 5 per cent practically insignificant. Of those supported by others by far the greatest number were supported by their children. Of the 156 supported by friends, many had assigned their property in consideration of their being looked after for the rest of their lives.

Number of Children Living.—The Commissioner notes that the provinces which have so

far adopted the pension scheme, unlike Nova Scotia, have in force Parents Maintenance Acts, under which a son or daughter, having sufficient means, is bound to provide for a dependent parent.

The investigation showed that 2,067 persons interviewed in Halifax City and the Counties of Cape Breton, Richmond and Shelburne had in all 6,379 children living. Of these 31.2 per cent had emigrated from the province, and would be outside the scope of a Parent's Maintenance Act, did one exist in the province. Many aged persons, it is stated, find their children their best support. Of those having one child living, 51 per cent receive full support from that child. The larger the number of children, the better was the chance of the parent being aided by children. Approximately 70 per cent of those having two, three and five children could expect full support, and 75 per cent and 72 per cent of those having four or six or more respectively. In many cases, however, the children were reported as being able to give full support because they were already providing a living for their parents, but they were doing so with great hardship, often having large families of their own. It is therefore possible, the report states, that the figures given represent the ability of the children to aid their parents to a greater extent than is actually the case.

The greater number of aged persons interviewed were living either in their own homes or with their children. Many of the persons listed as living with friends performed some small domestic services for their keep, but the persons with whom they were living were more in the nature of beneficent friends than employers proper.

Sex and Marital Status.—A table is given showing the sex and marital status of the persons interviewed in Halifax city, and the Counties of Cape Breton, Shelburne and Richmond. In agreement with the returns of the last Dominion census more women were found than men. The percentage of married men exceeds the percentage of married women, and the number of widows exceeds the number of widowers. "This is probably due to the fact that men usually marry women younger than themselves, and later in life than women. The first impression presented by the tables is that the extent of dependency among the aged population of Nova Scotia is very great. This is of course true in an absolute sense, it is stated, but life insurance statistics show that the condition is not at all peculiar to Nova Scotia. For example, a table is taken from a pamphlet on Canadian Government Annuities published by the authority of the Dominion Minister of Labour, showing that of fifty-six living Canadians at the age of sixty-five, forty-six or 82 per cent are dependent upon others for support. Taking eligibility for Old Age Pensions as a criterion, the extent of aged dependency in Nova Scotia compares very favourably with this record. Of the 25,300 septuagenarians in Nova Scotia, 18,427 or 73 per cent are eligible for pensions of various amounts, and the age is seventy years or over as contrasted with sixty-five years in the above comparison.

Cost of Pensions

"The distribution of income among the persons eligible for pensions in the province, as estimated by means of the percentages obtained from an analysis of the condition of 4,713 persons interviewed, was as follows:—

INCOME DISTRIBUTION

Annual Income	Per Cent of British Aged Population	Total No. of Persons
$400 and over	25·1	6,350
$300 to $399	5·9	1,493
$200 to $299	7·9	1,999
$100 to $199	12·6	3,188
Less than $100	10·8	12,270
None	37·7	

"It is estimated that 65 per cent or 970 of those with incomes $300 to $399 have incomes from $300 to $364.

"On the basis of this distribution of incomes, the present annual cost of paying pensions to the aged citizens of Nova Scotia as provided by Chapter 156, Revised Statutes of Canada, 1927, may be computed as follows:

12,270 pensioners with no income or less than $100 at 240 each	$2,944,800
3,188 pensioners with average income $150 at 215 each	685,420
1,999 pensioners with average income $250 at 115 each	229,885
970 pensioners with average income $332 at $33 each	32,010
Average pension, $211.20	$3,892,115

"The total amount payable in pensions according to this estimate would be roughly $3,800,000, of which the Federal Government would pay half ($1,900,000), and the Provincial Government would be responsible for the same, plus the cost of administration.

"In estimating the cost of any new undertaking, allowance should be made for a reasonable margin of error. Two important unpredictable factors which may affect the cost of Old Age Pensions are (a) the strictness or looseness of the pension authority in determining the income of the pensioner, and (b) the effect that pension legislation may have upon the incomes of the pensioners. With reference to the former, an addition was made to the Old Age Pensions regulations, allowing the provincial authority to adopt such methods as may be deemed equitable in determining the income of the pensioner. This addition was made on recommendation of the Interprovincial Old Age Pension Board. The probable effect of the latter factor would be to increase the cost. In Canada the maximum income allowed a pensioner is $365 a year, and the pension is graduated in such a way as to keep the total income within this limit. As stated in the Interim Report, it is quite possible that pensions of this sort might lessen the incentive to work and earn, since small earnings would cease to be worth while. They would not represent a net addition to income since they would be counteracted by a corresponding reduction in the pension. A large proportion of the aged population of Nova Scotia are still gainfully employed in various lighter occupations. If the proposed pension legislation would tend to induce them to give up their employment, the fact would add materially to the cost of Old Age Pensions. What is true in the case of small earnings is also true of small savings. Persons approaching a pensionable age would feel inclined to spend their small capital accumulations rather than suffer a deduction in their pension when they become eligible."

Discussing the reciprocal provisions of the Federal Act, whereby the provinces entering into the scheme become mutually liable for a proportion of the cost of pensions of persons who have changed their place of residence during the past twenty years, the Commissioner points out that the effect of this clause would be to further increase the number of pensioners for whom Nova Scotia would be partly responsible, and since most migration has been from east to west, rather than in the opposite direction, it is improbable that Nova Scotia could claim reimbursement from any of the other provinces under this provision of the Act. This clause would also add to the cost of administration owing to the difficulties in verifying the correct length of residence in the different provinces.

Sources of Revenue

The commissioner examines the possible sources of revenue for old age pensions in the last sections of the report.

"If Nova Scotia," he declares, "is to adopt Old Age Pensions on a non-contributory basis, it appears that the revenue will have to be secured by taxation, and this presents for Nova Scotia, in common with the other eastern provinces, a special problem. It is now said that every province west of Quebec has Old Age Pensions. It could be said with greater significance that no province east of Ontario has Old Age Pensions. The reason is not hard to find. As has been previously stated, it is not due to lack of appreciation of the problems of aged dependency, but has its essence in economic fact, and unalterable social conditions. The eastern provinces are hesitating to adopt the scheme because, on account of their less favourable age composition, it would constitute a tremendous financial burden."

After an analysis of the population of the various provinces of Canada by age groups, the report proceeds as follows:—

"If the population between 15 and 65 be regarded as performing most of the work of the community, and the population outside these limits as depending upon the work of the former class, Ontario (say) ought to produce more wealth per 100 of population, by reason that more of the hundred are at the productive ages. The taxable capacity of the province is affected accordingly. Further, taxable capacity may only properly be considered in relation to the benefits arising from public expenditure. Consequently, it will readily be seen that taxable capacity for Old Age Pensions in Nova Scotia is very low, since no benefits accrue to the relatively small class upon whom the burden chiefly rests.

"All the principal sources of provincial tax revenue, it is stated, are employed in Nova Scotia with the exception of direct taxation upon individuals for real and personal property, or incomes. These have already been suggested as possibilities for supplying the revenue for Old Age Pensions in the Interim Report."

Another tax, it is suggested, that might be used as a supplementary source of revenue for Old Age Pensions is a tax on rental values or "Habitations Tax." Three minor sources of revenue possibly worth mentioning are (*a*) A tax on parlour-car chairs, and state-rooms sold within the province; (*b*) A tax on railway tickets sold within the province, and (*c*) a stamp tax on legal documents.

The Commissioner concludes with the fol-

lowing brief summary of the pension situation as it exists in the province:—

"The present tendency in public opinion and conscience, as well as in legislation activity is toward the assumption by the state of a much larger share of responsibility in the care of its aged poor and needy citizens than in the past. Unfortunately, in Nova Scotia, the proportion of the population 70 years of age or over is very large, and the number in the productive age groups relatively small. For this reason all of the measures of taxation that have been proposed to meet the cost of Old Age Pension on a non-contributory basis would constitute a very serious burden.

The Secretary of the Commission was Mr. A. L. Neal, B.Sc. (econ.).

WIDOWS', ORPHANS' AND OLD AGE CONTRIBUTORY PENSIONS IN GREAT BRITAIN

AN outline of the provisions of the recent Act amending the Widows', Orphans', and Contributory Pensions Act of Great Britain was given in the LABOUR GAZETTE, January, 1930, page 3. The following statement as to the benefits of the Act, as amended, and the approximate number of the various classes of persons provided for, is taken from a "Brief Guide" to the Act, by J. F. Shillaker, M.P., published by the Labour Party of Great Britain. The classes benefiting are stated as follows:—

On January 2, 1930.—24,000 wives over 65 unable to obtain an old age pension because their husbands were over 70 on January 2nd, 1928.

18,000 widows, whose pensions have ceased because the youngest child had reached the age of 14½. The new age limit is 16 or the 31st July following the date of reaching the age of 16, if the child remains at school until that date.

20,000 persons refused a widows' pension or an old age pension because the average number of contributions had not been paid or credited in the years immediately prior to death or reaching the age of 65.

10,000 children for whom pension allowances were not payable or were paid at a reduced rate owing to the fact that they were receiving compensation under the Workmen's Compensation Act.

Inmates of Poor Law Infirmaries and Mental Hospitals. Widows' Pensions and old age pensions will be payable to all persons in Poor Law Infirmaries and to certain persons in Mental Hospitals.

On July 1, 1930.—210,000 widows who reach the age of 60 prior to July 1, 1930. Widows who attain age 60 between July 1, 1930, and January 1, 1931, will be entitled to pension as from their 60th birthday.

On January 1, 1931.—85,000 widows who will be over 55 and under 60 on this date. Widows who attain the age of 55 after January 1, 1931, will be entitled to pension as from their 55th birthday.

Excepted Persons.—From January 2, 1930, on application, and during a limited period, excepted persons who are compulsorily insurable for widows' and orphans' pension (e.g., civil servants) may become voluntary contributors by the payment of 11 pence a week over and above the present deductions for widows' and orphans' pensions; 9 pence a week in the case of persons who are compulsorily insurable for old age pensions. This secures all benefits (apart from free medical attendance) and old age pensions at 65. Application should be made at once through the Approved Societies.

Pensions Overseas

All persons who have lost old age pensions, widows' pensions or orphans' pensions, as a result of migration to the Dominions and Colonies overseas, may have the pension paid in the country of adoption; after January 2, 1930, pensions under the Contributory Pensions Acts are payable throughout the British Empire.

These privileges do not apply to the United States of America or any foreign country outside the British Empire.

Pre-Act Widows With Children

In cases where the pension has ceased owing to a child reaching the age of 14½, the pension will be re-issued by the Department if the youngest child is under 16 years. Pension ceases when the child reaches the age of 16, or in the case of a child who, on the date when it attains the age of 16, is under full-time instruction at school, the date on which it ceases to be under such instruction, or July 31 next following the date of attaining the age of 16, whichever is the earlier. If the widow is over 60 on July 1, 1930, or over 55 on January 1, 1931, and the child is under 16 on the relative date, the pension is for life or until remarriage. If under these ages when the youngest child is 16 plus, the pension will

be re-issued as soon as the widowed mother reaches the age of 55.

From January 2, 1930, children's pension allowances are payable in full. No deduction is made in respect of compensation under the Workmen's Compensation Acts.

In all cases where the husbands died before the first Insurance Act of 1912, the widows are eligible for pension—those aged 60 on July 1, 1930; those aged 55 on January 1, 1931—provided their husbands were in the "insurable class." This class covers all manual workers irrespective of income, and all non-manual workers who earned less than £160 a year. The "insurable class" also includes share fishermen and manual labourers under contract, i.e., the new classes which were brought into insurance under the National Health Insurance Act, 1928.

Widows of insured men, or men who were insured within three years of their death will be eligible for a pension if 60 years of age on July 1, 1930; if 55 years of age on January 1, 1931; if under 55 on January 1, 1931, on reaching the age of 55.

The Contributory Pensions Act, 1925, did not provide a widow's pension for the widow of a man who was aged 70 on January 4, 1926, unless she had a child under the age of 14 when she became a widow; under the Act of 1929 the widows will be eligible for pension as from the same date as that given above in regard to pre-Act widows.

Men and women refused old age pensions or a widows' pension because they or their husbands, in the case of widows, had not the average number of contributions during the three years prior to reaching the age of 65, or to the date of death, as the case may be, will receive pension provided they have been continuously insured for at least ten years on attaining the age of 60. This will also apply to future applicants for old age pensions on reaching the age of 65 or for widows' pensions.

The Minister of Health may authorize provisional payment of old age pensions while enquiries are being made for proof of age. This obviates a person being deprived of sickness or unemployment benefit on the one hand, or old age pensions on the other. The insured person must receive one or the other if qualified.

CANADIAN DOCTORS AND HEALTH INSURANCE

AN ARTICLE by Dr. J. H. MacDermott of Vancouver has been reprinted from the *Canadian Medical Association Journal* in pamphlet form. The paper was written before the publication of the report of the British Columbia Commission on Health and Maternity Insurance, which was reviewed in the last issue of the Labour Gazette, page 400; but the writer was aware of the strong movement in the province in the direction of this reform, stating that "there can be no doubt that health insurance will come, whether we, as a profession, like it or not." He recommends the Canadian Medical Association to prepare for this eventuality: "We do not want the history of health insurance in England to repeat itself here. There the medical profession was taken by surprise, and suddenly saddled with an ill-considered political scheme, and while it is to their credit that they have loyally done their best to make it a success so far as this could be done, yet they felt that they were unfairly and discourteously treated. Probably it was to some extent their own fault. We must see to it that such a fault will not be ours."

Health insurance is defined by the writer as "the assumption by the community, through its government, of the control of sickness, its cure and prevention, on a basis of contributory payment by those insured, i.e., the wage earners and those whose income falls below a standard to be decided on."

On the question of jurisdiction Dr. MacDermott suggests that "it would no doubt be better if health insurance were a matter of federal legislation, but we are advised that this cannot be done. Health is one of the matters within the control of the provinces and not of the Federal Government; and legislation must be provincial, at the outset at least. Later, unification of various provincial schemes may, and no doubt will, be effected."

Discussing the expense involved for wage earners in medical treatment under the present system, the writer points out that "the working man, in British Columbia at least, has an average income of about $1,000 a year. Most of this goes to pay rent, board, and clothing, and if he has a family, his margin is not going to be large. If he contracts acute appendicitis, or his child needs a tonsillectomy, the bills he incurs, added to loss of wages when he himself is sick, with hospital and incidental expenses, are well-nigh ruinous. It is greatly to the credit of the wage-earner that he is in many ways the most satis-

factory patient we have. He pays his bills, perhaps in instalments, but usually in full. But sickness is a tremendous financial burden under our present system. This is one great reason for the growing demand for health insurance. We must add, too, the increasing prominence of hospital treatment in disease, its great advantages making it almost an essential."

Elsewhere, Dr. MacDermott refers to the effects of the workman's loss in working time caused by sickness. "How can a workman earning $1,000 a year," he asks, "pay the premiums necessary to give him $20 or even $15 a week? We know it cannot be done. Our investigations show us that the average working family in British Columbia has, at any given time, one week's wages between it and actual pennilessness. We find, also, that the average time-loss through illness, for the worker is about seven days. The deduction is obvious. If we were all average people, and were sure of only seven days' illness each, the consequences would not be grave; but illness averaged is only for use for statistical purposes, and is only of value if it leads us also to distribute cost."

The writer suggests that any system that may be introduced should fulfil the following requirements:—

1. The service given should be a complete one.

2. Choice of physicians should remain, as now, with the family or patient, provided the physician is properly qualified, and conforms to the rules laid down by the Legislature.

3. Payment for service should be on the basis of work done, according to a schedule on a definite percentage of our present schedule or one to be arranged with that as a standard.

4. Provision should be made for adequate health and preventive work. This should be completely separated from therapeutic work, and be on a different basis of payment.

5. In an ideal scheme, time loss should be compensated for.

Analogy of Workmen's Compensation

The analogy of workmen's compensation is drawn to prove that these conditions can all be met:—"The operation of this Act (that is the Compensation Act of British Columbia), has been of immense value as a laboratory experiment, with a view to wider application of the contributory idea. Mr. E. H. Winn, the well-known and most efficient chairman of this Board, has very strong views on this subject. He is entirely convinced that health insurance is necessary; also that it is practicable. His first conclusion is based on a wide and thorough knowledge of social conditions in British Columbia as well as elsewhere. As chairman of the Widows' Pensions Fund, which is administered by the Workmen's Compensation Board, he has had unusual opportunities to see the results of poverty, and the need of medical aid and a proper system of health insurance. He has had twelve years' experience with the Workmen's Compensation Board, and has told us that he is convinced (*a*) that health insurance is necessary; (*b*) that it can be successfully put into operation; (*c*) that such operation should be on the lines of the Workmen's Compensation Act; (*d*) that in this country the system of capitation payment and appointment of panel doctors would never do; that there should be the freest choice of doctor, that specialists, consultants, laboratory and x-ray work, etc. should all be freely available where necessary, and that payment should be by schedule of fees for work done; (*e*) that the medical men could be safely left to do their share honestly and satisfactorily. His experience of medical men has, apparently, not discouraged him, and he finds the vast majority workable with and responsive to his appeal for co-operation; (*f*) he is particularly interested in the preventive side."

Brotherhood of Locomotive Engineers

The regular triennial session of the Dominion Legislative Board of the Brotherhood of Locomotive Engineers convened in Ottawa on April 28. This board is composed of the chairman of the Provincial Legislative Board of each Province except Prince Edward Island. The meeting was attended by Messrs. T. J. O'Neil, Kamloops, B.C.; D. Cameron, Edmonton, Alta.; T. N. Bryans, Sutherland, Sask.; William Hill, Brandon, Man.; J. T. Wilson, North Bay Ont.; P. Tremblay, Montreal, Que.; R. G. Jefferson, Moncton, N.B. and T. A. McIntosh, Halifax, N.S. The following officers were also in attendance, Messrs. R. H. Cobb, assistant grand chief engineer; W. G. Dewar and G. E. A. Stone, general chairman of the Atlantic and Central Regions, J. B. Ward, general chairman of the Canadian Pacific Railway division and Byron Baker, Dominion legislative representative. Many matters of interest to Canadian members of the organization were discussed at the meeting. The following officers were elected for the ensuing term: Messrs. Wm. Hill, chairman; R. G. Jefferson, vice-chairman; J. T. Wilson, secretary-treasurer. Mr. Byron Baker was re-elected Dominion Legislative representative.

COMBINES INVESTIGATION ACT

Prosecution Proceedings in Case of the Alleged Combine in the Plumbing and Heating Industry in Ontario

FOLLOWING the investigation by Mr. Gordon Waldron, K.C., into the Amalgamated Builders Council and other related organizations, the Minister of Justice, in February, 1930, appointed Messrs. A. G. Slaght, K.C., and J. C. McRuer, K.C., as counsel to take proceedings against parties to the alleged combine. References to the investigation and subsequent proceedings appeared in the Labour Gazette, August and December, 1929, and January and February, 1930.

On April 25, 1930, under instructions from Messrs. Slaght and McRuer, searches were conducted and documents seized by the Royal Canadian Mounted Police at the premises of twenty-one plumbing contractors and other alleged parties to the combine in the cities of Windsor, London and Toronto. Informations were laid before the Police Magistrate in Windsor on April 26 against thirty-three persons and companies involved in the combine. Of this number, eleven were Windsor plumbing and heating contractors, six were Windsor sheet metal and roofing contractors, and five were companies operating plumbing supply jobbing houses in Windsor. Four of the eight charges against each related to violations of the Combines Investigation Act and included charges of combination to the detriment or against the interest of the public in limiting facilities for supplying and dealing, fixing a common price, enhancing prices and preventing or lessening competition, in relation to plumbers' and other builders' supplies or to services in connection with the installation thereof. The remaining four similar charges were laid under the Criminal Code, section 498.

Proceedings in London were commenced on May 3, when informations were laid before the Police Magistrate against seventeen persons and three companies. Of the nine informations laid, four were concerned with violations of the Combines Investigation Act, four with violations of section 498 of the Criminal Code, in offences similar to those in Windsor. The remaining charge was one of conspiracy to defraud, in violation of section 444 of the Criminal Code.

At both Windsor and London the information included the names of the Canadian Plumbing and Heating Guild, a non-share Ontario corporation, the Dominion Chamber of Credits, Limited, each with head office in Toronto, and five Toronto residents associated with these two organizations and the Amalgamated Builders' Council.

Preliminary hearings of the above cases were arranged to take place before Police Magistrate Brodie in Windsor on May 5, and before Police Magistrate Scandrett in London on May 12.

Mineral Industry in Ontario

In the course of an address delivered before the Montreal Branch of the Canadian Institute of Mining and Metallurgy on April 11, the Hon. Charles McCrea, Minister of Mines for Ontario gave an address showing the importance of the mining industry in the province. In the course of his address, Mr. McCrea traced the growth of the principal mining camps. In 1900, he said Sudbury was the only active camp, and it was small and still struggling. Cobalt gave a new impetus to mining and was followed rapidly by Porcupine and Kirkland Lake. The Sudbury camp, Mr. McCrea said, is one of the leading mining areas in the world. From its output of 414 million dollars, it has paid dividends of 120 millions, and is only well started on its career. In the past four years, 40 millions have been spent in expansion and 10 millions more is required to complete the program. In 1901 the population was 2,000; now it is close on 20,000. International Nickel now employs 7,500 men at Sudbury and 1,500 at Port Colborne. Mr. McCrea anticipated that the industry of the nickel district would be virtually a permanency. Already the known deposits are the greatest in size and value known in the world, and yet they are only imperfectly explored.

What this industry means to Ontario and to Canada at large was exemplified in some extensive lists of figures given by Mr. McCrea. For example, the railways are paid hundreds of thousands of dollars each year for freight on ore and matte alone. The smelters consume 18,000 tons per month of coke and the same of coal. The Frood requires 1 million to 1½ million feet a month of timber. Among the numerous orders in Montreal are 30,000 tons of structural steel from Dominion Bridge Company.

The general business created by the Port Colborne refineries is correspondingly important. Coal and coke are consumed each to the amount of 300 tons monthly. 300,000 gallons of oil is required a month, as well as 4,000 tons of nitre cake, 3,000 tons of soda ash and other supplies in proportion. The power used there is 30,000 horse-power.

NATIONAL CIVIL SERVICE COUNCIL

THE following Report of the Committee of the Privy Council was approved by His Excellency the Governor General on the 7th May, 1930.

P.C. 970.

The Committee of the Privy Council have had before them a report, dated 6th May, 1930, from the Minister of Labour, directing attention to the Votes and Proceedings of the House of Commons of Tuesday, March 27th, 1928 and Thursday, March 29th, 1928; and more specifically to the second report presented to the House from the Select Standing Committee on Industrial and International Relations and to the record of the adoption of the said report by the House, contained therein.

It will be observed that by adopting the said report the House endorsed "the principle of the establishment by the Government of a National Civil Service Council, composed of representatives of the Government and the organized Civil Service in equal numbers, to consider and advise the Government upon matters of mutual concern to the Government and civil servants in their respective capacities as employer and employees, also as to the establishing of any other consultative and advisory machinery that may be required." And further, the House agreed "that, as the form of constitution for such a council, covering its scope and functions, can best be determined by joint agreement between the parties concerned," a committee should be set up by the Government, representing both the Government and the civil service organizations, to draft a constitution for such a National Civil Service Council, any such constitution to be subject to the approval of the Governor in Council.

Having in mind the foregoing, the Minister submits that the time would now appear appropriate for the taking of the initial step suggested by the report above quoted.

The Committee, therefore, submit for Your Excellency's approval the following recommendations of the Minister of Labour:

1. That a National Civil Service Council Drafting Committee should forthwith be constituted, to draft a constitution for a National Civil Service Council.

2. In establishing such a Committee there first arises the question of its membership. The policy of giving equal representation to civil service organizations and to the Government should be observed.

3. Representation of Civil Service Organizations:

The Department of Labour has record of some twenty-eight organizations of civil servants throughout the country, varying, in respect to their memberships from about seventeen to over eight thousand. Obviously, with such a comparatively large number of organizations existing, giving direct representation to them all would not be practicable, in view of the fact that the setting up of a committee of at least fifty-six members would be involved thereby. Selecting those organizations reporting five hundred or more members, it is observed that there are ten which fall into this category. These organizations represent substantially all classes of civil servants organized, covering practically all branches of the service in which there is organization, and they include an overwhelming majority of the organized civil service. These ten organizations should be given representation on the Committee. While not directly represented under this plan, several of the smaller organizations will be represented through affiliation with one or other of the larger bodies. In order to represent as many bodies as may be possible while still limiting the size of the Committee to a reasonable figure, numerical differences among organizations should be overlooked when determining representation, and if each of these ten organizations had one representative to speak for it, even though these differences in size exist, the representation would be as satisfactory as would be practical in the circumstances. Moreover, as an approach to unanimity on the part of all those interested is desirable, voting strength is unimportant. It is therefore recommended that each of the following organizations be invited to select one of the members of the aforementioned Committee:—

1. Amalgamated Civil Servants of Canada.
2. Civil Service Association of Ottawa.
3. Civil Service Federation of Canada.
4. Dominion Customs and Excise Officers' Association.
5. United Postal Employees of Canada.
6. Dominion Public Works Federation.
7. Dominion Railway Mail Clerks Federation.
8. Federated Association of Letter Carriers.
9. Halcyon Club of Ottawa.
10. Professional Institute of Civil Servants.

4. Representation of the Government:

To constitute the Government's side of the Committee, it is recommended that the Minister in charge of each of the undermentioned

Departments, or such other person as he may designate, shall act to represent the interests of his department, and in a general way, of the Government. The Departments selected are those which are considered to have a chief interest in the question of a National Civil Service Council. These Departments are as follows:—

1. Department of External Affairs.
2. Department of Finance.
3. Department of the Interior.
4. Department of Justice.
5. Department of Labour.
6. Department of National Revenue.
7. Post Office Department.
8. Public Works Department.
9. Department of Secretary of State.
10. Department of Trade and Commerce.

5. Civil Service Commission—There shall be one representative of the Civil Service Commission named to the Committee.

6. It is recommended that the Chairman of the Committee shall be a Minister, to be named by the Governor in Council.

7. Procedure:

The Committee shall meet at the call of the Chairman. In order to expedite the business of the committee, and in order that a constitution may be drafted which will be acceptable to both the Government representatives and to the civil service organizations, the latter should empower their representatives to speak in their behalf.

8. While the Committee should consider all matters deemed by it to be relevant to the subject of reference, the following questions are suggested for consideration as a guide:

(*a*) What should be the size of a National Civil Service Council?

(*b*) How should its members be chosen?

(*c*) What should be the scope of the Council's discussions?

(*d*) What should be the general limts of the Council's functions?

9. The Committee shall likewise consider any written statements on the subject submitted by those organizations not directly represented.

10. After the Committee has concluded its deliberations, its report shall be submitted to the Governor in Council for consideration and approval.

11. It is recommended that travelling expenses incidental to attending the committee's meetings incurred by those attending from points other than Ottawa should be defrayed by the Government. It is further recommended that civil service organizations' representatives attending the meetings of the Committee shall be accorded special leave of absence with pay for the purpose, by their respective Departments.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

EMPLOYMENT IN THE DOMINION CIVIL SERVICE, 1928-1929

THE fifth annual report on Statistics of the Civil Service of Canada, dealing with the numbers of employees of the various departments and the expenditures on their salaries and wages during the fiscal year ended March 31, 1929, has been issued recently by the Dominion Bureau of Statistics. The total number of employees on March 31, 1929, showed an increase of 1,547 over the total number employed at the end of the previous fiscal year, there being 42,790 permanent and temporary civil servants in Dominion Government service at the close of the fiscal year under review. Of this total 28,055 were permanent, and 14,735 were temporary employees.

The total expenditure or salaries and wages for civil servants during the fiscal year amounted to $87,584,764.95. Of this amount, $48,118,901.48 was expended on salaries of permanent employees; $16,682,691.29 on temporary employees; while $22,783,172.18 was paid out for salaries and wages of the non-enumerated classes. Comparing the fiscal year 1928-29 with 1927-28, there was an increase of $1,435,824.20 in salaries of permanent emloyees; an increase of $1,390,781.61 in salaries of temporary employees; and an increase of $2,446,712.07 in the salaries and wages of non-enumerated classes.

The non-enumerated classes consist of employees engaged by several departments in work of a casual nature. The number of such employees is not available, though the expenditure on wages and salaries is recorded.

In the following table the total number of permanent and temporary employees in the entire civil service and the total salary expenditure for March, 1929, are detailed. In several of the larger departments there are important branches under distinct supervision apart from the main department, and in such cases statistics are shown separately.

NUMBER OF EMPLOYEES, AND SALARIES OF VARIOUS DEPARTMENTS OF DOMINION GOVERNMENT

Department	*Number of employees March, 1929	Salaries and wages March, 1929

Trade Unionism in Japan

"*Social Reform*" (Shakai Seisaku Jiho) a monthly journal published at Tokyo, gives the following account of trade union organization in Japan:—

Statistical figures at the end of June, 1929, were as follows:—

Industries	Total Workpeople	Organized Workers
Factory-workers	2,193,568	158,758
Miners	246,786	6,212
Transports and Communications	490,548	129,906
Casual and other workers	1,900,912	26,249
Total	4,831,815	321,125

"The number of women in trade unions at the same period is 13,304 or 4 per cent of the total organized workers.

"As to the method of organization, there is an evident tendency to decrease in the number of craft or occupational unions, the most important trade union under this category being the Shosen Doyukai, organized by cooks and other workers in the catering departments on board merchant ships, with a total membership of 1,700. The trade unions in Japan as a rule adopt the principle of industrial unionism. Besides the three National Centres of trade unionism, the Sodomei General Federation of Labour, the Kumiai Domei (All-Japan Federation of Trade Union) and the Sorengo (Confederation of Trade Unions), there came into being a new organization known as the National Council of All-in Industrial Labour Unions during 1929. This is a general trades union organized by those Communist leaders who, objecting to illegal activities, aim at the unification of industrial unions.

"Since the Government dissolution of the Hyogikai (National Council of Trade Unions) in 1928, the Communist leaders of trade unions have organized a new national centre, National Conference of Trade Unions (Kyogikai), which is a rallying centre for Communist trade unionists. In the meantime, the moderate wing of Communist trade unions established a rival organization, National Council of All-in Industrial Labour Unions, mentioned above."

WORK OF THE DEPARTMENT OF LABOUR OF CANADA

Address Broadcast Over the Canadian National Railways Radio System by Mr. H. H. Ward, Deputy Minister of Labour, Ottawa, April 24, 1930

IN speaking to-night upon the subject of the Department of Labour in this series of departmental broadcasts arranged by the Professional Institute of the Civil Service of Canada, I shall endeavour to trace the history of this particular Department of Government, to indicate its position in our scheme of Federal governmental organization, and to explain in some little detail just what functions the Department of Labour normally performs for the public.

Unlike many other departments of state, which may claim counterparts in the various Governments of the world for centuries, a department of labour is wholly a product of modern conditions, and its inception in the case of the Government of Canada is relatively recent. The standard function of a department of labour is to administer legislation on social and labour matters; and since such legislation has been necessitated in large part by circumstances which have attended the development and mechanization of industrial organization in recent times, it might therefore be said that these modern conditions have created departments of labour.

The general function of the Dominion Department of Labour is to administer, under the direction of the Minister of Labour, legislation on labour matters passed by Parliament, but there are very real limits imposed in respect of the classes of such laws that may be enacted by the Parliament of Canada. These limits grow out of the fact that we have a federal system of government, with a consequent division of powers between the Dominion and the provinces. Our written constitution, the British North America Act, gives to the Dominion Parliament power to enact laws regarding the regulation of trade and commerce, census and statistics, navigation and shipping, naturalization and aliens, and, generally, for the peace, order and good government of Canada in relation to all matters not coming within the classes of subjects assigned exclusively to the provincial legislatures. Therefore, legislation administered by the Department of Labour must necessarily be subject to the legislative jurisdiction of Parliament.

The inception of the Department of Labour dates from the year 1900. It was established in that year by the enactment by Parliament of the Conciliation Act, which provided it with two main functions: first, that of seeking to prevent strikes and lockouts in industry, by voluntary conciliation; and second, the collection of information on social and economic matters, and its publication in a monthly magazine, the LABOUR GAZETTE. Another function which fell to the lot of the Department as a result of the Session of the same year was that of the work incidental to a resolution then adopted by Parliament declaring for a fair wage policy in the matter of works and contracts carried on for the Government of Canada. Though in the intervening years the principles and legislation underlying these three functions have been altered to meet circumstances, though other functions have been added to the work of the Department from time to time, the three matters of conciliation in industrial disputes or threatened disputes, the collection and publication of information on economic, social, and industrial problems, and the administration of the Dominion Government's fair wage policy still remain among the more important phases of the Department's work.

When the Department was first established, for the purpose of administration it was placed under a minister of another department, and from 1900 to 1909, successive Postmasters General were likewise Ministers of Labour. However, the Department of Labour Act of 1909, which amended the previously existing statutory basis for the Department, provided for a Minister of Labour holding no other portfolio, and the first Cabinet officer to occupy the newly created portfolio was the present Prime Minister, the Right Hon. W. L. Mackenzie King. Mr. King had previously been associated with the Department in the capacity of Deputy Minister from its inception in 1900 until 1908. The present Minister of Labour is the Hon. Peter Heenan, who has presided over the destinies of the Department since September, 1926.

The work of the Department of Labour in its main divisions may be summarized as follows:—

I. Conciliation and Arbitration in Industrial Disputes.—Mention has already been made of the Conciliation Act of 1900, which, modelled on a British statute of 1896, established the Department of Labour as a branch of government. This Act introduced certain features for the solution of industrial difficulties

that have later, through a process of evolution, become the accepted practice in handling such matters. Provision was made for the appointment of officers who would be available to proceed to localities where industrial strife existed or threatened and to endeavour in the interests alike of employers, employees and the public to effect amicable settlement.

In 1907 a further important advance in legislation to obviate or settle industrial disputes was recorded by the enactment in that year of the Industrial Disputes Investigation Act, "an Act to aid in the prevention and settlement of strikes and lockouts in mines and industries connected with public utilities." This measure, frequently called the "Lemieux Act" from the name of the Minister who presided over the Department at the time of its passage, is one of the most widely known measures looking to the settlement of industrial disputes. The Act seeks to prevent an actual strike or lockout until the Minister of Labour has appointed a board of conciliation and investigation, consisting of a nominee of the employees, a nominee of the employer, and an impartial chairman. From the date of the enactment of the Industrial Disputes Investigation Act in 1907 to March 31, 1930, there were 730 disputes dealt with under this statute, in 500 of which cases boards were established, and in only 38 cases was a strike or lockout not averted or ended. It is interesting to observe that this Act has been the subject of study and has in fact been used as a model for conciliation legislation in many parts of the world. It was the inspiration for laws in Transvaal, Queensland, New Zealand, Colorado, and Japan. Other governments, notably those of Mexico, Chile and South Australia, have since had it under consideration, with a view to proposing similar legislation within their jurisdictions.

Even apart from cases where the Minister has legal power to interfere, the officers of the Department regularly mediate on the request of interested parties in cases of dispute, and many cases have been most amicably settled as a result.

II. The Fair Wage Policy of the Dominion Government.—Reference was previously made to a resolution of the House of Commons of 1900 establishing for the Dominion Government a fair wage policy in connection with works carried on under contract and supplies being procured under contract for the Government of Canada, as well as on works aided by Federal funds. This policy provides that wages and hours in connection with work of the class mentioned should be such as obtain in the district where the work is being carried on, or otherwise be such as are considered fair and reasonable. The work involved for the Department of Labour in this respect has been considerable, for in cases where the question is raised the actual determination of the rates to be paid and the hours to be worked rests with the Minister of Labour and his Department, and where workmen complain that the fair wage policy is not being adhered to it is the Department of Labour which has the responsibility of investigating and adjusting such complaints. At the present time there is under consideration by Parliament a measure which has been introduced by the Hon. Peter Heenan, for the purpose of clarifying the scope and intent of this fair wage policy.

III. Employment Service Branch.—Although the institution and maintenance of public employment offices is primarily a matter of provincial jurisdiction the Department of Labour, in pursuance of the Employment Offices Co-ordination Act of 1918, subsidizes the provinces for the carrying on of such work. Under this statute the Department annually pays to the provinces a total of $150,000, in return for which the co-operating provinces undertake to perform Employment Service work on a uniform plan. Through the Department of Labour a special facility by means of a reduced transportation rate has been secured from the railways for the transfer of workers from point to point throughout the country when such action is necessary. The Department of Labour also makes special financial provision for placing officers in the provincial government offices to devote their time and attention to the specialized placement in industry of handicapped veterans of the late war. Some idea of the magnitude of the employment placement work assisted by this branch of the Department of Labour may be gained from the statement that in the last calendar year the Employment Service of Canada placed approximately 400,000 men and women in various classes of employment through offices located at sixty-six centres, and this without any charge to employer or employee.

IV. Technical Education.—Under the Technical Education Act of 1919 the Dominion Government, through the Department of Labour, undertook to assist the provinces in equipping themselves with technical educational facilities of less than college grade, for a period of ten years. Ten million dollars for payment to the provinces on a fifty-fifty basis was provided, and though the Act expired in

1929, an amending Act carried forward for a further five-year period the remainder of the grants in respect of provinces that had not earned their quota. Schools assisted by these grants showed an enrolment in daily vocational classes in 1928-29 of 45,617 and at evening classes at 192 centres throughout the Dominion of 73,877.

V. Old Age Pensions.—In 1927 Parliament passed the Old Age Pension Act providing for a Dominion-Provincial Old Age Pension system. While the administration and payment of pensions is entrusted to the provinces, the Federal Government, through the Department of Labour, reimburses each province to the extent of one-half of the sum disbursed for such pensions. To become effective in any province this scheme requires provincial legislation and the financial co-operation of the provincial government. The Federal grant is dependent upon each province concluding an agreement with the Dominion to pay pensions in a stipulated fashion. Pensioners must be British subjects of more than twenty years' residence in Canada and of more than five years' residence in the province, who are at least seventy years of age. The maximum pension is twenty dollars per month, with an equitable deduction for annual income over $125. The scheme is now in effect in a majority of the provinces, namely, British Columbia, Saskatchewan, Manitoba, Alberta, Ontario and the Northwest Territories. In addition, New Brunswick has just passed an Act, while consideration is being given to the subject in other provinces. On March 31 last there were already approximately 43,000 old age pensioners in Canada.

VI. Annuities Branch.—In order to assist persons to accumulate a competence for their old age out of earnings and savings, this branch of the Department of Labour sells annuities to the public on practically any of the recognized bases normally employed in annuities work. Annuities may be either of the immediate or deferred types and may be purchased for a return annually of any amount from ten dollars to five thousand dollars.

VII. Combines Investigation Branch.—The Combines Investigation Act, administered by the Minister of Labour, provides for the investigation of alleged combines in restraint of trade, and for prosecutions where it is found that such combines actually exist. Investigation may be carried out either by the Registrar of the Act, who is an officer of the Department, or by a special commissioner appointed by the Governor in Council. Outstanding investigations made under this Act have been those connected with combines alleged to exist in the distribution of fruit and vegetables in Western Canada; the coal business in Winnipeg; the bread trade in Montreal; the marketing of Ontario fruits and vegetables; the marketing of potatoes in New Brunswick; the wholesaling and retailing of drugs; and certain plumbing and heating interests. In addition to these more extended investigations many lesser complaints have been investigated dealing with various cases of reported combine activity.

VIII. The International Labour Organization:—Canada being a member of the League of Nations is consequently affiliated with the International Labour Organization which was established by the Treaty of Versailles and the other treaties of Peace which concluded the Great War. The Government of Canada has permanent representation on the Governing Body, that is, the Executive of the International Labour Organization, and Canada is also regularly represented at the different conferences which are usually held once a year. The Department of Labour is the Department of the Canadian Government primarily charged with the responsibility of maintaining our liaison with this organization, which looks to a uniform betterment of working conditions throughout the countries of the world.

IX. Information Services:—The range of subjects regularly studied and reported upon by the Department of Labour comprises practically all the major branches of social and economic topics embraced in the general title of Labour problems. Statistics are regularly collected on the subjects of strikes and lockouts, industrial accidents, trade union unemployment, public employment office records, cost of living, prices and wages. This information is regularly published in the official publication, the LABOUR GAZETTE, which, incidentally, will complete its thirtieth year in September next. Annual reports on labour legislation enacted by the various legislatures and the Parliament of Canada, and on the subject of trade union organization in Canada are also compiled for distribution. In addition the Department of Labour periodically carries out studies in various classes of labour research and special volumes are issued from time to time dealing with these questions. A valuable library on economic and social subjects has been assembled and maintained by the Department

Enough has been said in the foregoing sketch of the functions of the Department of

Labour to indicate in a general way the nature of its work. To sum up, it may be looked upon as an institution of a most human character. All of its work centres around the betterment of industrial, social and living conditions, particularly in so far as those engaged in industry as employees are concerned. It treats of Canada's citizens regardless of their occupation, as members of society deserving the utmost attention. Though its scope, due to the limitations on Parliament's legislative powers in respect of labour legislation, is necessarily limited, it does endeavour, within the limits laid down, to promote industrial peace, and to maintain healthy, economic and social conditions throughout the whole Dominion.

LABOUR LEGISLATION IN QUEBEC, ONTARIO AND BRITISH COLUMBIA IN 1930

Quebec

A NUMBER of measures of labour interest were enacted during the Session of the Quebec Legislature which opened on January 7 and closed on April 4, 1930. These included a law providing for a social insurance commission and amendments to the existing statutes dealing with mines, industrial establishments, scaffolding inspection, women's minimum wages and technical education.

Social Insurance Commission

An Act respecting the Creation of a Commission to study a System of Social Insurace for the Province provides that the Lieutenant-Governor-in-Council may appoint a Commission, called "Quebec Social Insurance Commission," consisting of not more than seven members, one of whom is to be appointed president. The Lieutenant-Governor-in-Council is further empowered to fix the indemnity of the members and the conditions under which their functions shall be exercised and also, on the recommendation of the Minister of Public Works and Labour, to appoint the accessory staff.

The Commission is charged with the study of the situation respecting the establishment of a system of social insurance and of family placement and the kind of legislation to be adopted in that respect, and is vested with the powers conferred by Sections 9-13 inclusive, of the Public Inquiry Commission Act which include among other things the authority to summon witnesses and take evidence under oath and to require the production of papers and documents. The Commission must proceed with all possible diligence and as soon as the work is finished report to the Lieutenant-Governor-in-Council. The administration of the Act is in the hands of the Minister of Public Works and Labour.

Education

An Act respecting Agricultural Schools and the Construction of Warehouses and concerning the Société Co-opérative Fédérée des Agriculteurs de la Province de Quebec provides for an appropriation of $600,000 for the establishment, enlargement, furnishing and equipment of agricultural schools.

The Technical Education Act was amended to permit the expenses connected with the office of the Director to be paid out of the Consolidated Revenue Fund.

Hours of Work in Factories

An amendment to the Industrial Establishments Act reduces the maximum normal working hours of women and girls and of boys under 18 years of age from 60 to 55 hours per week.

Women's Minimum Wages

The Women's Minimum Wage Act was the subject of a number of amendments. The scope of the law was extended to include workshops which form part of commercial establishments. The Minimum Wage Commission was given jurisdiction over hours of labour and overtime rates as well as minimum wages. The penalty for violating an order of the Commission was raised from $50 to $100.

The scope of the Scaffolding Inspection Act was widened to include lifts.

Bureau of Mines

An amendment to the Mining Act provides for the establishment of a Bureau of Mines in charge of a Director of Mines as a special division of one of the Government Departments. The Minister in charge of that Department under the title of Minister of Mines will administer the Act.

An amendment to the Motor Vehicle Act repeals those portions of the Act referring to chauffeurs' badges and also makes it an offence to give a fictitious age in applying for a licence or permit.

A section added to the Workmen's Dwelling Act provides that in the event of nonpayment of loans made under the Act the Council of a municipality which has made

such loans may order the Secretary-Treasurer of the Municipality to draw up a complete statement of the lands and buildings affected, the sums due and the name and address of the last registered owner. When the statement has been furnished the Council may order the sale of such land and buildings.

Bills not Passed

Several measures of labour interest were introduced but failed to pass. A Bill to amend the Code of Civil Procedure in reference to the issue of injunctions was dealt with in the March issue of the LABOUR GAZETTE at p. 256.

A Bll providing for a minimum wage for men was described in the April issue of the LABOUR GAZETTE at p. 361.

A Bill to amend the Election Act by providing among other things for advance polls in the city of Hull, could not be adopted as no previous resolution was introduced.

Ontario

In the course of the Session which opened on February 5 and closed on April 3, 1930, a number of laws of labour interest were passed. These included amendments to the laws relating to mines, prevention of silicosis, mothers' allowances, old age pensions and school attendance and a re-enactment of the Vocational Education Act with some changes.

Mining Act

An Act to amend the Mining Act re-enacts Part VIII, which deals with the operation of mines, making many changes to conform with present day mining practice and to further implement the recommendations made by Mr. Justice Godson in his Report on the Hollinger Mine disaster (LABOUR GAZETTE, November, 1928, page 1206, etc.).

Mine rescue stations are to be provided and maintained at such points in the province as the Minister of Mines may direct and be equipped and kept in such a manner as may be required by the Chief Inspector, the necessary funds being furnished by the Workmen's Compensation Board from money collected from the mining industry. Each mine rescue station is to be in charge of a person or persons appointed by the Chief Inspector to train mine rescue crews to use the rescue apparatus and to maintain it in workable condition. The owner, agent and manager of each mine are charged with the duty of causing such number of men as the Inspector deems necessary to be trained in the use and maintenance of the apparatus.

An eight-hour day is established for operators of hoisting engines. Exemption is permitted, however, for several causes. In case of absence of one of the regular hoistmen, if no competent substitute is available, the remaining hoistmen may work extra time not exceeding four hours per day for a period not exceeding ten days. If the mine is not worked continuously in three shifts per day the hoistmen may work such extra time as is necessary for raising or lowering the workmen at the beginning and end of each shift. Extra time may also be worked on a Saturday shift for the purpose of avoiding Sunday work or changing shift, at the end of the week or for giving any of the men a part holiday, and also in cases of emergency where life or property is in imminent danger, in cases of repair work, and in mines where the number of men working in a shift does not exceed six.

The requirement of "one month's experience" for hoistmen handling men is changed to "adequate experience." Hoistmen are required to have medical certificates which are to be renewed yearly.

A number of changes were made in the rules for the protection of miners. These rules formerly applied "except in so far as the Inspector of Mines may deem the same not reasonably applicable." Under the Act as amended the owner, agent or manager of a mine must make a written request for the suspension of any rule. The Inspector may give written permission for such suspension imposing, if he sees fit conditions or limitations, and may at any time cancel the suspension or alter the conditions.

Authority is given to mine managers to make rules not inconsistent with the rules contained in the Act or the special directions of the Inspector for the maintenance of order or the prevention of accidents. Such rules, when approved by the Minister and posted for fourteen days in a conspicuous place at the mine, become enforceable in the same manner as the rules set out in the Mining Act.

The clause placing responsibility for the carrying out of rules was redrawn to make its application more definite.

Where the Chief Inspector deems it necessary or advisable he may order refuge stations to be provided and maintained. Such stations must have water, air and telephone communications to the surface and be separated from the adjoining workings by openings so arranged that they can be closed in such a manner as to prevent gas from entering the refuge. The Chief Inspector may also recommend in writing to the Minister that a connection

between mines be established and that the connection be so made and equipped as to constitute a refuge station. If he approves of such recommendation the Minister may appoint a committee of three persons to determine the manner in which the work shall be carried out and the proportion in which the cost is to be borne by the owners of the mines affected. The committee is to make a written report to the Minister and on his approval thereof the Chief Inspector may issue an order for the establishment and maintenance of the connection and refuge (if any) in accordance with the terms of the report. The order is not subject to appeal upon any ground but is enforceable in the same manner as any order of the Chief Inspector.

A number of new rules are inserted while others are redrawn to conform with modern requirements and practice. New regulations deal with the prohibition of internal combustion engines below ground; cleanliness of magazines, thaw houses, etc.; the order in which explosives are to be used and disposal of defective explosives; prohibition of storage of explosives in a closed mine without permission of an inspector; methods of transporting detonators; examination for missed or cut-off holes before abandoning a heading and also before drilling in any working place; precautions as to broken material; lining of a shaft compartment when a crosshead is not used; construction of cages for raising and lowering workmen; installation and operation of electric hoists; arrangement of electric signal systems and of control levers of storage and trolley locomotives; and fire prevention about electrical installations.

Silicosis Act

The Silicosis Act which was enacted in 1929 and has not been put in force was amended by the addition of a section providing a penalty of from $100 to $500 for non-compliance with the law. The amendment like the principal Act comes into effect on Proclamation which has not yet been made.

Mothers' Allowances Act

An amendment to the Mothers' Allowances Act confers upon the Secretary of any local mothers' allowances board power to take declarations and affidavits and to receive evidence under oath. Burlington Beach is recognized as a separate municipality for the purposes of the Act and the Burlington Beach Commission is endowed with the powers of a local board. A further clause declares that a member of a municipal council may be appointed a member of a local mothers' allowances board without disqualification as a member of the council.

Old Age Pensions Act

The Old Age Pensions Act was amended to provide for the appointment by a county, city or town council of a local old age pensions board. A member of the council may be appointed to the board and is entitled to the same remuneration for his services as he would receive when acting as a member of a committee of the council. Clauses were added to the Act similar to those inserted in the Mothers' Allowances Act with regard to administration of the oath by a secretary of a local board, validity of appointment of members of councils to local boards, and with regard to Burlington Beach. As from November 1, 1929, provision is made for meeting the cost of pensions and administration by appropriations of the Legislature or, failing such, from the Consolidated Revenue Fund of the province.

Education

Provision is made by an amendment to the School Attendance Act for the compulsory attendance of a child "at the school which he is required or entitled to attend" thus permitting education of children at special schools for the disabled or the delinquent. There was added to the list of valid excuses for non-attendance of a child at school that the child is officially excluded under the Schools Act or regulations. Provision was made for the appointment by the Minister of Education of a committee to determine who is a fit subject for admission to the Ontario School for the Blind or the Ontario School for the Deaf. The power to grant certificates relieving a child from school attendance during employment is now given only to school attendance officers. Formerly a justice of the peace or a school principal might grant such a certificate. A clause was added to the Act permitting two or more school corporations in urban municipalities to appoint the same attendance officer or officers if the Minister considers that the interests of economy and efficiency will be better served thereby. Reports of teachers regarding non-attendance of pupils are in future to be made in accordance with the regulations in that behalf.

An amendment to the High Schools Act provides that the Board of Education, with the approval of the Minister, may arrange for the instruction at a vocational school in any other high school district in the province of pupils who desire to take vocational school

courses which are not provided by the board and who are the children of ratepayers in the district for which the board is appointed, and may pay the fees and transportation of such pupils. Formerly these privileges were accorded only to pupils desiring instruction at a high school or collegiate institute.

The Vocational Education Act was re-enacted with a number of changes and goes into effect in its amended form on July 1, 1930. A new subsection provides that the board, with the approval of the Minister, may arrange for the instruction in any school controlled by a high school board, continuation school board or board of education in Ontario, of children of ratepayers in the district who desire to take courses which are not provided by the board, and may pay the fees and transportation of such pupils. It is provided that no fees shall be payable by pupils having the right to attend a vocational school for general or special full-time day school courses or for part-time special courses for apprentices and employed adolescents. The optional system of administering the vocational schools, either through a single vocational committee or a number of vocational committees, is withdrawn, the former method being retained. Provision is made that advisory vocational committees shall consist of eight or twelve persons as the board may direct.

An amendment to the Apprenticeship Act provides that the Minister may require employers in any designated trade to contribute to the cost of maintaining a system of apprenticeship and administering the Act.

Chauffeurs

Amendments were made to those sections of the Highway Traffic Act affecting chauffeurs. Persons incapable of controlling a motor vehicle through the influence of drink or drugs may not drive or attempt or prepare to drive. The period during which a licence may be suspended on conviction for driving or attempting or preparing to drive while intoxicated is now six months for a first offence; three months to one year for a second offence; and not more than two years for a third or subsequent offence.

New Parts (numbered XIII and XIV) were added to the Act and become effective on September 1, 1930. Part XIII deals with financial responsibility of owners and drivers and provides among other things that the driver's licence (which includes a chauffeur's licence) of any person who has been convicted of, or has forfeited his bail after being arrested for, certain offences, shall be suspended and remain suspended until he has given the Registrar of Motor Vehicles proof of financial responsibility. The offences include reckless driving, racing, speeding, leaving the scene of an accident, driving without a licence, and any offence against public safety on highways designated by the Lieutenant-Governor-in-Council. Persons who are responsible for accidents resulting in the death of or injury to any person or damage to property in excess of $100 may similarly be required to give proof of financial responsibility and have their licences suspended in the meantime. If the Registrar finds that any any driver to whom Part XIII applies, was, at the time of the offence for which he was convicted, employed by the owner of the motor vehicle as chauffeur or motor vehicle operator and that there was no motor vehicle registered in the name of the driver as an owner, then, if the owner of the vehicle submits the necessary proof of his financial responsibility the chauffeur may be relieved of giving such proof in his own behalf. Part XIV contains sections providing for the keeping of an operating record of every chauffeur and operator and for the reporting by persons in charge of motor vehicles of all accidents resulting in personal injuries or in damage to property apparently exceeding $50.

Moving Picture Machine Operators

Those sections of the Theatres and Cinematographs Act which deal with the licensing of operators and apprentices were amended to provide for the re-examining and grading of these workers. The Inspector of Theatres is empowered to refuse, revoke or suspend any licence in his discretion, subject to an appeal to an Appeal Board appointed by the Treasurer of Ontario. The amending Act comes into force on June 1, 1930.

Other Legislation

A clause was added to the Fire Marshals Act giving power to the Fire Marshal to enter upon and inspect hotels, apartment houses, factories, workshops and other places where persons reside or are employed in numbers and direct the necessary alterations to be made and precautions to be taken for the protection of life and property.

The Negligence Act is a revision and amendment of the law relating to contributory negligence. The Forest Fires Fires Prevention Act amends and consolidates the law on that subject but the sections dealing with requisition of labour for fighting forest fires remain unchanged.

Firemen's Pensions Bill

A Bill to provide pensions for firemen in twenty-four of the larger cities of Ontario was introduced during the Session by Premier Ferguson who stated that it was the Government's intention not to pass the Bill but to distribute it to the municipalities affected and determine their opinion before next session. Under the Bill a pension fund would be established not later than January 1, 1932, by the payment by the cities in Schedule A of the Bill of the amounts set opposite their names or such larger or smaller amounts as the Superintendent of Insurance may certify to be necessary to cover accrued liability at that date. The cities included in the Schedule are as follows,—Belleville, Brantford, Chatham, Ford City, Fort William, Galt, Guelph, Kingston, Kitchener, London, Niagara Falls, North Bay, Oshawa, Peterborough, Port Arthur, Sarnia, Sault Ste. Marie, St. Catharines, St. Thomas, Stratford, Walkerville, Welland, Windsor, Woodstock.

Donations and gratuities from citizens or corporations for the benefit of the fire department, the proceeds of fines imposed upon firemen, and such other moneys as may from time to time be legitimately applied thereto by a municipal corporation are to be placed to the credit of the fund. Every fireman under 65 years of age is eligible to participate in the fund and is required to contribute semi-monthly 7 per cent of his gross wages or salary. Firemen over 26 years of age appointed after the date of the establishment of the fund are to participate unless the committee, on the advice of the medical officer, decides that he should not do so. Those over that age are not eligible to participate nor required to contribute.

The Schedule of benefits is as follows,—

SCHEDULE OF BENEFITS

(1) On resignation (except where worn out in service).

Length of service and benefit:

(*a*) 10 years and under—none.

(*b*) Over 10 years up to 15 years; Allowance of one-half of his contributions.

(*c*) Over 15 years up to 20 years; Allowance of three-quarters of his contributions.

(*d*) Over 20 years; Allowance of 20 days' salary for each full year of service completed.

(2) On resignation (where worn out in service).

Length of service and benefit:

(*a*) 10 years and under—none.

(*b*) Over 10 years up to 15 years; Allowance of 20 days' salary for each full year of service completed.

(*c*) Over 15 years up to 20 years; Allowance of one month's salary for each full year of service completed.

(*d*) Over 20 years up 25 years; pension of three-eighths salary for life.

(*e*) Over 25 years; pension of one-half salary for life.

(3) On disablement from injuries received in the lawful execution of duty, so as to be wholly or permanently incapacitated from further service as a fireman, but not from other employment:

(*a*) 15 years and under; pension of three-eights salary for life.

(*b*) Over 15 years; pension of one-half salary for life.

(4) On disablement from injuries received in the lawful execution of duty, so as to be wholly and permanently incapacitated from performing any work for compensation or profit.

Benefit: Pension of one-half salary for life.

Provided, however, that the pension to which a fireman shall be entitled under the foregoing subsections Nos. 2, 3, and 4, shall not in any case be greater than the pension specified on retirement after thirty years' continuous service, under subsection 6 hereof, but such fireman shall be entitled to receive only the maximum pension under subsection 6 of this section.

(5) On death from any cause while in the service the sum of Three Thousand Five Hundred Dollars ($3,500).

(6) On retirement after thirty years continuous service: Pension of one-half salary for life. Provided, however, that the maximum allowance shall be fixed at $2,000 per annum and the minimum $1,000 per annum.

(7) No fireman entitled to receive an annual pension for life after service of thirty years shall retire without the consent of the Municipal Council.

(8) (*a*) In estimating the length of service, those firemen who resigned or were dismissel, and were subsequently reappointed will count their service from the date of their last appointment.

(*b*) Pensions shall be payable half-monthly on the first and sixteenth days of each month.

(9) In the event of a pensioner dying before he has drawn an aggregate amount of pension equal to what his death benefit would have been under subsection 5, preceding, had he died in the service immediately before the commencement of his pension, then there will be payable the amount of the said death benefit, less the aggregate amount which he had drawn as pension.

(10) (*a*) In calculating the amount of any pension payable under the provisions of clause *c* or *e* of subsection 2, subsection 3, subsection 4, or subsection 6 of this section, the salary upon which such pension is based shall be the average salary or wages received by the person in respect of whom such pension is payable during the last three years of his service.

(*b*) In case of any other allowance or benefit provided for in this section which is based on salary, such salary shall in all cases where the applicant has served for ten years or more, be the average during the last ten years of his service of his salary or wages upon which he has paid a percentage to the Fund and in all cases where the applicant has served less than ten years, shall be the average during the whole

time of his service of the salary or wages upon which he has paid a percentage to the Fund.

New or additional benefits may be paid when the condition of the fund permits.

The fund is to be under the management and control of a committee to be known as the Firemen's Superannuation and Benefit Fund Committee consisting of one member of the municipal council appointed annually by the council, the clerk and treasurer of the municipality, the chief of the fire department and one representative of the firemen to be elected annually by the members of the department who are eligible to participate in the fund.

British Columbia

The Legislature of British Columbia during its recent session, which opened on January 28 and closed on March 25 amended a number of laws of interest to labour.

Chauffeurs' Licences.—The sections of the Motor Vehicle Act relating to chauffeurs were the subject of a number of amendments coming into force on different dates. Chauffeurs' licences are now divided into three classes: Class A entitles the holder to drive and operate every kind of motor-vehicle Class B entitles him to drive and operate motor-vehicles having a seating capacity not exceeding seven passengers including the driver; and any motor-vehicle used exclusively in transporting personal property. Class C entitles the holder to drive and operate any motor-vehicle used exclusively in the transportation of personal property. The fees for these licences are $7.50, $6 and $4, respectively. A clause is added prohibiting the employment of an unlicensed chauffeur. The above changes take effect on January 1, 1931. A subsection is added which comes into force on May 1, 1930, requiring a chauffeur driving, operating or in charge of a motor-vehicle carrying passengers for hire to have a permit from the chief of police of the municipality, which will be issued without charge. Every holder of such permit must comply with all regulations of the municipality which are not repugnant to the Motor Vehicle Act and Regulations. In the event of the refusal of a permit the Chief of Police will so advise the applicant within twenty-four hours, stating grounds for such refusal. An appeal lies to the municipal council, whose decision is final. The remaining provisions came into effect on the date on which the Act received the Royal Assent, viz. March 25, 1930. Temporary drivers' licences expire on the termination of the period mentioned in the licence. The clause giving a reduction in fees where the licence covers only a part of the year, is extended to include chauffeurs' licences.

The list of offences under the Act is amended to include the making of a false statement in reporting an accident; neglecting or refusing when signalled or requested by a police officer to stop his motor vehicle, to give correctly his name and address and that of the owner of the vehicle, or to permit his drivers' licence to be inspected.

Fire Protection.—The Fire Marshal Act was amended to provide that the fire marshal may, if he thinks it advisable, give a written order to the owner or occupier of a hotel or public building over one story in height to provide a sufficient fire escape and keep it in good repair. A "public building" is defined in the Act to include a warehouse, store, mill, office building and factory. The amendment further provides that under special circumstances a fire marshal may permit a fire escape to be constructed of some material other than metal in some other manner than by attachment to the outside of the building. In the case of an existing public building provided with fire escapes the inspector may order a new or additional fire escape. Owners in all buildings must now post notices of fire-escapes and maintain red lights and, in the case of stores, alarm-gongs required by the regulations. Formerly only buildings of two or more stories were required to comply with these rules and the alarm-gongs in stores were to be such as were required by the by-laws of the municipality. The amendment raises from $25 to $250 the penalty for obstructing or refusing to admit the fire marshal or other authorized persons or for the violation of the Act or the regulations where no other penalty is provided. The penalty for disobeying an order made under the Act is raised from $25 to $50 per day, during the continuance of the offence.

Superannuation Act.—A number of changes were made in the Superannuation Act. In case a contributor enjoys in addition to a cash salary, any emoluments, perquisites or privileges incidental to his office which are reducible to a cash value, their value, as fixed by his employer, will be deemed to form part of his salary for the purposes of the Act. The section dealing with allowances to dependants is replaced by a new section which does not contain the fifteen years' service qualification. The allowance is, however, to be based

on the service record of the deceased contributor and calculated on the single life plan in accordance with the age of the dependant. The new section applies to cases pending at the passing of the amending Act. Refund of payments is provided for in cases where the contributor has been retired before completing ten years of continuous service. Provision is made for the transfer of funds on transfer of employment and for the preservation of the contributor's rights on such transfer. The Commission before dealing with the application for superannuation of a contributor retired owing to mental or physical incapacity must obtain a report from an approved medical practitioner. A member of the Provincial Police Force, who has attained the age of fifty-five years may receive a superannuation allowance if retired from service upon his own application or upon the recommendation of the Attorney General or the Superintendent of Provincial Police.

No Provincial Government employee is entitled to an allowance unless he has served continuously for ten years. The section dealing with additional allowances in certain cases for Provincial Government employees was replaced by new provisions which apply to all persons entitled to allowances instead of to certain classes as formerly, and make a slight change in the method of computing the amount of the allowance. Provision is also made for an increase in the amount of allowances heretofore granted.

In the case of members of the Provincial Police Force appointed upon the taking charge of the policing of a municipality to which Part III of the Act applies the time served by them in the service of the municipality will be deemed to have been served in the Provincial Police Force.

Superannuation allowances will not be granted to Provincial Government employees on the single life plan unless the contributor proves that his dependants are provided for in the event of his death.

Part III of the Act which deals with municipal employees is made applicable to every person in receipt of a salary payable from the revenue of the municipality who is appointed by the Lieutenant-Governor in Council and to whom Part III is declared to apply by by-law of the municipal council.

On March 18 a motion to include employees of public utilities within the scope of the Superannuation Act was negatived.

A progress report of the Royal Commission on State Health Insurance was tabled during the session. A summary of this report was given in the April issue of the LABOUR GAZETTE, at page 400.

WOMEN'S MINIMUM WAGES IN QUEBEC

New Orders Governing Clothing and Tobacco Industries

THE Minimum Wage Board of the Province of Quebec issued on April 28 a series of new regulations, to become effective on July 1, 1930, governing the employment of female workers in the various departments of the clothing and tobacco industries. Earlier orders were outlined in the LABOUR GAZETTE, May, 1929, page 489, and in previous issues. For the purpose of the clothing industry orders and the men's overalls orders the province has been divided into three districts according to population, the most populous district being the City and Island of Montreal and a radius of ten miles around and beyond the Island; the second district including other cities and towns of 15,000 population and over; and the third district being municipalities having 15,000 population or less. In the hat, cap and millinery order, the women's and children's dresses order, and the tobacco order, the province is divided into two sections only, namely the Montreal district, and the remainder of the province. The provisions of the new orders are as follows:

Orders No. 8, 8a, and 8b, governing female employees in women's, men's and boys' clothing.

No wage shall be less per week than is set forth in the following table:—

—	City and Island of Montreal	Cities of 15,000 or over	Other municipalities
Experienced workers	$12 50	$10 00	$10 00
Beginners	7 00	6 00	6 00
After 6 months	8 00	7 00	7 00
After 12 months	9 50	8 00	8 00
After 18 months	11 00	9 00	9 00

Hours of Work.—The work period for which these minimum wages shall be paid is 44 hours in the Montreal district, 50 hours in the intermediate district, and 55 hours in the less populous districts. Work in excess of these work periods is to be counted as overtime.

Work for less than the above work-period may be counted as short-time and be paid for pro rata of the minimum wages fixed by this Order.

The total of working hours cannot in any case exceed 55 hours per week unless a special permit has been obtained from the Public Buildings and Industrial Establisments Inspection Department.

Maximum of Apprentices: The number of apprentices shall not exceed one-half of the total female working force. Temporary employees, whose term of employment does not exceed one month, shall not be subject to this rule, nor be included in this calculation.

Piece Work: The wages paid to each time-worker and to each pieceworker during the first six months employment in the industry shall conform to this Order. In the case of piece-workers of more than six months experience, it is sufficient if at least 80 per cent receive wages conformable to this Order.

Averaging Piecework Rates: The wage rates may be averaged for any pieceworker, provided that the average is maintained at each payment. Wages received before this Order became effective, or more than three months before the date of the payment concerned, shall not be considered in any such calculation.

Deduction for Absence: No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

Waiting: Any employee required to wait on the premises shall be paid for the time thus spent. Pieceworkers shall be paid at a rate not less than that fixed for the class to which they belong.

Permits: The Board may issue permits for lower wages on behalf of aged or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

Penalties: Any violation of this Order is punishable by fine. (See section 12 of the Act.)

Posting: Each establishment shall keep a copy of this Order posted in a conspicuous place in the shop.

This Order is subject to annual revision by the Board.

This Order shall come into force and be effective on July 1, 1930.

6333—4

Orders No. 9 and 9a, governing female employment in the cloth hats, caps and millinery (except custom millinery).

No wage shall be less than is set forth in the following table:—

—	City and Island of Montreal	Rest of Province
Experienced workers	$12 50	$10 00
Beginners	7 00	6 00
After 6 months	8 00	7 00
After 12 months	9 50	8 00
After 18 months	11 00	9 00

The work period for which these rates are to be paid are 44 hours in the Montreal district, and 50 hours in the remainder of the province. The other provisions of these two orders are identical with those cited above in Order No. 8.

Orders No. 10 and 10a, governing female employment in the women's and children's dresses, silk underwear, kimonas and fine lingerie industries.

No wage shall be less per week than is set forth in the following table.

—	City and Island of Montreal	Rest of Province
Experienced workers	$12 50	$10 00
Beginners	7 00	6 00
After 6 months	8 00	7 00
After 12 months	9 50	8 00
After 18 months	11 00	9 00

The work period for which these rates of wages are to be paid are 48 hours in the Montreal District and 50 hours in the rest of the province. The other provisions containing these orders are the same as in Order No. 8.

Orders No. 11, 11a and 11b, governing female employment in the overalls, mackinaws, men's and boys' shirts, collars, fabric, rayon and cotton underwear and other similar garment industries.

No wage shall be less per week than is set forth in the following table:—

—	City and Island of Montreal	Cities of 15,000 and over	Other municipalities
Experienced workers	$11 00	$9 00	$9 00
Beginners	7 00	6 00	6 00
After 6 months	8 00	6 50	6 50
After 12 months	9 00	7 00	7 00
After 18 months	10 00	8 00	8 00

The work period for which these rates of wages are to be paid are respectively 48, 50 and 55 hours in the three divisions. The other provisions in these three orders are as in Order No. 8.

Orders No. 12 and 12a, governing female employment in the tobacco, cigars and cigarette industries.

No wage shall be less per week than is set forth in the following table:—

—	City and Island of Montreal	Rest of Province
Experienced workers	$12 50	$9 00
Beginners	7 00	6 00
After 6 months	8 00	6 50
After 12 months	9 50	7 00
After 18 months	11 00	8 00

The work period for which these minimum wages shall be paid are respectively 50 and 55 hours in the two divisions. The other provisions are as in Order No. 8.

MINIMUM WAGES FOR WOMEN IN MANITOBA

Revised Regulations Governing Women Workers in Retail Stores

THE Minimum Wage Board of Manitoba has published a new Regulation (No. 12) governing all women workers employed in retail stores, including shops, booths, stalls, and newstands throughout the province. The sections relating to wages are as follows:—

Minimum rates of Wages

(1) No experienced employee of eighteen years of age or over shall be paid wages at a rate less than twelve dollars ($12) per week.

(2) Inexperienced Employees.—No inexperienced employee shall be paid wages at a rate less than $9 per week for the first four months of employment, and $10 per week for the second four months, and $11 per week for the third four months, after which period she shall be considered an experienced employee.

(3) Casual or Part Time Workers.—Employees working as casual or part time workers shall be paid, if experienced, at a rate of not less than thirty cents (30c.) per hour, and if inexperienced, at a rate of not less than twenty-five cents (25c.) per hour.

(4) Method of payment.—Wages shall be paid weekly and after each week's wages have been earned they shall be paid within three days.

(5) Statutory Holidays.—No reduction shall be made from the minimum wages for statutory holidays.

(6) Uniforms.—If special uniform is required it shall be furnished and laundered by the employer without cost to the employee. The total number of inexperienced workers shall not exceed twenty-five per cent (25 per cent) of the total experienced female employees. No girl under fourteen (14) years of age shall be employed.

Board, Lodging, etc.

Where lodging is furnished by the employers, there may be deducted from the wage rate a sum which shall be not more than at a rate of two dollars ($2) per week, and for board at not more than at a rate of four dollars and a half ($4.50) per week, or one dollar and a half ($1.50) per week, if one meal is supplied each working day; or three dollars ($3) per week if two meals are supplied each working day; or twenty-five cents (25c.) for each meal if the number supplied is less than one each working day. For both lodging and board at not more than at a rate of six dollars ($6) per week.

Conditions of Labour

The section governing conditions of labour makes provision for cleanliness of the workrooms, etc., for pure drinking water; for sufficient lighting; for ventilation; for adequate toilet arrangements; for a temperature between 60 and 75 degrees, except when there is a higher temperature outside. All machinery and danger points are to be protected as far as possible by the best safety devices known. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First Aid Kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. Where five or more women are employed a couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided.

Seats shall be provided in accordance with section 23 of "The Shop Act," in the proportion of one seat to every four employees or fraction thereof.

The Board may issue a permit, upon application therefor, to any employers in cases of exceptional or emergent conditions, granting a modification of, or exemption from, these regulations.

Any violation of the regulations is punishable by fine or imprisonment as provided in section 17 of the Minimum Wage Act.

Each employer is required to keep a copy of the regulations posted in a conspicuous place.

The order takes effect on the date of its publication, all previous regulations and orders of the Board relating to this class of employment being repealed.

WORKMEN'S COMPENSATION IN ONTARIO IN 1929

THE report of the Ontario Workmen's Compensation Board for 1929 indicated an increase in the number of accidents over any preceding year, the number of fatalities, however, being practically unchanged.

Number of Industrial Accidents.—In 1929, the number of industrial accidents reported to the Board totalled 87,103, as compared with 79,398 in 1928, and with 71,979 in 1927, an increase of nearly 10 per cent over the preceding year. During the same period the provisional payrolls reported to the Board for the year showed a substantial increase, increasing from $503,392,000 in 1928 to $543,455,000 in 1929. This increase appeared to be fairly general in all the classes, there being only two classes—lumbering and steel construction—which did not show an increase in employment as indicated by increased wage expenditures. The percentage of increase in wage expenditures compares closely with the increased percentage in accidents, so that not only was there an increase in number of accidents, but also an increase in amount of employment as indicated by the wage expenditures. The number of employers also showed an increase from 23,685 in 1928, to 24,078 in 1929.

As to the severity of accidents, as indicated by the duration of disability or the fact of medical aid only being involved, the year's experience indicated that of the accidents in *Schedule 1 (where medical aid is paid by the Board) out of 68,195 accidents paid for during 1929, 33,955 involved medical aid only, or practically one-half of the total number of allowed cases in Schedule 1, and that 31,005 involved temporary disability only, while there were 2,884 cases in which permanent partial disability awards were made, and ten total permanent disability cases. Out of all cases, Schedules 1 and 2 and Crown cases, there were 452 deaths, as compared with 453 for 1928.

While in previous years, August was the month in which the greatest number of accidents occurred, in 1929 the peak was reached in July with 8,538 accidents. This was the highest number of accidents shown in any month since the commencement of the Act.

Benefits.—The total amount of benefits awarded under the Act during the year 1929 was $8,012,157.78, as compared with $7,067,946.93 in 1928. Out of the total benefits so awarded in 1929, $6,732,145.81 were in Schedule 1 industries, $655,671 in Schedule 2 industries, and $624,340.97 in Crown cases. The benefits awarded in Schedule 1 included $1,385,524.62 medical aid, which again shows a very large increase amounting to $219,017.08 over that paid in 1928. This is to some extent explained by the fact that the allowance paid to hospitals during the year was $3 per day instead of $2.50 as in the preceding year. The medical aid represents a little over 20½ per cent of the total amount awarded for benefits in Schedule 1.

The total benefits awarded from the commencement of the Act to the end of 1929 amounted to $78,480,206.93, while the total accidents reported during the same period amounted to 806,410.

Average Rates of Assessment.—Based on the provisional wage expenditure, the average rate of assessment in all classes in Schedule 1 shows a slight increase over 1928, when it was $1.33 per $100 of payroll. The rate in 1929 was $1.35 per $100 of payroll.

Administration Expenses.—The administration expenses for the year amounted to $341,083.58, as compared with $317,247.35 during 1928. This difference is nearly all accounted for by the normal increases in salary and by the cost of the additional help taken on to handle the additional work entailed by

*Schedule 1 comprises industries under the collective liability system, the employer not being individually liable for accidents to his workmen, but being assessed to provide a general fund out of which accidents occurring in the several classes of industries throughout the province are taken care of. In Schedule 2 industries the employer is individually liable for accidents to his workmen. The greater number of accidents are under Schedule 1.

practically 10 per cent increase in number of accidents. The percentage of increase is much less than the increased percentage of accidents being handled. The percentage relation of administration costs to the amount of benefits awarded shows that the total administration expense for 1929 was 4·26 per cent of the benefits awarded as compared with 4·49 per cent for 1928 and 4·66 per cent in 1927. This administration expense was divided among Schedule 1, Schedule 2, and Crown cases, the percentage chargeable to Schedule 1 industries being 4.37 per cent of the benefits awarded, and to those in Schedule 2 and Crown, 3·68 per cent.

In order to insure better acquaintance with and attention to long-standing cases and a better appreciation of permanent disability present, the Board sent its Chief Medical Officer to various industrial centres for the purpose of making examinations of claimants who had long continued and serious disabilities or who were appealing from permanent partial disability awards. This practice resulted in regular visits of the Chief Medical Officer to the cities of Windsor, Ottawa, and London, and claimants in the surrounding smaller places are seen at these centres. The Board considers that this results in much closer touch with the workmen and leads to checking up of treatment being rendered, and also a better appreciation of the extent of permanent disability present, and the results justify continuance of this practice.

Industrial Health Promotion.—The report states that while there were no legislative amendments to the Act during the session of 1929, the Board approved of the Order in Council whereby chrome poisoning was added to the list of compensable diseases. Also, in pursuance of amendments made to The Mining Act in 1928, requiring the examination of all workmen employed underground in the mines in Ontario by a medical officer appointed under the provisions of The Workmen's Compensation Act, the Board appointed three medical examiners, Dr. N. H. Russell for the Porcupine area, Dr. A. E. Morgan for the Sudbury area, and Dr. R. W. McBain for the Kirkland Lake and Cobalt districts. The Act became effective on January 1, 1929, and since that time these three doctors examined about 7,500 miners during the year, 1929, and shortly after the end of the year all miners in these areas had been examined at least once under the provisions of this Act. As their certificates require to be renewed every year, re-examinations are taking place. It is pointed out that this work is unquestionably very effective in preventing employment of workmen who are unsuited for such employment by reason of lung conditions, or prevents continuance of such employment to a point injurious to the health of the miners. The problem of silicosis is being dealt with in such a way as to very much lessen the impairment of the health of the miners by reason of this disease for the future, either by preventing entry into the employment of those whose lungs cannot withstand this complaint or by taking out of it those already so engaged whose health is becoming or has become impaired.

Accident Prevention and First Aid.—An increased amount was spent by the Board during the year in connection with grants to safety associations, the total being $127,638,98, as compared with $115,620.55 during 1928, divided as follows: Lumbermen's Safety Association, $21,233.33: The Ontario Pulp and Paper Makers' Safety Association, $12,200; the Industrial Accident Prevention Associations, $87,205.65; and the Electrical Employers' Association of Ontario, $7,000.

Accident prevention and safety work was carried on with great enthusiasm by the different associations during the year, and more effort was made to attract the interest of the executives of the different employers in such work and to impress upon them the great importance of checking up on their individual plants as to possible improved safeguards in connection with machinery and plant and of encouraging better safety practices and safety thinking in their superintendents, foremen, and workmen.

The employer's attention was specially urged to the study of the cost of accidents in his own individual plant and to methods of reduction of same, just as in any other branch of his production cost. Special clerks were employed by the Board at the expense of some of the accident prevention associations so that the experience of individual members of the associations can be furnished and studied by them.

Reviewing first aid activities the report relates the establishment of rescue stations in the mining districts. In collaboration with the Department of Mines there has already been established a rescue station with all modern equipment at Timmins, and a practical man has been placed in charge of this station who has since taken a special course in mine rescue work in the United States and who will have charge of training crews in the different mines for the purpose of handling mine rescue equipment in cases of explosion or fires in connection with the operating mines. It is expected that during the year 1930 two more stations will be equipped, one at Sudbury and one for the Kirkland Lake and Cobalt district.

The cost of these is being borne by the mining class.

The report again draws the attention of the employers to the importance of prompt first aid treatment, and to the provisions of the Act requiring every employer to have suitable first aid kits provided in his plant.

Rehabilitation.—In the matter of rehabilitation, the Board again emphasizes that while it has continued to provide courses of instruction in deserving cases, yet the number of such cases in which instruction by education can be given is limited "practically to the young and intelligent workman who is capable of receiving benefit from such courses." For the great majority of seriously injured workmen there is no other method of rehabilitation except by getting them back to some form of work which they are able to perform in their maimed condition. The Board, having no means to secure re-employment, has to depend upon the employers to carry out the work of rehabilitation. Accordingly employers are urged to co-operate with the Board, "and so recognize the responsibility of industry for its maimed and injured workmen."

Merit Rating.—Merit rating is the system whereby individual distinction between employers even in the same industry in regard to their assessment rates is made according to their accident experience. This system was outlined in the report for 1927 (Labour Gazette, June, 1928, page 608). The report announces that the amount awarded in merit rating in 1929 wes $107,860.67 as compared with $85,597.27 in 1928.

Funds.—The report outlines the policy of the Board in making provision for meeting future payments in connection with all pension awards. For the purpose of meeting the pensions awarded and deferred payments, the Board has now invested in Schedule 1 the sum of $19,790,302.37, and in Schedule 2 the sum of $3,534,986.67—a total of $23,325,289.04.

No levy was made during the year for the Disaster Reserve Fund, which was created by the deduction of one per cent from all assessments paid by employers in Schedule 1 so that it might be applied to the relief of any class which might otherwise be too heavily burdened in any year by reason of some catastrophe or heavy disaster. The standing of the Disaster Reserve now shows a credit balance of $280,284.14.

The accompanying table indicates the total income and expediture for the various industrial classes in Schedule 1 for 1929.

INCOME AND EXPENDITURE FOR SCHEDULE DURING 1929.

Class of Industry	Total income (actual and estimated)	Total Expenditure (actual and estimated)
	$ c.	$ c.
Lumbering	776,279 17	723,237 05
Pulp and paper mills	261,565 77	283,140 70
Furniture manufacturing, etc.	124,110 30	141,270 78
Planing mills, etc	221,632 51	227,502 34
Mining and explosives	863,093 64	1,032,077 63
Brick manufacturing, quarrying and glass works	284,272 54	355,370 95
Rolling mills, etc	157,496 49	159,471 44
Foundries, etc	171,001 04	181,307 92
Fabrication structural steel, etc	501,692 15	546,474 15
Metal articles, jewellery manufacturing, etc	337,530 04	386,940 93
Agricultural implements, etc	463,671 87	474,864 64
Gas, petroleum, paint, drugs, soap, etc	184,577 06	189,560 20
Milling	51,042 68	123,075 16
Abattoirs, etc	65,054 99	59,442 78
Bakeries, canning, liquors and tobacco	258,059 49	315,270 61
Tanneries, leather and rubber goods	200,610 44	192,125 32
Textiles	112,869 65	131,301 18
Clothing, power laundries, etc.	78,251 61	94,194 64
Printing and stationery	83,577 22	104,461 71
Teaming, cartage, coal and wood yards, etc	293,485 67	342,310 37
Road construction, etc	394,872 02	399,513 20
Electric power, etc	116,402 25	95,898 89
Steel construction, railway and canal construction, dredging, fishing, etc	478,885 34	464,788 30
Building	983,675 85	1,089,567 25
Total	7,463,709 79	8,113,168 17

Completed Statistics for 1928

In a special chapter of the report are detailed the operations for 1928, containing information which was not available when the report for that year was made.

The final figures for the 13-year period from 1915 to 1928, inclusive, indicate a total of 593,505 accidents. Of this number, 4,737 were fatal; 32,534 were cases of permanent disability; 335,506 were cases of temporary disability; and 220,728 entailed medical aid only.

The report makes a comparison of accident frequencies by correlating the number of accidents with the total number of full-year workers, data for this being available, however, only in Schedule 1. Eliminating accidents in which medical aid only was paid, the number of accidents for each 100 full-year workers for the different years are as follows:—

Year	Temporary Disability	Permanent Disability	Death	Totals
1915	3·63	0·58	0·12	4·32
1916	4·99	0·79	0·10	5·88
1917	5·78	0·72	0·07	6·57
1918	5·81	0·66	0·07	6·54
1919	5·81	0·68	0·07	6·56
1920	6·23	0·67	0·07	6·97
1921	6·25	0·60	0·05	6·90
1922	5·82	0·52	0·06	6·40
1923	6·02	0·51	0·05	6·58
1924	6·08	0·54	0·06	6·68
1925	5·94	0·51	0·05	6·50
1926	5·84	0·54	0·05	6·43
1927	5·94	0·53	0·05	6·52
1928	5·85	0·58	0·07	6·50

On the same basis of calculation, the frequency of medical aid only cases has been: 1918, 3.66; 1919, 3.70; 1920, 4.26; 1921, 4.24; 1922, 4.67; 1923, 4.96; 1924, 5.84; 1925, 6.09; 1926, 6.37; 1927, 6.73; and 1928, 7.09.

The average weekly wage of workmen receiving compensation in 1928 was $23.65 as compared with $23.11 for 1927 and $22.64 for 1926; while the average age of such workmen was 34.56 years.

The total time loss in temporary disability cases was 639,448 days or an average of 21.01 days as compared with an average of 21.05 days in 1927 and 20.74 days in 1926.

The total cost of all accidents in Schedule 1 for 1928 was $6,083,772.14, of which $4,835,091.46 was for compensation (including payments for rehabilitation) and $1,248,680.68 was for medical aid.

Of the $4,835,091.46 compensation cost, $1,793,600.21 was for temporary disability cases, $1,930,598.25 was for permanent disability cases, and $1,110,893 was for death cases.

The average cost of temporary disability cases was $97.18 of which $68.61 was for compensation and $28.57 was for medical aid, the average in 1927 being $86.13, and in 1926, $77.41.

The average cost of permanent disability cases was $871.38, of which $216.61 was for temporary disability, $533.09 for permanent disability, and $121.68 for medical aid.

The average cost of death cases where there were dependants was $4,940.18, and the average cost for all death cases was $3,546.23, of which $20.43 was for temporary disability, $122.87 for burial expenses, $41.84 for medical aid, and $3,361.09 for death benefits.

The average cost of all cases in which compensation was paid was $203.46, of which $166.50 was for compensation and $36.96 for medical aid, as compared with $183.14 for 1927, and $180.18 for 1926.

The average cost of medical aid in medical aid only cases was $5.54, as compared with $5.49 in 1927, and $5.42 in 1926.

In 47 per cent of the cases the disability terminated in from one to two weeks. In 25 cases the disability lasted more than a year.

During 1928 there were 11,221 cuts, lacerations, and punctures; 7,626 bruises, contusions, and abrasions; 3,382 fractures; 2,818 sprains, strains, twistings, and wrenchings; 2,500 crushes; 1,308 scalds and burns; 925 injuries to eyes; 184 dislocations and 140 herniae, among the temporary disabilities.

Among the 2,926 permanent disabilities were 14 permanent total disability cases, and 310 cases exceeded 10 per cent of working capacity.

There were 108 industrial disease cases, of which 37 involved medical aid only, 56 were temporary disability cases, 6 were permanent disability cases, and 9 were death cases. Included in these totals are 30 cases of lead poisoning, 18 cases of silicosis, 56 cases of caisson disease, 3 cases of benzol poisoning, and 1 case of anthrax.

Machinery was responsible for 13,548 out of a total of 65,468, or 20.70 per cent of all cases as compared with 19.40 per cent in 1927, and 19.60 per cent in 1926.

WORKMEN'S COMPENSATION IN MANITOBA IN 1929

THE report of the Workmen's Compensation Board of Manitoba for the year 1929 indicates a marked increase from the preceding year in the number of fatal accidents, which totalled 85 as compared with 67 in the previous year, or approximately 27 per cent.

The greatest increase in fatal accidents occurred in Class G (the general body of employers), who reported 61 fatal accidents for 1929 as compared with 35 during 1928, an increase of 74 per cent. In 1927, the number of fatalities in this group was 26; in 1926 and 1925 it was 21; and in 1924, it was 7.

Commenting on this increase over a period of six years, the report says:—"The Board can only reiterate what was stressed in its last report to the Legislature that the number of fatal accidents occurring in Class G is apparently not due to increased employment, but rather seems to indicate the lack of proper care, foresight and planning in carrying out duties which are attended with danger. The Board is not laying the blame for these accidents either at the door of the employers or the employees, but it would seem that with co-operative effort the number of these un-

fortunate fatalities might be materially reduced.

"The steady increase of serious industrial accidents in this province is altogether out of proportion to the increase in payroll exposure. In Class G during the past five years payroll has nearly doubled, it is true, but fatal accidents in this group increased from 7 in 1924 to 61 in 1929. Moreover, the increase has been steady and regular. A vigorous and well-directed safety campaign would do much. The Winnipeg Board of Trade has initiated such a movement, and it is well worthy of support from all concerned. The Bureau of Labour is doing what work their appropriation will permit. Needless to say, to be effective, a safety campaign must reach and appeal to the foreman and the man on the job."

During 1929 the volume of work handled by the Board was reported as being about the same as in the previous year. The total number of accidents in 1929 was 13,340, as compared with 13,282 reported during 1928, an increase of 58. There was a 23·4 per cent decrease in the number of accidents reported by the steam railways group, and a 10 per cent increase in the general employers' system. The comparative figures for the various classes are as follows:—

Class	Group	1929	1928
"A" "B" and "C"	Steam Railways	2,890	3,772
"D"	Province of Manitoba	156	131
"E"	City of Winnipeg	318	284
"G"	General Body of Employe·s.	8,893	8,085
"H"	Winnipeg Electric Company.	142	127
"D.A."	Dominion Government	941	883
		13,340	13,282

The final statistics for 1928 indicate that in that year 13,416 accidents actually occurred. Of these accidents 71·5 per cent entailed the payment of compensation either for medical aid only or for compensation for time loss and medical aid, while in 28·5 per cent of cases no expense was entailed. On December 31, 1929, the Board had on its books 549 dependents of workmen killed in industry during the period March 1, 1917, to December 31, 1929, a net addition of 59 dependents during the year.

The actual ascertained payroll of the employers in Class G for the year 1928 was $45,350,859. The assessment paid by this class of employers on the 1928 payroll totalled $836,008.59.

During 1929 the Board assessed 5,002 employers in Class G, as compared with 4,788 assessed during 1928.

The payroll for the year 1929 as reported by employers in Class G amounted to approximately $48,000,000 but could not be determined until audit has been completed.

The total payrolls for all classes for 1928 (actual) and 1929 (estimated) are as follows:—

Class	Actual payroll (1928)	Estimated payroll (1929)
A—Canadian Pacific Railway Co.	$11,438,670 22	$10,000,000 00
B—Grand Trunk Pacific Railway	1,000,000 00	1,000,000 00
C—Canadian National Railways	9,320,321 03	9,000,000 00
D—Province of Manitoba	3,428,455 09	3,400,000 00
E—City of Winnipeg	2,855,681 73	3,000,000 00
G—General Body of Employers	45,350,859 00	48,000,000 00
H—Winnipeg Electric Company	2,696,770 80	2,600,000 00
	$76,090,757 87	$77,000,000 00

During 1929 employers to the number of 51 had their operations brought under Part One of the Act by application approved by the Board. As of December 31, 1929, there were 285 employers whose operations had been brought under the Act in this manner.

Thirteen employers made application to the Board during 1929 and were permitted self-coverage for themselves and their dependents. At December 31, 1929, there were 93 employers carrying this protection.

Audit of employers' payrolls during 1929 produced additional assessment in the amount of $10,041.85, while new employers to the number of 49 paid assessment amounting to $745.18. Refunds amounting to $219.06 were made to employers as a result of audit.

During 1929 the actual cash disbursed by the Board amounted to $1,068,378.86, as compared with $941,029.78 disbursed during 1928, an increase of $127,349.08.

The number of cheques issued by the Board during the year totalled 37,379, as compared with 35,794 issued during 1928, an increase of 1,585.

The value of Board Orders during 1929 for the payment of compensation, which includes orders respecting Dominion Government employees, and covers amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases, was $1,208,451.28, as compared to $968,209.89, an increase of $240,241.39.

WORKMEN'S COMPENSATION FOR DOMINION GOVERNMENT EMPLOYEES

THE report of the Department of Railways and Canals for the year ended March 31, 1929, in addition to detailing the Departments activities in administering the various Government railway and canal systems, contains a review of operations under the Government Employees' Compensation Act. This Act is administered by the department for the entire Government service, the Canadian Government Railways having the largest number of the employees coming under its scope. Payments of compensation to injured workmen, however, are made by the Workmen's Compensation authority in the respective provinces where the accidents have occurred. The provisions of the Government Employees Compensation Act, which was enacted in 1918, are as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

A total of $2,767,049.05 has been expended in compensation, pensions, and administration since the adoption of the Act to March 31, 1929. During the fiscal year ended March, 1929, the total amount of disbursements for all departments was $381,081.55, while $21,147.71 was expended on administration. The number of claims dealt with in the same period was 3,439, of which total, 2,282 involved both compensation and medical aid; 833 were for medical aid only; and 324 were for pensions.

Of the total of 3,439 claims, 2,447 were from the employees of the Canadian Government Railways and entailed disbursements amounting to $240,947.37. The Hudson Bay Railway had 245 claims with disbursements totalling $17,680.27. There were 206 claims resulting from canal operations, involving payments $29,172.66.

Claims from the Department of Public Works totalled 152, the disbursements amounting to $28,658.69.

The total number of claims from several other departments, together with the corresponding expenditure, was as follows:—

Interior—91 claims involving $11,334.33;

Marine and Fisheries—83 claims involving $24,351.24;

Mines—57 claims involving $6,810.03;

Post Office—45 claims involving $1,385.75;

Pensions and National Health—23 claims involving $4,942.01.

The accompanying table indicates the payments under the Act from 1918 to March 31, 1929, by provinces:—

Provincial Board	Dominion Expenditure including amounts advanced	Disbursements	
		Compensation, pensions, etc.	Proportion administrative expenses
	$	$	$
Nova Scotia	326,678	275,304	40,197
New Brunswick	681,409	600,563	66,369
Ontario	659,461	632,199	19,900
Manitoba	457,438	394,095	53,842
Alberta	72,375	62,523	7,693
British Columbia	121,817	115,620	5,372
Province of Prince Edward Island	6,747	6,747	
Province of Quebec and miscellaneous	424,976	424,684	292
Province of Ontario (medical aid)	1,240	1,240	
Province of Saskatchewan	1,115	1,115	
Interest deposited to credit of Casual Revenue	13,787		
Totals to March 31, 1929	2,767,049	2,514,093	193,669

Pensions.—The report reviews the pension scheme in operation on the Canadian National Railways system. The various enactments in connection with this plan have been outlined from time to time in the LABOUR GAZETTE, the most recent references being in the issues of

March, 1929, page 264; April, 1929, page 396; and June, 1929, page 602. The formation of the Canadian National system led to the necessity to give consideration to a general pension scheme, and a couple of years ago the Minister of Railways authorized, on behalf of the Government, the working out of the plan which was presented to Parliament in 1929 in an Act to amend the Grand Trunk Act 1906-7, with respect to pensions, and an Act to further amend the Intercolonial and Prince Edward Island Railway Employees Provident Fund Act. These two bills, on adoption by Parliament, became respectively chapters 4 and 5 of the 1929 session.

Pensions provided under the general scheme will be practically the same as those in force on the Canadian Pacific Railway and the large railways in the United States, viz., one per cent of the average pay over a ten-year period multiplied by the years of service. At its maximum application this scheme of superannuation will require the provision by the railway of about $1,000,000 annually.

At the date of this pension legislation there were in the service of the railway, permanent and otherwise, 109,423 employees, of which number 85,977 were employed on Canadian lines, 11,514 on United States lines, and 11,932 in the hotels, express, telegraphs, and steamship services. Of the foregoing, 10,861 are members of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund, and about 15,000 may be regarded as non-permanent and, therefore, non-pensionable, so that in the neighbourhood of 83,000 employees may be said to be affected by the new and general scheme of superannuation.

THE MINING INDUSTRY OF NOVA SCOTIA IN 1929

THE annual report of the Department of Public Works and Mines of Nova Scotia, recently published, gives details of mining activities in the province during the year ended September 30, 1929. In an introductory preface, the Minister of Public Works and Mines states that "the coal mining industry has had a year in which the output has scarcely been maintained and the largest producer reports an unprofitable year's business. It is clear that remedial measures towards this industry are necessary and that when taken they will require a lapse of some time before showing beneficial results."

The principal facts in connection with the mining industry during the past year are summarized in the following paragraphs from the report:—

The average number of men employed at the coal mines show the total to be 13,060 as compared with 13,431 of the previous year.

The total number of man days worked was 3,261,764 as compared with 3,093,584 in the fiscal year of 1928, which is an increase of 168,180 days.

The coal output for the year was 6,339,492 tons of 2,240 lbs., as compared with the previous year's output of 6,020,203 tons, an increase of 319,289 tons.

The coal sales for the year were 5,766,212 tons of 2,240 lbs., as compared with the previous year's sales of 5,518,535 tons, an increase of 247,677 tons.

The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,925,519 tons of 2,240 lbs., as compared with 1,794,137 tons in the previous year, an increase of 131,382 tons.

Shipments to the United States were 30,184 tons during the fiscal year, as compared with 39,474 tons for the previous year.

The shipments to the St. Lawrence markets in the fiscal year were 2,527,683 tons of 2,240 lbs., as compared with 2,444,709 tons for the previous year, an increase of 82,974 tons.

The quantity of coal supplied the Dominion Iron and Steel Company was 927,752 tons as against 874,490 tons in 1928, an increase of 53,262 tons.

The total output of coal used by the coke ovens in the province last year was 591,045 tons—580,733 tons by the Dominion Iron and Steel Company and 10,312 tons by the N. S. Light and Power Company while this year a total of 751,657 tons were used—742,213 tons by the Dominion Iron and Steel Company and 9,444 tons by the N. S. Light and Power Company.

The total quantity of coke manufactured in the province this year was 459,305 tons—452,406 tons by the Dominion Iron and Steel Company and 6,899 tons by the N. S. Light and Power Company. Last year there was a total of 395,843 tons produced—388,426 tons by the Dominion Iron and Steel Company and 7,417 tons by the N. S. Light and Power Company.

The quantity of tar manufactured from coal during the fiscal year was 7,012,027 imperial gallons, as against 6,419,681 gallons manufactured during the previous year.

The benzol gas, from coal manufactured for motor fuel, etc., during the year was 1,283,978

imperial gallons, as against 1,074,928 in the previous year, showing an increase of 209,050 gallons.

Gold production during the year amounted to 1,568 oz., an increase of 128 oz., as compared with last year. While the gold recovery in the past year did not assume big proportions, there were signs of renewed interest in the gold fields, and progress was made in testing new developments.

There were 2,107,134 silicate bricks manufactured during the past year. This is an increase of 35,833 as compared with the previous year.

The mining and shipment of crude and calcined gypsum reached 1,021,081 tons for the fiscal year. This is an increase of 48,870 tons over the previous year.

The production of salt for the fiscal year was 30,625 tons, as against 19,674 tons for the previous year.

The annual review also contains the reports of the various officials, and in this respect, Mr. Norman Mackenzie, Inspector of Mines, expresses the Department's appreciation of the important assistance rendered to the province by the Federal Department of Mines through the Canadian Geological Survey.

The operations at each mine during the year are detailed, and a directory of mines in the province is included in the report, which is a well illustrated volume, and constitutes a complete guide to the mining industry of Nova Scotia.

ONTARIO APPRENTICESHIP ACT

Changes in Regulations after Two Years' Experience

CERTAIN important changes in the general regulations governing apprenticeship in the building trades have been announced by the Ontario Apprenticeship Council and are embodied in an open letter recently sent out to employers in those trades by Mr. A. W. Crawford, Inspector of Apprenticeship. The provisions of the Ontario Apprenticeship Act were outlined in the LABOUR GAZETTE, March, 1928, page 269, and the tentative regulations (since confirmed) were printed in the issue of March, 1929, page 287. Mr. Crawford's letter reads as follows:—

Results After Two Years

"The Ontario Apprenticeship Act has been in force two years, and its operation in the larger centres throughout the province is beginning to show results. Approximately 1,300 apprentices in the nine designated building trades have been registered to date. Over 70 young men have successfully completed their apprenticeship periods since being registered, and about 35 contracts have been cancelled for various reasons. It is expected that at least 2,500 apprentices will be registered under the Act within the next three or four years. No drastic changes have yet been made in connection with the training of apprentices, but the facts that boys are now indentured and the training programs are subject to government supervision have resulted in more continuous employment for apprentices and closer co-operation between schools and industry in connection with the practical and theoretical training.

"The regulations adopted by the Provincial Apprenticeship Committee have been taken from existing trade agreements and are designed to meet conditions throughout the whole province. It is realized that local conditions may require certain changes and adjustments, which will be worked out through local trade apprenticeship committees. Before such changes can be made, however, it is necessary to get the scheme in operation throughout the province and to meet difficulties as they arise. The following important changes in general regulations are designed to facilitate the operation of the Act in the smaller municipalities.

Minimum Wage Scale

"At the request of employers in the plumbing, steamfitting, sheet metal, and electrical trades in various parts of the province, the Provincial Apprenticeship Committee has decided to reduce the minimum wage scale from 20, 25, 35, and 50 per cent of the journeyman rate for each of the four years respectively, to a rate under which an apprentice will earn not less than the following amounts for a 44 hour week:—

First year	$ 6.00
Second year	8.00
Third year	12.00
Fourth year	16.00

"Wages in the Contract of Apprenticeship should be set forth in cents per hour, and it is suggested that the following percentage schedule be adopted as a minimum in determining the rates in any designated trade:—

First year.. .. ..15 per cent of the prevalent journeyman rate.
Second year.. .. ..20 per cent of the prevalent journeyman rate.
Third year.. .. ..35 per cent of the prevalent journeyman rate.
Fourth year.. .. ..55 per cent of the prevalent journeyman rate.

"In no case, however, must the rates set forth in any contract be such that the apprentice will earn less than $6, $8, $12, and $16 per week of 44 hours. Local rates in each trade are set by trade apprenticeship committees.

Continuous Employment

"In some trades, it has been found impossible for employers to give 52 weeks employment to apprentices, and it is deemed unfair to employers to insist upon payment of wages to apprentices during enforced periods of idleness when work is not available. The Committee feels, however, that employers who cannot provide fairly continuous employment for boys should not attempt to train apprentices, and that in every case the employer should be obliged to keep the apprentice on the payroll so long as there is work of any kind to be done. The apprentice should be obliged to do any work available during slack periods, but these periods should be limited. In order to meet this situation, the following change in regulations has been approved:—

"Continuous employment shall be defined as employment for the apprentice by the employer so long as the latter has work to do—but in no case less than 44 weeks per year. In the case of first and second year apprentices, the period of compulsory school training shall count as employment."

School Attendance

"One of the most important features of apprenticeship, and the most difficult to organize, is that in connection with the schooling of apprentices. The Provincial Apprenticeship Committee is convinced that every apprentice in a designated trade should receive at least 320 class hours of instruction, during each of the first and second years, and it is felt that the most effective way of providing such instruction is to organize special day apprenticeship classes during the winter months. The classes in bricklaying and carpentry, which have been conducted during the past three winters, have been approved by employers and employees and, almost without exception, the apprentices attending such classes have assured us that they have learned more while attending these classes than they could possibly have learned on the job during at least twice the time spent in school. The day classes in plastering, sheet metal work, electric installation, and plumbing, organized in Hamilton during the past winter, were also highly appreciated by the apprentices, although the beneficial results have not yet become fully apparent.

Apprenticeship Districts

"In order to make it possible for all apprentices to attend such classes, arrangements are being made for dividing the province into five or more districts, and establishing central apprenticeship classes in each district. It is expected that classes will be organized in Windsor, London, Hamilton, Toronto, Ottawa, and probably one centre in Northern Ontario. All first and second year apprentices in each district will be sent to the central school established for that district, and shall attend day classes during a period of eight weeks in the winter months. The time and place of such classes will be arranged by the Department of Education, in co-operation with local trade committees.

Financial Arrangements

"The financial arrangements for such a scheme are as follows:—

"Apprentices shall receive pay from employers during the time spent in classes, or, apprentices shall receive from the assessment fund a living allowance of, approximately, $8 per week during the time spent in classes. If wages are paid by the employer, he shall be reimbursed, from the assessment fund, $80 for each apprentice sent to school. If a living allowance is paid to the apprentices, the boys shall be struck off the payroll during the time spent in classes. This matter has not yet been decided.

"The railway fares and tuition fees of apprentices attending classes from outside centres, in which vocational schools have been established, shall be paid by the school board in the municipality from which the boy is sent. Apprentices sent to classes from centres in which no vocational schools have been established, shall have their railway fares and tuition fees paid from the assessment fund, but the Provincial Government shall reimburse the fund to the extent of half the cost of such railway fares and tuition fees.

"All employers in designated trades shall be assessed on their payrolls for the purpose of maintaining apprentices in such day classes. For the first year, a common assessment rate will be levied on all trades, but an accurate account will be kept of the

monies collected from each trade and paid for apprentices in each trade, and it is hoped that, within a year or two, we will be in a position to assess each trade separately for its own apprentices, or group certain trades, such as—carpentry and bricklaying, also plumbing, steamfitting, and sheet metal work.

"The money required for next winter is estimated at, approximately $40,000, but it is expected that this amount will be doubled during the next three or four years. A definite rate of assessment has not been fixed, but, when the scheme is in full operation, will not be more than one half of one per cent of the amount of the payrolls.

"It is planned to collect payrolls from employers early this season and to issue assessment notices during the summer months, so that money may be collected for the operation of classes next winter.

"The Provincial Committee fully realizes that there are many difficulties to be overcome before any scheme of apprenticeship can be established which will meet the needs of all apprentices in all parts of the province, but it is expected that employers and employees will co-operate with the Committee in its efforts to provide adequate training for apprentices in designated trades, and I wish to assure you that we welcome constructive criticism at all times and shall do our best to develop apprenticeship in each trade according to the desires of employers and employees, as expressed through local and provincial organizations."

ANNUAL REPORT OF CANADIAN NATIONAL RAILWAYS FOR 1929

THE annual report for the Canadian National Railways system for the calendar year 1929 states that there was a decrease in gross revenue of $16,752,948 (6 per cent), almost entirely due to the reduced crop in the Prairie Provinces and to marketing conditions, as a result of which a large proportion of the grain is still held in this country unsold. The decrease in revenue from grain shipments alone amounted to $15,509,311; and the non-operation of harvester excursions decreased passenger revenue by $1,250,000. Anther disturbing feature was the depreciation of values on the stock market and the resulting lethargy in business during the latter part of the year. These conditions, coupled with the large amount of grain carried over from 1928, produced an unusual situation, the natural effect being substantial reductions in gross and net earnings. The consensus of opinion is that such effect should be temporary and that the future march of development in Canada should continue.

Notwithstanding heavy expenditure in maintenance of way, structures and equipment during the first half of the year, and wage increases which became effective in May and June, operating expenses were reduced by $3,431,451 (1.6 per cent).

The reduction of $15,786,052 (7.5 per cent) in freight revenue is principally due to the decrease in grain shipments. The total estimated Canadian grain crop for 1929 was 501,206,000 bushels—56 per cent less than in 1928.

The total decrease in all commodities handled was 4,257,000 tons; the decrease in System grain shipments being 4,429,476 tons, of which 3,457,794 tons represented a decrease in Western Region grain shipments. In 1929, 84,255 (46 per cent) less cars of grain were shipped over our lines by various routes than in 1928.

The continuance of test coal shipments from Maritime Provinces resulted in all rail movement of 92,823 tons to Quebec points, as compared with 5,575 tons in 1928; also movement from Montreal of vessel-shipped coal from mines in the Maritime Provinces of 193,989 tons as compared with 86,025 in 1928. Special rate Alberta coal shipments to Ontario points aggregated 37,645 tons as compared with 26,536 in 1928.

Passenger revenues decreased $2,174,000 (6.4 per cent) and the number of passengers carried decreased 3.8 per cent. The reduction in number of immigrants admitted from non-preferred countries caused a loss of revenue of approximately $285,000.

Harmonious relations between the management and employees were maintained during the year. The principal wage adjustments made were as follows:—

Effective May 1, shop craft employees on both Canadian and U.S. lines.

Effective June 1, maintenance-of-way employees on Canadian lines and the Duluth, Winnipeg and Pacific Railway.

Effective August 1, clerks, freight handlers, station and baggage room employees, stores and shop labourers, on Canadian lines.

Various working rules affecting conductors and trainmen were consolidated.

Revised rules affecting locomotive engineers were adopted with respect to mileage regulations, promotion and representation.

A general pension scheme approved by Act of Parliament, came into effect on August 1 (Labour Gazette, June, 1929, page 602; January, 1930, page 26). It applies to all officers and employees who are not already covered by and do not remain under previously established superannuation of provident funds on a contribution basis. Fourteen employees with fifty or more years' service were pensioned during the year.

The following employees receive honourable mention for life-saving acts and efforts during the year: Mesrs. E. J. Bambridge, G. K. Best, Sydney Blatchford, Wm. Fraser Cooke, Alex. Gordon Forbes, W. S. Laycock, John Marshall, William Arthur Meens, William Mosher, Alvin Sharlow, and Miss Beatrice Foote.

Towards the end of 1927 there was appointed a chief medical officer with jurisdiction over the various regional medical officers, the purpose being to standardize, so far as might be considered wise, the work of the medical departments in the different regions; also to organize and develop various arrangements considered essential for the joint protection and benefit of the employees and the Company. The results achieved are stated to have been particularly satisfactory. The report points out, however, that much further study and investigation will be necessary, to determine how far the functions of a railway medical department may be carried with advantage. Consequently what has already been accomplished must be regarded as merely the commencement of a development which it is believed will become much more beneficial.

SAFETY WORK ON THE CANADIAN NATIONAL RAILWAYS

Address by Mr. W. D. Robb, Vice-President, C.N.R., at Safety Convention of Industrial Accident Prevention Associations, Inc., at Toronto, April 25, 1930

As President of the Canadian National Railways Council of the St. John Ambulance Association, I desire to express my appreciation of the privilege and honour of addressing this important gathering of the Industrial Accident Prevention Associations at their Safety Convention.

It must be very gratifying and encouraging to your Associations, and I am sure it is a great pleasure to me, to find so many people taking an interest in Safety work. The large gathering here to-day is the strongest possible evidence of the interest taken, not only by those directly concerned, but by the public as a whole.

The Safety movement is not unfamiliar to me, for shortly after the introduction of First Aid on our railroad, I realized that, while it was necessary to give First Aid instruction for the relief of the employees when injured, to obtain the fullest measure of success one of the great features of the work should be to take means and measures to lessen the number of accidents. Therefore, shortly after the First Aid classes were formed on the old Grand Trunk System, we introduced the Safety First branch and coupled and associated it with the First Aid. The work of the head of the Department and his Assistants was to introduce Safety First throughout the System to safeguard in every way possible the lives and limbs of our employees. These two Departments of the Canadian National, First Aid and Safety First, have worked hand in hand, with the result that through their efforts the number of accidents has been considerably reduced. Our slogan therefore has been that "Safety First is First Aid to the uninjured and First Aid is Safety First to the injured."

When the amalgamation of the railroads making up the Canadian National System took place, as I had had considerable experience with Safety First and First Aid, both these Departments were placed under my jurisdiction; but since a Medical Clinic has been established on the Canadian National, with a Chief Medical Officer and Assistants, they have been placed under the jurisdiction of the Medical Department, of which Dr. John McCombe is the head. These two Departments rightly belong to the Medical Department.

In view of the fact that First Aid is one of our most ancient welfare features for the benefit and relief of suffering of the human race, it has always been a mystery to me why greater progress had not been made in this work throughout the civilized world up to some few years ago, for systematic hospital attention to the suffering and injured was established many years ago.

(Mr. Robb next outlined the beginning of the Order of the Hospital of Saint John of

Jerusalem in the eleventh century, and proceeded as follows).

When I contemplate and realize the progress that has been made in First Aid work on the railroads, and in fact throughout the whole world, I naturally make comparison with the lack of First Aid assistance and knowledge when I commenced my career as a railroad apprentice. I very much doubt if you can picture the state of affairs which attended an accident to a fellow workman in those days. The whole shop was disorganized; every man abandoned his job to gather around the unfortunate sufferer, looking on in mute sympathy, anxious to do everything possible to assist his stricken colleague but, through ignorance of First Aid, as helpless as a baby.

Today, when an accident occurs, the work of the shop is unruffled. A recruit of the Cross of St. John springs up as if from nowhere, and without any fuss whatever, and by the scientific application of a few principles and bandages, makes the patient comfortable until skilled medical aid becomes available.

At our main shops we are able to go a pronounced step further. Should the accident be serious, the patient receives attention at our own clinic in charge of a qualified nurse with a doctor in attendance. If the patient's removal to a hospital is necessary, he is borne away in an excellently equipped ambulance maintained by the Railway.

What I wish to emphasize, however, is that it is the unostentatious character of the work, the celerity with which it is accomplished, its thoroughness and striking contribution to the preservation of life and limb which are so impressive; additionally so because it is all done by our own employees, one of the most striking illustrations of good fellowship of which I have any knowledge.

It must not be imagined, however, that this contemporary and excellent state of affairs has been achieved without prodigious spade work and up-hill labour. The great difficulty was to persuade the employees that mastery of the principles of First Aid would be to their own good, but persistence brought its reward at last. Suddenly the humanitarian message of the St. John Ambulance Association became appreciated throughout Canada, and advantage was taken of this revival, but it was not until 1913 that Dr. Hutchison, Dr. Carmichael and myself were able to launch a St. John Ambulance Association centre upon the Grand Trunk Railway, and when we had it going we had to keep our shoulders to the wheel to overcome the forces of prejudice, apathy, even hostility, which I may tell you were somewhat formidable. However, by persuasive tactics and gentle diplomacy, we broke down all opposition, and, in its place, created an atmosphere of perfect harmony and genuine whole-hearted co-operation.

In 1923 there came the great amalgamation of the Railways to form the Canadian National Railway as we know it to-day, and at our First Aid annual general meeting, the new Canadian National Railways Council of the St. John Ambulance Association was formed by the co-ordination of the First Aid branches of the various roads.

At the time of the amalgamation, the First Aid movement upon the Grand Trunk Railway was in a highly prosperous and flourishing condition; and Dr. Hutchison, Dr. Carmichael and myself saw our up-hill work rewarded when our President, Sir Henry Thornton, impressed and satisfied by what we had achieved, instructed us to continue our humanitarian work. Our President, I may say, is an ardent admirer of the great Association formed by Sir John Furley, and when he appreciated what we had accomplished in what we might call the home territory, he decided that the movement, instead of being confined to the older portion of the road, should spread over the whole 23,000 miles of our system from coast to coast; so that to-day the First Aid work on the Canadian National has grown to such an extent that, out of 100,000 or more employees on the system, at the present time we have several thousand who have had instruction in First Aid work, and we have practically reached the objective set by the President when he instructed that First Aid should be spread throughout the whole system so that it would hardly be possible for an accident to happen to an employee, passenger or other person on the whole 23,000 miles of our system from Atlantic to Pacific without there being some employee available with knowledge of First Aid to render the necessary help and assistance.

Our women employees throughout the system receive First Aid instruction as well as the men, and in addition they are taught Home Nursing.

Inasmuch as the taking of First Aid instruction is entirely voluntary on the part of the employees, in order to foster an interest in this important work, various officers of the Company have from time to time donated prizes for annual competition amongst the employees. The number of these prizes has been steadily growing, until now there are no less than twenty-three such trophies. One of these, the Thornton Cup, represents the system championship for men's teams, and my own Cup represents the system championship for womens' teams. The other trophies

are for departmental, regional, district and local championships.

In additional to the competitions amongst our own employees, our First Aid teams take part in St. John Ambulance competitions which are open to others, such as those for the Montizambert Cup, representing the First Aid championship of Canada for men, the Wallace Nesbitt Rosewater Dish, representing the railway championship of Canada for men, the Lady Drummond Cup for the women's home nursing championship of Canada, the Sir George Burn Cup for the women's First Aid championship of Canada, the Sherwood Police Shield and the various Provincial Trophies.

I may say that the Montizambert Trophy, representing the men's championship of Canada, has been won by Canadian National Employees five times in the ten years that has been competed for, and the Lady Drummon Trophy, which until recently represented the women's championship of Canada for both first aid and home nursing, has been won by our employees four times in the eight years since it was donated.

The competition amongst our own employees, as well, as the open competitions, are conducted by Colonel Hodgetts, the Director General of the St. John Ambulance Association, who goes from one end of our system to the other visiting the various terminals to conduct the competitions. As an indication of the extent of our First Aid activities, I may say that it takes Colonel Hodgetts about four and a half months to make the rounds.

Each year we hold an enthusiastic meeting at which the prizes won during the year are presented to the winning teams and individuals.

While the winning of the prizes is in itself a creditable thing, what is of far greater importance to the Company is the fact that the high marks received by the teams competing for the prizes are an indication of the high standard of efficiency attained by our First Aiders throughout the system.

While all this has been accomplished in a few years, yet we must not relinquish this good work. On the Canadian National, in addition to the First Aid instruction classes which are proceeding throughout the entire System, we now have three First Aid Instruction and Emergency Hospital Cars to enable the instructors to reach employees situated at outlying points, thus giving them the same opportunities in respect to First Aid teaching as enjoyed by their fellow employees at the larger terminal points. These cars are also equipped in every detail to give emergency hospital service wherever they may be called.

Arrangements have been made whereby these cars, in addition to being used for the purposes of the Canadian National Railways, will be available for use by the Canadian Red Cross Society as emergency dressing stations in isolated districts.

The thought I would leave with you is that, owing to the importance of First Aid, it ought to be taken up in the schools. The First Aid course given to the scholars need not be as extensive as we have on the railroad. It could be shortened and made interesting so that it would be attractive. If the principles of First Aid were taught, it would result in the boys and girls receiving a knowledge that would stand them in good stead and be of benefit throughout their whole lives. We all know that the minds of children are more retentive, and therefore what people learn in their youth is, as a rule, retained throughout their entire lives, although they may forget the things they learn later in life. Some after leaving school would not pursue and follow up First Aid, but they would keep with them what had been taught them in school. Undoubtedly, a great many of the scholars would become interested to such an extent that they would follow it up after leaving school until they became high class First Aid workers.

If First Aid were taught in the schools, instead of our saying that an accident could hardly happen anywhere on our railroad without there being someone nearby with First Aid knowledge to render the necessary assistance, in years to come it would be possible to say that an accident could hardly happen anywhere in the Dominion, even in a place remote from the railroad, without there being someone on hand to give the necessary First Aid.

Bearing this in mind and with a view to setting an example, several of our instructors have during the past two years devoted their spare time at night to the instruction of pupils from any of the schools in the towns where they were located in Junior First Aid. One case in particular comes to my mind. At Edson, Alberta, in February last, we had the pleasure of being able to present to seven girls and five boys their First Aid Junior Certificates which had been awarded by the St. John Ambulance Association as a result of their passing their examinations in First Aid as taught to them by our instructor.

Before closing, I would like to say that the Canadian National stands ready to assist and co-operate with railroads, industrial establishments and others in First Aid work and to place at their disposal the benefit of its knowledge and experience in this humanitarian and deserving work.

INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS OF ONTARIO

Annual Safety Conference at Toronto

THE annual safety convention under the auspices of the Industrial Accident Prevention Associations was held at Toronto on April 24-25. Mr. A. E. Adams, of Canadian Cottons, Limited, Hamilton, acted as chairman at the annual general meeting.

The report of the auditor was presented by Mr. W. S. Campbell of the Canadian General Electric Company Limited, a former chairman of the Associations. The statement showed a total expenditure of $97,941.81, which had been distributed over, roughly, 8,400 plants throughout Ontario.

Officers and Committee Appointed

The by-laws of the Industrial Accident Prevention Associations were amended, and the directing officers are now a president, a first vice-president, a second vice-president, an honorary treasurer, and a general manager and secretary. The report of the nominating committee, which was unanimously adopted, named Mr. F. M. Kimbark, Business Systems Limited, Toronto, as president; Mr. F. M. Morton, International Harvester Company of Canada Limited, Hamilton, as first vice-president; Mr. M. S. Moss, Anaconda American Brass, Limited, New Toronto, as second vice-president; Mr. W. S. Campbell, Canadian General Electric Company, Limited, Toronto, as honorary treasurer. Mr. R. B. Morley was again named as General Manager and Secretary.

An admisistrative committee, consisting of the president, the vice-presidents, the honorary treasurer, and the two immediate past chairmen, was set up, and an advisory committee, consisting of fifteen presidents, was named. This advisory committee consists of the following members: Mr. J. E. Atkinson, the Star Printing and Publishing Company Limited; Mr. Thos. Bradshaw, the Massey-Harris Company Limited; Mr. W. R. Campbell, the Ford Motor Company of Canada Limited; Mr. C. H. Carlisle, Goodyear Tire and Rubber Company, Limited; Mr. A. O. Dawson, Canadian Cottons, Limited; Mr. G. H. Duggan, Dominion Bridge Company Limited; Mr. D. C. Durland, Canadian General Electric Company Limited; Mr. W. C. Franz, the Algoma Steel Corporation Limited; Mr. R. S. McLaughlin, General Motors of Canada Limited; Mr. J. S. McLean, Canada Packers, Limited; Mr. R. H. McMaster, The Steel Company of Canada, Limited; Mr. P. J. Myler, Canadian Westinghouse Company Limited; Mr. A. C. Tagge, Canada Cement Company Limited; Mr. John M. Taylor, Taylor-Forbes Co., Limited; and Mr. D. M. Wright, McLagan Furniture Co. Limited.

Report of General Manager

The report of Mr. R. B. Morley, general manager, was as follows:—

The growing interest in our Safety Conventions is an indication of increasing participation by industry in accident prevention. The work is good, it is necessary and, truly it is, as the objects of the Associations state, "for the benefit of employer and employee." From the outset, Ontario's Workmen's Compensation Act contained a clause authorizing accident prevention. That is Section 114 of the Act and permits the Compensation Board to make grants for the maintenance of accident prevention associations that have been recognized by the Board. Schedule 1 of the Act consists of twenty-four classes of industry, and of these, nineteen have taken advantage of Section 114. Of necessity, these accident prevention associations work in close touch with the Compensation Board and it is my privilege and pleasure to pay public tribute to Mr. Sinclair and his associates for the whole-hearted manner in which they have assisted the work of the Industrial Accident Prevention Associations. Your directors have always found ready support in matters put before the Board and the spirit of understanding that has grown up is of practical service to industry throughout the classes included in our membership.

Accidents in 1929.—Last year there were 87,103 accidents reported to the Compensation Board, including 510 fatal cases. The total cases constituted a record in reporting, although fatalities were lower than in 1928. The total benefits awarded by the Board in 1929 amounted to $8,012,157.78, of which $6,626,633.16 was for compensation and $1,385,524.62 for medical aid. These are staggering figures, and if it were not for the practical demonstrations in accident reduction given year by year by a substantial number of plants one would almost lose heart. But we have results in accident control by a sufficient number of industries for me to say "Forget the alibi—Accidents are preventable." Industry is coming to realize that it is a matter of example and control—and both this example and control must be of the executive type.

Class Associations.—The Industrial Accident Prevention Associations is a federation of a number of Class Associations, representing sixteen classes of industry embracing about eight thousand industries in all and covering more than two thirds of the total payroll in Schedule 1 of the Act.

These class associations are:—

Woodworkers Accident Prevention Association—Classes 3 and 4.

Ceramics and Stone Safety Association—Class 6.

Metal Trades Safety Association—Classes 7, 8, 9, 10 and 11.

Chemical Industries Safety Association—Class 12.

Food Products Safety Association—Classes 14 and 15.

Leather, Rubber & Tanners Safety Association—Class 16.

Textile and Allied Industries Safety Association—Classes 17 and 18.

Printing Trades Accident Prevention Association—Class 19.

Construction Safety Association—Class 24.

The general campaign is carried on under the name of the Industrial Accident Prevention Associations. The literature is issued under that name and the field force is directed by that organization.

Field Force.—The field force, or inspection staff, consists of Mr. V. L. Mummery, chief inspector, and twelve inspectors whose duties lie mainly in the industries in our membership. These men have authority under the Compensation Act to enter "at all reasonable hours" and their function is accident prevention pure and simple. They inspect for hazards and investigate accidents to ascertain if these can be prevented in the future. Another important phase of their work is holding meetings of employees and such meetings are an excellent means of stimulating the interest in accident prevention.

Literature.—Safety bulletins are not a cure-all for bad accident experience—in the past some employers have felt that the posting of bulletins was all that was necessary to cut down accidents. I have dealt extensively with safety bulletins for sixteen years and know bulletins are only one phase of the situation. I know too that good bulletins properly posted will assist materially in any safety campaign.

In 1929 we distributed more than three-quarters of a million pieces of literature, including the following:—

Monthly Memorandum for Industry	75,000
Safety Bulletins	385,000
Special Leaflets	70,000
Pay Envelope Inserts	15,000
Safety Picture Books	50,000
Foreman's Record of Accident	20,000
Safety Blotters	10,000
Special Reports (There's A Lesson in Every One)	6,500
Self Inspection Form	7,500
Accident Record Forms	1,600
Departmental Safety Records	500
Special Cards and Tags	11,000
General Shop Safety Rule Books	67,500
Safety Calendars	45,000
Proceedings, 1929, Safety Convention	3,000
Statistical Reports to Larger Firms	1,500

We are exchanging literature month by month with other organizations in the safety movement in England, France, Germany, Holland, Belgium, Switzerland, Czechoslovakia, Hungary, Austria, Poland, Russia, Finland, Norway, Sweden, Japan, the United States and Australia. We appreciate deeply the co-operation of these good friends of ours throughout the world and tender them our heartfelt thanks.

Divisions.—Some years ago, your directors approved of the principle of sectional work and the first area to be established included Essex and Kent counties and is known as the Essex-Kent Division. This division has a small office in Windsor with Mr. W. H. Cox of our field force as secretary. The Wentworth Division has been in operation for about eighteen months, with a small office in Hamilton, and Mr. J. W. MacFarlane of our field staff acts as Secretary there. The idea is basically sound and a great deal of local interest has been stirred up by these two divisions, the executive committees of which deserve your thanks.

Executive Committee.—I repeat what I said before—the members of the executive committee of the Industrial Accident Prevention Associations take their work seriously and do direct the campaign in a manner that is unusual. It is a remarkable thing to secure a body of men who willingly devote so much time and thought to what is "everybody's business." I look on the directors as my good friends and thank them sincerely for the help freely given.

Advisory Committee.—I believe the advisory committee was one of the real accomplishments of 1929. Fifteen men, presidents of their respective companies, leaders in their own lines of business, have agreed to act as an advisory committee to the Associations and

so have added to the prestige of the safety movement in Canada.

The Staff.—To the office staff under Mr. J. L. Dodington, our Office Manager, and the field force under Chief Inspector Mummery your thanks and mine are due. I believe each member of the staff is vitally interested in the Associations and the campaign being conducted on behalf of employer and employee in industry

One of the great insurance companies of the United States makes the statement that for every lost-time injury (i.e. an injury involving lost time in excess of the shift in which the injury occurred) there are twenty-nine minor injuries and three hundred non-injury accidents. This proves that high accident frequency impairs efficient plant operation. Accidents are mistakes—mistakes on the part of someone, and the fewer the mistakes the more contented will be your staff from the president down and the more effective your organization.

Class Meetings

All the Class Safety Associations comprising the membership of the Industrial Accident Prevention Associations held their annual meetings on April 24. These Associations are:—the Woodworkers Accident Prevention Association, Ceramics and Stone Safety Association, Metal Trades Safety Association, Chemical Industries Safety Association, Food Products Safety Association, Leather, Rubber and Tanners' Safety Association, Textile and Allied Industries Safety Association, Printing Trades Accident Prevention Association, and Construction Safety Association. At each of these meetings the Chairman presented a report, the report of the secretary-treasurer was submitted, and new officers for the ensuing year were elected, following which there was a general discussion on problems relating to the particular industry.

Premier of Ontario

At a banquet held at the Royal York Hotel the Hon. G. Howard Ferguson paid a tribute to the essential work that is carried on by the Associations, and also to the chairman and members of the Ontario Workmen's Board, who, he said, were performing an important service not only to industry but to the community at large.

C.P.R. President's Address

Mr. E. W. Beatty, chairman and president of the Canadian Pacific Railway Company, said that no industry, no public utility, and certainly no railway company was immune from accidents, and perhaps one of the most eloquent evidences of progressive efficiency lay in the way to which, by human foresight and by education, accidents are being prevented. He said the Workmen's Compensation Act seemed the logical outgrowth of industry. In Ontario his company had paid over three million dollars in assessments from the first of January, 1915, up to December 31, 1929. He spoke of the Angus shops of the company and the accident experience there, which was controlled through supervision of shop practices, education of the men, and the placing of the responsibility on the immediate officer in charge.

In closing, Mr. Beatty referred to "the accident of unemployment". He said this was a problem that must be dealt with in a big way. One of the real problems of Canada was this matter of seasonal employment, and he hoped that a solution would be found possible without the introduction of practices that take the instinct for work away from those who themselves have no wish to lose it.

The address of Mr. W. D. Robb, Vice-President of the Canadian National Railways, is reproduced in part on page 535 of this issue.

Suggestions for Coming Year

Mr. F. M. Kimbark, the newly elected president, suggested that it might be necessary for the Executive Committee to consider more drastic application of section 83 of the Workmen's Compensation Act, through the Workmen's Compensation Board, in the case of those firms who had a bad experience. He said that the duties of the organization were not only to make recommendations for the improvement of plant conditions, but also to interest employer and employee in accident prevention and secure the co-operation of these two in the work of the organization. Mr. Kimbark believed that the employer could do more to interest his employees in accident prevention by devoting five minutes a week to it, than the organization alone could do in years. He recommended that the organization immediately give some consideration to the formation of a safety exhibit of a permanent character.

Mr. V. A. Sinclair's Address

Mr. V. A. Sinclair, K.C., Chairman of the Workmen's Compensation Board of Ontario, reminded the meeting that the Act did not provide for sickness benefit nor for old age pensions, but simply took care of industrial injuries. He said it seemed necessary, periodically, to remind people that this was so. He

referred to the large accident cost in 1929, when the total figure was over eight million dollars—the largest award in any one year since the inception of the Board in 1915. The Board collected the money from industries under compensation, and collected only enough money to pay the cost of accidents that happened in the various classes. The Board fixed each year a provisional rate of assessment for the industries in schedule 1, and these assessments were graded from 10 cents per $100 payroll, to $10 per $100 payroll, according to the hazard. Each year, at the beginning of the year, when the experience for the past twelve months was known, the Board adjusted the provisional rate fixed in the former year. In this way industries got the benefit of any accident prevention work that might have been done. Mr. Sinclair quoted figures showing certain classes had had a bad money experience, and in consequence their rate had been raised. In other cases rates had been lowered because of good experience. He suggestd to those present that there was only one way of dealing with the problem of increasing costs, and that was through effective accident prevention work. The Board was co-operating with the organizations set up under Section 114 of the Compensation Act, and would continue to do so.

Addresses were delivered also by Mr. Denton Massey, of the Massey-Harris Company, Mr. W. E. Darling, of Cincinnati, Mr. Parker Bailey, Mr. J. D. Mooney and Mr. A. H. Young, of New York.

The Safety Play, "Built on Bluff", was presented by members of the Wentworth Division of the Industrial Accident Prevention Associations. This play deals with the manner in which a general manager of a plant had been fooled on his accident experience, having been given the impression that everything was going remarkably well, while, as a matter of fact, the story was not being told to him. The players were all representatives of plants in Hamilton, and the play and players received an ovation at the end.

A safety exhibit was shown, including safety devices of various kinds, charts showing the method of operating certain forms of accident prevention activity, displays of safety literature, "First Aid" and Safety trophies, and materials from the Workmen's Compensation Board. The safety devices shown included safety goggles, respirators, safe foundry boots and leggings, safety bulletins and boards, guards for wood working machinery, first aid equipment, non slip soles, drive-belt guards, etc., etc.

NOVA SCOTIA ACCIDENT PREVENTION ASSOCIATION

THE eleventh annual meeting of the Nova Scotia Accident Prevention Association was held on April 24 at Halifax, representatives of all branches of industry through the province attending. The retiring President, R. J. R. Nelson, in presenting his report, outlined the two chief objects of the Association as set forth in the constitution, which are, namely, the promotion of the work of the prevention of accidents and industrial diseases in all industries, and to represent the employers in connection with the administration of the Workmen's Compensation Act. The report pointed out that accidents were a burden on the employee, employer and the society, and made particular reference to the difficulty in coping with the problem in Nova Scotia, owing to the fact that industries are so varied and scattered over the Province, and with few exceptions are on a limited scale. The President expressed his appreciation of the wholehearted support given him throughout his term of office by the executive committee, and of the sympathetic co-operation of the Workmen's Compensation Board.

The report of the Secretary, submitted by Mr. H. R. Thompson, indicated that a study of the records of payroll figures from the Workmen's Compensation Board showed the industrial activities of the Province had been carried on at a greater scale than for some years past. The total wages paid showing in the aggregate an increase of about six and one-half million dollars over the previous year. Under the heading, accidents, the secretary pointed to the increase shown by the reports submitted to the Compensation Board of accidents in industry, and also to a slight increase in the number of fatalities, stating that the number of reported accidents has been increasing comparatively each year since the Act became operative. This trend, he said, is in keeping with the experience in other jurisdictions. The chief reasons for this are that the employees are becoming familiar with the provisions of the Act and the ways and means of taking advantage of it, and the employers are encouraging the reporting of all minor accidents, so that first aid treatment may be given and the injury followed up.

Mr. M. L. Fraser, field worker of the Association, presented a report covering the work of his department for the past year, and paid tribute to the splendid safety work which is

being done by the Dominion Iron and Steel Company at its Sydney plant.

The election of officers for the year resulted as follows:—President, M. R. Chappel, Sydney; 1st Vice President, C. J. Hoyes; 2nd Vice President, G. S. Harvey, Murray, N.S.; Secretary Treasurer, H. R. Thompson, Amherst; Asst. Secretary, R. J. Walsh; Field Officer, M. S. Fraser, New Glasgow. General Executive Committee—mining, A. K. McLeod, Springhill; lumbering and wood-working, B. J. Waters, Liverpool; metal trades, A. W. McDonald, Glace Bay; miscellaneous manufacturing, J. S. Misener, Dartmouth; building and construction, A. A. McDonald; public utilities, G. G. Spencer, Sydney; transportation, J. J. Mathers.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Industrial Hygiene in Ontario

The fourth annual report of the Department of Health of Ontario, being for the calendar year 1928, recently received, contains a chapter by Dr. J. G. Cunningham, director of the Division of Industrial Hygiene. He states that medical services rendered to the industrial population from the standpoint of the peculiar needs of industry are increasing. Such services are not developing without conscious effort on the part of the employers, wage-earners and physicians to come together frequently and before medical emergencies arise.

"While the problems of accidents and general sickness are first in importance the attention of industry is frequently focussed on the need for organized medical service for prevention by some experience with the effects on workmen of one or other of the specific poisons incident to a process. These facts emerge in the course of the attempt of the Division to further the application of knowledge now available for the prevention of disease and disability among this section of the population. The number of enquiries from employers, employees, physicians and nurses regarding industrial hazards to health is constantly increasing. The number of plants, both small and large, instituting some measure of medical supervision, varying in scope from the provision of adequate first aid to the supervision of health generally, including attention to minor complaints of ill-health and initial and periodical physical examination, is also increasing."

It is recommended that some provision should be made for the physical examination of children leaving school to enter industry, conducted in the light of suitability for the work for which the child has been chosen, by physicians familiar with industrial processes. "These examinations should be paid for by the employer of this type of labour and the details should be worked out in close association with the final school examination."

A number of problems were submitted by the Factory Inspection Branch of the Ontario Labour Department and the Industrial Accident Prevention Associations, mainly involving the chemical analysis, by Mr. H. E. Rothwell, chemist of the division, of substances considered to be hazardous to health, and the inspection of factory premises with the district factory inspector.

The Chief Sanitary Inspector, Mr. Alex. R. White, reported that the mining industry increased almost by two-thirds during 1928. At the date of the report the numbers employed in the unorganized territories were as follows:—

	Employed Men
152 mining camps	8,430
117 construction and road camps	8,110
56 saw mills and paper mills	5,340
9 fishing stations	775
2 stone quarries	250

and also of course, the very numerous railway extra gang camps which are scattered all over the north. The Division, therefore, has a responsibility for approximately 40,000 men employed in the 761 camps in the industrial north of the province.

"All of this work is, of course, covered by contract between the employer and a physician, and in connection therewith the physicians have forwarded to the department 753 monthly reports and submitted 209 sketches of new camps. Added to this are the inspections made by your staff of sanitary inspectors which inspections number 740, which make a grand total for the year of 1,493 inspections made. In addition to the above we have also rendered such service as was necessary to the host of small towns throughout the north, very often at the request of the local board of health or its officials."

First Aid Provisions in Saskatchewan

The Regulations of the Saskatchewan Workmen's Compensation Board, printed in the last issue of the LABOUR GAZETTE (pages 392-396) were amended by a new Regulation (No. 33) published in the *Saskatchewan Gazette*, April 12. Regulation 15, paragraph (*h*) was amended by substituting the number "18" for the number "19" in the last line of the paragraph; and

the same Regulation paragraph (a12) was amended by substituting the number "17" for the number "18" in the last line of the paragraph.

Regulation No. 34, published in the *Saskatchewan Gazette*, April 26, provides as follows:—

Notwithstanding the general provisions of regulation No. 26, the minimum first aid kit to be provided and maintained in all country elevators wherever situate in the province and in all retail lumber yards outside of a city shall be as follows: Minimum First Aid Kit for all Country Elevators and for Retail Lumber Yards outside Cities:—

1 pair tweezers, 1 eye dropper, 1 camel's hair brush, 1 dozen safety-pins, 1 small bowl, 1 eye shield, 1 package boracic acid for eye wash, 2 ounces tincture of iodine or a sufficient quantity of a recognized antiseptic for washing wounds, 1 roll sterile gauze, 1 tube of carbolated vaseline.

The whole of the above kit must be kept in a clean and suitable receptacle in a place free from dust or dirt and readily accessible to the workmen in each of such country elevators or lumber yards.

Any of the contents of the kit which would be dangerous if taken internally must be contained in a package plainly marked in red letters "poison."

The above equipment shall to examined and checked over at least once per month by the person in charge thereof and renewed as often as necessary.

Building Safety Committee at Montreal

Twenty-one representatives of contracting firms of Greater Montreal met on April 2, under the auspices of the Province of Quebec Safety League for the purpose of forming a Construction Safety Committee. It was explained that the object of the League was to organize a branch of its industrial section, so that contractors might benefit from the experience of the League in the matter of preventing construction casualties. The chairman, J. N. Doyle of the Dominion Bridge Co., Arthur Gaboury, secretary, and others expressed their views on the subject.

The committee is composed of the following members: Messrs. C. G. Morrison, of Church, Ross Company, Limited, secretary; W. H. Sutherland, of E. G. M. Cape and Company; E. G. Bertrand, of Dufresne Construction Company, Limited; and Jas. Wightam. Other committees formed are the statistics committee, the educational committee, the safety posters committee; and the speakers' committee.

Accident Prevention Groups at Winnipeg

Twenty-five groups of industry were reported upon at a recent meeting of the Accident Prevention Bureau of the Winnipeg Board of Trade. The twenty-five groups will, when fully organized, constitute approximately 500 firms with safety committees of from three to ten each which will form an active working force of about 2,500 men.

Groups reporting at the meeting were as follows:—Lumber, logging and pulp group; Building products group; Iron, steel and foundry group; Civic hydro, which includes provincial government utilities; Winnipeg Electric group; Wholesale and warehousing group; Laundry and dye works group; Storage and transfer group; Canadian Pacific Railway group; Canadian National Railway group; Sheet metal and allied lines; Paint and allied lines.

The groups now under organization are the: —Printing and publishing group; Abattoir and meat packing group; Brewery and soft drinks group; Dairy and creamery group; Bakery and confectionery group; Textile and manufacturing group; Oil station and garage group; Electrical contractors group.

The industrial division reported that there was no intention to disturb any safety plans which are now in force with any firm of employers but the object was to register the personnel of all safety organized plants in order that they be placed on the mailing list of the educational campaign committee now being undertaken.

Employee's Medical Clinics on Canadian National Railways

At a recent conference of general chairmen of the various railway brotherhoods, Sir Henry Thornton, president of the Canadian National Railways, intimated that medical clinics, where employees may secure free medical service, have been established at several of the large points on the system.

The object of this service is to keep the employees in good health by frequent voluntary medical examinations. It is not the company's intention to use the results of these medical examinations to interfere with the employees' positions in any way.

"We feel fully justified," says Joseph Corbett, general chairman for the carmen, "in recommending this medical service to our members and hope they will take full advantage of it."

Safety Committees in Cement Plants

The March-April issue of the *Accident Prevention Magazine*, published by the Portland

Cement Association contains references to safety features of two Canadian affiliates of the organization. The first outlines the activities of the safety committee at the Fort Whyte, Manitoba, plant of the Canada Cement Company. It is reported that this committee meets regularly once a month and oftener when there is some special item that needs immediate attention. Every accident, no matter how small, is investigated by this committee and a remedy designed to prevent a recurrence. Some new construction work is in process at the plant and this is being carried out with safety as the primary consideration regardless of time or cost.

The second plant referred to is the Bamberton Works of the British Columbia Cement Company Limited. This plant has a safety committee of 15 members selected from the various departments, which functions as a central committee, meeting once a month, and in addition special meetings are held to deal with any emergency. Monthly inspections of the plant are carried out by a member of the committee in conjunction with a senior employee who is not a member; different employees are detailed for these inspections each time. For the purpose of competitive and easily administered safety organization, the plant has been divided into five safety units, representing various phases of operation. In addition, there is a base unit for new employees who are placed in this group until considered sufficiently conversant with safety measures to be placed in the unit with which they are employed. Special emphasis is placed in this plant on training of new employees in safety work. Safety units which complete a period of six months free from accident are given a special button for each member. These may be worn until the unit meets with a lost-time accident when the buttons are called in and not re-issued until a further six months free-from-accident period has passed. Members of units which have a three year safety record are presented with gold buttons engraved with the words "Three Years Safety." These become the employees personal property.

Safety Work of Dominion Iron and Steel Company

The April issue of *Industrial Safety News*, published by the Nova Scotia Accident Prevention Association, contains a review of safety activities at the plant of the Dominion Iron and Steel Company, Sydney, Nova Scotia. It is stated that the employees at this plant established an accident prevention record during 1929, while during the past ten years the Sydney plant has made steady improvement in safety of operations amounting in the aggregate to a reduction of 80 per cent in the lost time accidents. A comparison by years of the progress made in the reduction of accidents over the last ten years shows that a decided improvement has been made every year. In 1923 due partly to a considerable increase in operations over the years 1921 and 1922, the number of accidents shows an increase over these two years. From 1923 to 1929, however, there was a steady reduction in accidents, while in the past three years, 1927, 1928, 1929, the percentage of improvement was greater than in the previous years under review.

The ten years decrease in the number of accidents is shown in the accompanying table. The index figures deal with the frequency rate of accidents only, but the report states that there has also been a very marked decrease in the severity rate as well, and the compensation cost has been materially lessened from year to year. The table also indicates the number of accidents per unit of 10,000 man-days worked, years 1920-1929 inclusive.

ACCIDENT RECORD AT SYDNEY STEEL PLANT, 1920-1929

Year	Number of accidents	Number accidents per 10,000 M.D's worked
1920	592	4·7
1921	376	4·2
1922	369	4·7
1923	498	4·4
1924	351	4·8
1925	222	3·1
1926	244	3·2
1927	141	1·7
1928	125	1·3
1929	102	1·0

Accident Prevention in British Factories

The last report of the Chief Inspector of Factories and Workshops of Great Britain expresses the opinion that the adoption by the International Labour Conference, at its Session of 1928, of a resolution relating to the safety first movement (LABOUR GAZETTE, July, 1928, page 757) is probably one of the most important steps that have yet been taken in connection with safety organizations in industry.

Great Britain has already begun to take action in this sphere. This year the report announces that the first stage has been passed in a dozen heavy industries, and furnishes details of the procedure adopted for the formation of safety committees, around which the movement centres. The active part played by the inspectors in urging heads of undertakings to set up their own safety organizations in their premises has been supplemented

by the lectures on accident prevention which members of the inspectorate staff have given to technical classes and meetings of foremen and workers.

A special conference reviewed and brought up to date agreements relating to safety in cotton spinning and weaving mills. It adopted the very important principle of the joint standing committee. This committee is to meet twice a year to review the cotton spinning agreement in the light of experience, paying due regard to the technical progress achieved in an industry that is as complex as it is important. The committee was formed soon after ratification of the agreement, and has already begun its work.

Another conference was held to consider measures for reducing the risk of collapse of derrick cranes employed on buildings under construction. Its work is already well advanced.

Thanks to the efforts of the inspectors, perceptible progress has been made in guarding transmission machinery. Too many persons, however, it is stated are not yet convinced of the dangers of revolving shafting. Suitable education and instruction are particularly necessary here.

The protection of hoists is steadily improving; they caused 10 per cent less accidents in 1928 than in 1927, and the number of fatal cases dropped by more than 40 per cent. Crane failures, however, were 8 per cent more numerous, and the number of fatalities rose by 19 per cent. Periodical examination by a competent person is too often wanting.

Constant supervision must be exercised over means of escape from factories in case of fire, especially in the more crowded industrial areas. The report quotes a number of instances of failure to observe the relevant regulations, and draws attention to the Home Office pamphlet on fire protection in factories.

A number of explosions of acetylene apparatus, described in detail in the report, show that the most elementary precautions in the use of acetylene are frequently neglected. Too many users are ignorant of the wide explosive range of air-acetylene mixtures.

Sickness Among Industrial Employees in United States

The United States Public Health Service states that reports from a group of about 35 industrial sick-benefit associations and company relief departments showed that cases of sickness and non-industrial injuries causing disability for 8 consecutive calendar days or longer occurred at the rate of 103.5 cases annually per 1,000 men during the period 1921 to 1928, inclusive. This figure may understate to some extent the real incidence of disability lasting longer than one week, because sick benefits are usually denied for certain diseases and for illness of any kind under certain circumstances as explained above.

Respiratory diseases were reported as the cause of 42.4 per cent of the cases; digestive diseases, 13.5 per cent; and external causes (non-industrial accidents), 9.8 per cent. These three groups, accordingly, accounted for nearly 66 per cent of the cases for which sick benefits were paid by associations reporting to the United States Public Health Service. In the respiratory group influenza or grippe continues to be of outstanding importance, accounting for 57.5 per cent of the respiratory cases in 1928, compared with 50 per cent during the period 1921 to 1928. The frequency of disability on account of respiratory tuberculosis was lower in 1928 than in any of the preceding years of record. Five of the nine years covered by the record were marked by influenza epidemics. In the other four years the winter incidence of influenza or grippe was of no inconsiderable magnitude.

Relatively low sickness rates were found among men employed in the iron and steel industry. An exception was the rate for pneumonia, which appears to be about 50 per cent higher than among other industrial employees as a whole. Data for a study of the incidence of pneumonia by occupation in the steel industry have been collected and are being analysed.

Standards for Lead Using Industries

The American Public Health Association has published in book form the report of a committee on lead poisoning which was presented to the Industrial Hygiene Section of the Association at its recent 58th annual meeting. The report establishes standards for the control of the use of lead in manufacture and for protecting the health of the workers. The standards are considered practical enough to warrant their application (directly or indirectly) by the general practitioner, the industrial physician, the safety engineer, and workmen's compensation tribunals according to their respective fields.

The report is divided into three parts: diagnosis, individual treatment, and industrial control. Because of the medico-legal importance of the subject, attention has been given in the medical sections to procedures and instructions that may with profit be followed by the physician who is preparing lead cases for compensation purposes. It is hoped that

this report may form the basis of some action by the Industrial Hygiene Section looking toward the establishment of appropriate standards for guidance in the matter of lead poisoning, subject to annual reconsideration until such a time as there is general agreement in the Section upon the subject and its component parts.

CONFERENCE ON RATIONAL ORGANIZATION AND INDUSTRIAL RELATIONS

THE record of an important recent conference of representatives of management, labour and social science, held last year by the International Industrial Relations Association at The Hague, Holland, has been published by the Association in a volume entitled "Rational Organization and Industrial Relations." The book deals with the entirely new industrial situation that has arisen in the world since the Great War. "New adjustments," it is stated, "are needed over greater areas; the centre of gravity seems to be changing from production to consumption. Both manager and worker are becoming increasingly aware of the controlling power of these outside forces. A hitherto unknown set of economic laws has come into play. Production and consumption interlock in a new and mighty way; and unless we are prepared to face the problem in its entirety and fundamentally to adjust ourselves, the current of events will find the world unable to establish and maintain such order as alone will be conducive to the benefit of mankind."

Stress is placed upon the modern tendency to organize employers and workers into groups for the purpose of joint or co-operative management of industry. This is declared to contain a "core of hope for the future of humanity," owing to the "amazing susceptibility of the human mind to group loyalties and ideas—an almost untilled field in psychology." In view of the value assigned to the principle of joint management, Canadian readers will be interested to find in the volume a memorandum contributed by Mr. R. A. C. Henry, director of the Canadian National Railways, describing the company's relations to organized labour and its union management cooperative plan.

Major L. Urwick, director of the International Management Institute at Geneva, who is one of the contributors to the "Symposium," makes a plea for a directive control of all industry, either on a national or international basis. Such control could be exercised only after industry has been subjected to the process of "rationalization." He quotes the definition of this term as supplied by the World Economic Conference in 1927 (LABOUR GAZETTE, July, 1927, page 770), as meaning "the methods of technique and organization designed to secure the minimum waste of effort and material," and including "the scientific organization of labour, standardization both of material and products, simplification of processes, and improvements in the system of transport and marketing." On the further declaration by the Economic Conference that "rationalization is calculated to secure to a community greater stability and a higher standard of life," Major Urwick comments as follows:—"These phrases are a clear admission that, whatever form of organization we may accept as the most practicable for the time being, there is a purpose in industry and commerce above and beyond the profit of particular business enterprises. Our economic machinery exists not to enrich individuals—that is incidental—but to serve the community. It is for this reason that I would suggest to you that the first item in any definition of what is a scientifically organized industry should be a clear statement of this aim or end on some such lines as the following: 'A scientifically organized industry is a group of enterprises engaged in supplying similar or allied requirements to the community by methods involving the minimum waste of either effort or material.'"

Other contributors to the conference whose addresses are given in the volume include Miss M. L. Fleddérus, of The Hague; Dr. Vernon, of the Industrial Fatigue Research Board, London; Erich Lübbe, president of the Works Council, Siemens Schuckert Company of Berlin; Dr. Northcote, labour manager of Rowntree and Company, York, England; Messrs. H. Dubreuil, secretary of the General Confederation of Labour, Paris; H. Pauwels, secretary of the Belgian Christian Confederation of Trade Unions, Brussels.

A general summary of the proceedings at the conference is contributed by Miss Mary Van Kleeck, vice-president of the International Industrial Relations Association, and director of the Department of Industrial Studies, Russell Sage Foundation, New York.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fourteenth Session

THE Fourteenth Session of the International Labour Conference will be held at Geneva, Switzerland, opening on June 10, 1930, the agenda being as follows:—

1. Forced labour.
2. Hours of work of salaried employees.
3. Hours of work in coal mines.

The Canadian delegates are as follows:—

Government Delegates.—Mr. Gerald H. Brown, Assistant Deputy Minister of Labour; Dr. W. A. Riddell, Canadian Advisory Officer to the League of Nations, Geneva.

Technical Advisers to the Government Delegates.—Mrs. R. F. McWilliams, Winnipeg, Manitoba; Mr. Byron Baker, Ottawa, Ontario; Mr. Daniel W. Morrison, Glace Bay, N.S.; Mr. Alfred Martin Boucher, Quebec, P.Q.

Employers' Delegate.—Major J. R. Roaf, Chairman, B.C. Division of Canadian Manufacturers' Association, Vancouver, B.C.

Technical Adviser to Employers' Delegate.—Mr. H. W. Macdonnell, Secretary, Industrial Relations Department, C.M.A., Toronto, Ont.

Workers' Delegate.—Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. J. T. Foster, vice-president, Trades and Labour Congress of Canada, Outremont, Que.

Tenth Anniversary of the International Labour Organization

Ten years ago the International Labour Organization began to carry out the mission entrusted to it by the Peace Treaty. On October 29, 1919, the first International Labour Conference opened at Washington and elected the original Governing Body. In January, 1920, this Governing Body held a session in Paris, at which it constituted the International Labour Office and appointed Mr. Albert Thomas as Director. After being established for some time in London, and transferred temporarily to Genoa for the second session of the Conference in May, 1920, the Office was fixed at Geneva, the seat of the League of Nations, during the course of the same year.

The International Labour Office has recently celebrated its tenth birthday by publishing in English, French, German, Italian and Spanish an illustrated Album giving in clear and concise form an outline of the work undertaken and the results obtained by the Office during its first ten years of existence.

Publications of the Office

The International Labour Directory (Co-operative Organizations).—The International Labour Office recently re-issued that part of the International Labour Directory dealing with co-operative organizations. It contains important information concerning the development of the co-operative movement throughout the world. Mention is made of 728 international or national organizations working in 48 countries. For 272 central organizations, other than those dealing with banking or insurance, it is found that the total sales for the year 1928 (sales to members and sales of members' produce) by the affiliated societies amounts to no less than 10,000 million dollars. For the same year the general movement of the funds of 44 co-operative banks exceeded 50,000 million dollars, and that of 90,000 credit co-operative societies grouped into 74 organizations exceeded 18,500 million dollars. These figures include those for the Russian co-operative societies.

With regard to membership, the fact that certain organizations sometimes consist, at least partially, of the same societies has led to a limitation of the list to 237 central organizations which are mentioned in the Directory. The tables concerning these 237 organizations working in 39 countries (not including the U. S. S. R.) show that their total membership at the end of 1928 exceeded 39,500,000 as compared with 35,500,000 in 1925—an increase of 11 per cent. At the same time the official Russian figures put the number of members of the co-operative organizations in the U. S. S. R. at the same date at 35 millions. On account of the limitation mentioned above, the total figure of 74,500,000 cannot be a true representation of the total number of co-operative members in the world, but it at least gives some idea of the growing importance of the co-operative movement.

Vocational Education in Agriculture.—The International Labour Office has just published a report on Vocational Education in Agriculture. The report in question has been based on replies received by the International Labour Office to a questionaire forwarded to all the States Members of the Organization and to the Governments of Russia and the United States and on information obtained from various other sources. The first part of this report contains a description of vocational agricultural education, its organization and character, its large divisions, and the methods and technique employed, followed by certain remarks on the results obtained and possible future development. The second part consists of a series of monographs on the systems of vocational agricultural education existing in thirty-five different countries.

Occupation and Health.—A further series of brochures of the Encyclopaedia of Hygiene,

Pathology and Social Welfare, published by the International Labour Office under the title "Occupation and Health," has just appeared, covering articles on the following subjects: Dinitrophrenol; Dinitrobenzene; Ether; Fatigue Tests; and Fertilizers, Manures.

Reports on Hours of Work of Salaried Employees and Forced Labour

In preparation for the Fourteenth Session of the International Labour Conference, which is to open in Geneva on June 10, the International Labour Office has published reports dealing with two of the items on the agenda which received preliminary consideration last year, and come up again this year with a view to second and final discussion, and to the adoption, if thought fit, of a Draft Convention or Recommendation. The subject matters in question are: Hours of Work of Salaried Employees; and Forced Labour, respectively. These reports contain the replies of different Member States of the International Labour Organization to questionnaires which were adopted at the Twelfth Session of the International Labour Conference.

Hours of Work of Salaried Employees.—Out of 29 government replies received, 18, including those of France, Germany and Italy, favour the adoption of a Draft Convention to regulate internationally the hours of work of salaried employees. Of the 11 governments remaining, 6 express a preference for dealing with the subject by a Recommendation, while 5 (including Great Britain and Japan) are not in favour of any immediate international action by way of positive regulation at this Session of the Conference. The general contention of the latter group is that this subject is not yet ripe for practical and effective international action. In the light of these replies, the International Labour Office has appended to the report the texts of a proposed Draft Convention and two proposed Recommendations. The proposed Draft Convention provides for the limitation of hours of work in commercial or trading establishments and offices to forty-eight in the week. Provision is suggested whereby this maximum, though based on an eight-hour day, may be so arranged that employees may work up to ten hours on certain days of the week. Provision is also made for considerable elasticity in the application of the Draft Convention—provision, for example, for exemptions in certain cases, for the making up of lost time, for occupations which are inherently intermittent, etc.

The proposed Recommendations provide for investigations by the several governments into the conditions with regard to hours of work prevailing in hotels, restaurants and similar establishments, and in theatres and other places of public amusement. It is suggested that the results of these investigations should be reported to the International Labour Office within four years, with a view to the possible consideration at a later Session of the Conference of the adoption of Draft Conventions applying to the establishments in question.

Forced Labour.—This report contains the replies of 23 governments to the comprehensive questionnaire adopted by the last Session of the Conference. A number of these replies, sent by governments having no direct experience of the problems of forced or compulsory labour, are confined to a general expression of sympathy with the object in view or to comments on special points. If account is taken only of the replies of the governments most directly and practically concerned with native labour problems, it is found that they are for the most part in favour of the ultimate suppression of forced or compulsory labour in all its forms.

Equally general, however, is the opinion of the governments concerned that, whilst the complete suppression of forced or compulsory labour is the final objective, immediate suppression is not practicable, and, as an interim measure, its use should be limited and regulated. The Office has accordingly worked out and appended to the Report the texts of a proposed Draft Convention and of two proposed Recommendations. The proposed Draft Convention provides for a general undertaking to suppress forced or compulsory labour in all its forms, and goes on to specify those forms of such labour which can be suppressed immediately or in the near future. As regards other forms of forced or compulsory labour, it lays down the principles which should limit or regulate their use during the period of transition to the employment of voluntary labour only.

The Draft Recommendations are designed to supplement the proposed Convention, and deal respectively with the principles which it would be desirable to apply in order to prevent indirect compulsion to labour, and with certain principles and rules relating to the regulation of forced or compulsory labour which it may not be expedient to include in the Convention itself.

Observance of International Labour Conference Conventions

A meeting was held in the International Labour Office in April of a Committee of Experts appointed to examine the annual reports which are made by various countries on conventions of the International Labour Conference to which they are parties. These reports are made under the authority of Article 408 of the Treaty of Versailles for the purpose of ascertaining the measures which

have been taken to give effect to the provisions of the different conventions which have been accepted and ratified by individual countries. This Committee forms a valuable part of the machinery of the International Labour Office. Under Article 408 of the Peace Treaty each country which has ratified a convention adopted by the International Labour Conference is under an obligation to present to the office an annual report on the measures which it has taken to give effect to the provisions of the convention. A summary of these reports, which are in a form prescribed by the Governing Body of the office, is laid before the conference by the director.

It has frequently been pointed out that the mere act of ratifying a convention does not in itself constitute any guarantee for the immediate observance of the convention either in the letter or in the spirit. For the establishment and maintenance of complete confidence as between the several countries which have ratified any convention, it is necessary that each should have some assurance that the others have passed and are actually enforcing legislation which is in concordance with the provisions of the convention.

Until four years ago, the summary of the annual reports under Article 408 presented to the conference did not form the subject of special consideration by the conference. In 1926, however, as a result of the initiative of the British Government, the conference set up experimentally a definite procedure for dealing with the reports. It decided in favour of the appointment by the Governing Body of a small Committee of Experts having knowledge of international legislation and labour conditions, to make a preliminary scrutiny of the reports, to point out deficiencies or obscurities in the information they contained, to call attention to differences in the interpretation of the conventions by different countries, and generally to assist the Governing Body and the conference in making the fullest use of the reports. At the same time, the conference decided that at future sessions it should itself appoint a committee of delegates to study the reports in the light of the findings of the Committee of Experts. The Committee was accordingly appointed in 1927 and met in that year as well as in 1928 and 1929.

The meeting of the Committee held last month was the fourth. With the increase in the number of conventions adopted and in the number of ratifications registered, there has been a corresponding increase in the number of reports submitted to the Committee. In 1928 it examined 175 reports; last year, 223; this year, 287. The Committee noted that the majority of the reports gave rise to no new observation, and that in general the application of conventions is being brought more and more into exact conformity with the texts. At the same time, the Committee called attention to several points in some of the reports in regard to which supplementary information might be requested. It also made a number of suggestions for facilitating its future work. Finally the Committee emphasized the importance of the procedure for dealing with the reports, which may now be considered firmly established as a means of ensuring a mutual exchange of information and a friendly supervision as between the countries which have ratified conventions, and thus obviating recourse to the sanctions provided in Article 409 and the ensuing Articles of the Peace Treaty.

Four years' experience has proved that the detailed scrutiny of these annual reports enables a very complete judgment to be formed of the extent to which conventions are respected by the States which ratify them. Incidentally, the reports throw some light on the methods by which States that have ratified conventions have surmounted obstacles which deter other States from ratifying, and to that extent their study may contribute to the general furtherance of ratification.

Age as a Factor in Employment

The Industrial Relations Conference of the Associated Industries of Massachusetts reports finding no data to show general discrimination against older workers, either as to hiring or discharging, and that most employers in that State are trying earnestly to find ways to lessen the difficulty of older workers in finding and retaining employment. It is pointed out that the problem grows as the concern grows old. The following measures of relief in use and proposed are listed by the Conference:—1. Wider use of retirement wages; 2. Annual complete physical examination of older workers at the employer's expense; 3. Regular interviews with older workers; 4. Reassigning older workers in the same plant; 5. Promotion of the saving health; 6. Permanent employment statistics.

The Labourers' Protective Association of Charlottetown recently asked the government of Prince Edward Island to enact a Workmen's Compensation Act for the province. It was ascertained that no action should be taken by the Legislature in that direction this year, and the Associations will continue to press for the passing of a Compensation Act next year. The Railway Employees' Compensation Act, enacted by the provincial legislature in 1926, was outlined in the LABOUR GAZETTE, June, 1926, page 546.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on April 1, was 7,153, their employees numbering 961,182 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,765, having an aggregate membership of 211,864 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of April, as reported by the Employers

Employment at the beginning of April showed a seasonal decline which was somewhat larger than that noted on April 1, 1929; this was partly due to unusually large seasonal contractions in logging camps, in which there has been exceptionally great activity during the past winter. The Dominion Bureau of Statistics tabulated returns from 7,153 firms whose staffs aggregated 941,427 persons, compared with 961,182 in the preceding month. The index number stood at 107·8, as compared with 110·2 on March 1, and with 110·4, 102·3, 97·4, 92·5, 88·3, 90·4, 88·7, 81·8 and 85·1 on April 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Thus the index number at the latest date, while lower than one year ago, is considerably higher than it was two years ago.

The most outstanding changes in employment were the heavy seasonal losses in logging, where staffs were reduced by over 24,000 workers, and those also of a seasonal nature, in mining; on the other hand, advances were reported in manufacturers, construction and transportation.

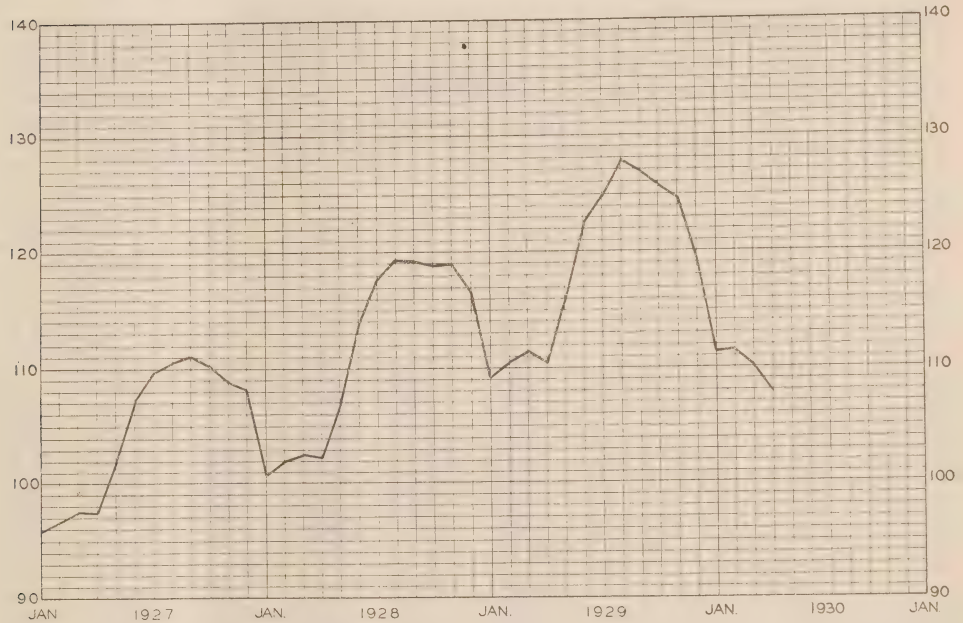
Employment by Economic Areas

All provinces except British Columbia registered reduced employment, the losses in Quebec and Ontario being greatest.

Maritime Provinces.—There was a further decrease in employment in the Maritime Provinces on April 1, when the 525 co-operating employers reduced their payrolls by 1,624 persons to 72,253. Manufacturing, mining and construction were slacker, and logging showed important seasonal losses, while shipping was decidedly brisker. The index, at 107·8, was slightly higher than at the beginning of April in 1929, and much higher than at the same date in any of the preceding eight years.

Quebec.—Manufacturers showed heightened activity, there being increases in the textile, iron and steel, building material and electrical apparatus divisions; on the other hand, losses were noted in pulp and paper and some other factories. Mining, transportation and construction afforded more employment, while logging reported very large seasonal contractions. Statements were received from 1,657 firms, with 262,565 employees, as against 269,708 on March 1. The index was higher than on the same date last year, when the curtailment indicated was on a greater scale.

Ontario.—The trend of employment was downward in Ontario, where 3,225 employers released 10,312 workers from their staffs, bringing them to 401,737 on April 1. A smaller reduction had been registered by the firms making returns for the same date in 1929, and the index then was nearly five points higher than at the beginning of April this year. Very pronounced seasonal losses were shown in logging on the date under review, while manufactures, construction, transportation and services recorded increases in employment.



Prairie Provinces.—Further losses were noted in the Prairie Provinces, in which improvement had been recorded on April 1, 1929 and 1928, while in previous years of the record the movement in the early spring had been

unfavourable. Most of the decline this year took place in manufacturing, logging and mining, the slackness in the last two being seasonal in character. The working forces of the 1,019 co-operating employers aggregated 121,804 persons, compared with 124,274 on March 1. The index, at 103·2, was over ten points lower than on April 1, 1929, but it was higher than on the same date in any other year since 1920.

Montreal.—Moderate expansion was shown in Montreal, according to 907 firms who reported the addition of 954 persons to their staffs, bringing them to 135,212 on April 1. The situation was better than on the same date last year, when similar increases had been indicated. Iron and steel, electrical apparatus and textile facories and transportation recorded heightened activity, while the fluctuations in other industries were slight.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Continued improvement was noted in British Columbia, according to returns tabulated by the Bureau from 727 firms with 83,068 employees, or 1,794 more than in the preceding month. Additions to staffs had also been indicated on April 1 a year ago, when employment was in the same volume. The greatest gains at the beginning of April, 1930, were in manufacturing, transportation and construction, while mining and logging released some help.

Tables I gives index numbers by economic areas.

Employment by Cities

Employment increased in Montreal, Quebec City, Toronto, Ottawa, Windsor and the Adjacent Border Cities and Vancouver, while losses were noted in Hamilton and Winnipeg.

Quebec.—Manufacturing, construction and transportation registered the most outstanding gains in Quebec City, while there were only small changes in other industries. Statements were received from 114 employers with 11,219 workers, as compared with 11,049 in the preceding month. Improvement was also indicated on April 1, 1929, but employment was in larger volume than on the date under review.

Toronto.—Advances were reported in Toronto, where conditions were not quite so active as at the beginning of April, 1929. The working forces of the 989 co-operating firms totalled 123,480 persons, or 535 more than on March 1. Considerable improvement was registered in manufacturing, notably of iron and steel products. Other groups showed little general change.

Ottawa.—There was a minor increase in employment in Ottawa, chiefly in manufacturing; an aggregate payroll of 12,572 workers was reported by the 150 employers whose statistics were tabulated, and who had 12,539 in their last report. The index was several points higher than in the spring of 1929, when the trend was also upward.

Hamilton.—Manufacturing afforded heightened employment in Hamilton, while construction released employees. Returns were compiled from 217 firms employing 36,096 persons, or 25 less than on March 1. The level of employment was lower than on the same date last year, when large gains were indicated.

Windsor and the Adjacent Border Cities.—There was a further pronounced expansion in employment in the Border Cities on April 1. Data were received from 134 firms employing 17,570 workers, as against 16,951 in the preceding month. Automobile plants reported a very large share of the advance, while other groups showed only slight changes. The situation was not so good as in the spring of 1929, although it was better than on April 1 of 1926, 1927 and 1928.

Winnipeg.—Employment decreased in Winnipeg, where 401 persons were released from the payrolls of the 342 employers furnishing statistics, who reported 30,952 workers. Iron

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number o all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100).

——	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921

and steel plants were more active, but construction and trade were slacker. On April 1, 1929, a gain had been indicated, and the index was higher.

Vancouver.—Continued improvement was noted in Vancouver, according to 288 firms with 29,790 employees, as compared with 29,179 in the preceding month. The most marked increases were in construction. Rather larger gains had been made at the beginning of April of last year, when the index was slightly lower.

Index numbers by cities are given in Table II.

Manufacturing

Further improvement was recorded in manufacturing, particularly in the iron and steel industries. Lumber, building material, textile and electrical apparatus plants also afforded increased employment, while rubber, non-ferrous metal, mineral products, leather, pulp and paper and tobacco works showed curtailment. Statements were received from 4,313 manufacturers, employing 536,120 operatives, as compared with 533,790 in the preceding month. The situation was better than on the same date of any other year of the record except 1929.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Animal Products, Edible.—Improvement was noted in fish-preserving and dairying establishments, while meat-packing plants were slacker. There were gains in the Maritime Provinces, Quebec and British Columbia, but losses elsewhere. Statements were tabulated from 178 firms employing 16,984 workers, as against 16,891 at the beginning of March. This increase was rather smaller than that recorded on April 1, 1929, when the index number was several points higher.

Leather and Products.—Tanning factories reported reductions in personnel, and minor losses were also noted in the shoe and glove branches of this group. The 187 co-operating employers reduced their payrolls from 16,621 persons in the preceding month, to 16,327 at the beginning of April. A falling-off had also been indicated on April 1 a year ago, when employment was at the same level.

Lumber and Products.—Seasonal expansion was indicated in miscellaneous wood-using industries, and vehicle works were also busier. The general improvement was slightly more than that noted on the same date a year ago, when the index was, however, a few points

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

higher. Statistics were compiled from 715 manufacturers, with 46,351 employees, as compared with 46,004 at the beginning of March. The largest gains were in Ontario and British Columbia.

Musical Instruments.—There was a decline in musical instrument factories, 37 of which employed 1,882 persons, or 118 less than on March 1. The reduction took place in Quebec. Employment was not so active as at the beginning of April, 1929, although the losses then indicated were on a larger scale.

Plant Products, Edible.—There was a decrease in employment in the period under review, chiefly in sugar and syrup. Returns were tabulated from 374 firms whose payrolls

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

declined from 28,552 persons in the preceding month to 28,331 at the beginning of April. General, but rather small losses were reported in all except the Prairie Provinces. The index was slightly lower than in the spring of last year, when an advance had been noted.

Pulp and Paper Products.—The movement in pulp and paper factories was downward, while only small changes were recorded in other branches of this group. According to data received from 539 firms, they employed 64,865 workers, as compared with 65,177 in their last report. Increases were noted in the Maritime and Western Provinces, while there were losses in Quebec and Ontario. Employment was in the same volume as on April 1, 1929, and was more active than in other years of the record.

Rubber Products.—Activity in 38 rubber works declined, 204 persons being released from their staffs, which totalled 16,143. A greater reduction had been shown on the same date last year, but the index then was some seven points higher.

Textile Products.—There was an increase in employment in textiles at the beginning of April, chiefly in thread, cotton, silk and garment factories, while headwear plants were slacker. Improvement had also been noted on April 1, 1929, when the situation was slightly more favourable. Statements were compiled from 667 manufacturers with 85,369 employees, or 722 more than on March 1, 1930. Most of the advance was in Quebec.

Tobacco, Distilled and Malt Liquors.—Decreases in employment on a larger scale than on April 1, 1929, were recorded in this group, 367 persons being released from the working forces of the 145 co-operating establishments, which employed 15,110 workers on the date under review. The contraction took place chiefly in tobacco works in Quebec and Ontario. The index was a few points lower than in spring last year.

Chemical and Allied Products.—One hundred and twenty-one plants turning out chemical and allied products reported 7,781 employees, as compared with 7,720 in their last return. Ontario and the Maritime Provinces registered practically all this slight gain. Conditions were better than on April 1 in other years for which data are available.

Clay, Glass and Stone Products.—Further increases in personnel were noted in building material works, 146 of which employed 11,294 persons, as against 10,776 in their last report. This advance involved about the same number of persons as that indicated on the corresponding date in 1929, when the situation was rather more favourable. Ontario and Quebec shared in the upward movement.

Electric Current.—Further moderate improvement was shown in this group, in which 94 plants reported 15,111 workers, or 49 more than at the beginning of March. Declines in Quebec were offset by gains in Ontario. The level of employment was higher than in the spring of other years of the record.

Electrical Apparatus.—Employment in electrical appliance factories again advanced, 231 employees being added to the forces of the 57 co-operating firms, who reported 16,708 on their payrolls. The bulk of the increase was in Quebec and Ontario. A larger increase had been noted on April 1, 1929, when the index was considerably lower.

Iron and Steel Products.—Statistics were received from 695 manufacturers in this group, whose staffs were enlarged by 2,750 employees to 153,808 at the beginning of April. There were considerable gains in automobile and other vehicle factories, as well as additions to payroll on a smaller scale in the wire, foundry and machine shop, sheet metal, agricultural implement, and other branches of the industry. Improvement was shown in all except the Maritime Provinces, that in Ontario being most noteworthy. Similar expansion had been recorded in the same period last year, but the index number then was some 15 points higher than on April 1, 1930.

Non-ferrous Metal Products.—Returns tabulated from 110 manufacturers in this group showed that they employed 19,777 persons, as against 20,597 on March 1. Most of the decrease took place in smelting and refining in Ontario. The level of employment was considerably higher than in the spring of any year since 1920 except 1929, when curtailment had also been indicated.

Mineral Products.—Reduced activity was reported in these industries at the beginning of April, 313 workers having been let out from the forces of the 86 co-operating establishments, in which 13,443 persons were employed at the beginning of April. Gas, oil and other mineral product works shared in the decline, which was largely made in the Prairie Provinces. The volume of employment in this group was greater than in the same period of other years since the record was commenced.

Logging

Continued and larger seasonal losses were shown in logging camps, 251 of which reduced their payrolls from 47,912 men on March 1 to

23,558 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces indicated reductions. Rather smaller contractions had been reported on April 1, 1929, but employment then was in somewhat smaller volume.

Mining

Coal.—As is customary at the beginning of April, there was a falling-off in employment in the western provinces. Data were received from 79 operators, whose staffs included 26,127 employees, as against 28,197 in their last report. The index was lower than in spring last year.

Metallic Ores.—Reports were received from 71 firms in this group, employing 16,813 workers, or 597 more than at the beginning of March. Most of the decline was in Ontario and British Columbia. Improvement had been indicated on the same date in 1929, but the index number then, as in other years of the record, was much lower.

Non-metallic Minerals, other than Coal.—Continued advances were registered in quarries and other divisions of this group, 70 firms employed 8,040 persons, as compared with 7,538 in the preceding month. Rather smaller advances were indicated by the 63 employers furnishing statistics on April 1 last year, when the situation was not quite so favourable.

Communications

According to information received from 166 communication companies and branches, they reduced their staffs by 382 employees to 28,466 on April 1. The greatest decline took place in Ontario. Despite this falling-off in employment, conditions continued better than in the spring of other years of the record, in most of which the trend was upward.

Transportation

Local and water transportation registered considerable advances, while further losses were indicated in steam railway operation. Statistics were compiled from 323 employers of 114,157 workers, as compared with 112,113 on March 1. Of the former number, 23,984 persons belonged in the local transportation, 76,075 in the steam railway and 14,098 in the water transportation division. In the railway transportation branch, employment was in smaller volume than on the same date last year, but the indexes in local and water transportation were decidedly higher.

Construction and Maintenance

Building—Employment in building construction continued at a high level, the index being considerably above that of April 1, 1929, when the additions to staffs were greater. Statements were compiled from 671 contractors, with 42,854 persons in their employ, or 568 more than in their last report. The most noteworthy improvement took place in Quebec.

Highway—Further additions to staffs were noted on highway construction and maintenance, 188 contractors employed 10,005 men, as compared with 8,986 in the preceding month. The Maritime Provinces and British Columbia reported practically all the advance. Losses had been shown on April 1, 1929, and the number then reported in this work was less than in the period under review.

Railway—There was a substantial increase in employment in the construction departments of the railways in the Western Provinces and Ontario. The working forces of the 39 co-operating contractors and divisional superintendents aggregated 29,533 men, whereas in the preceding month they had 28,589 employees. The index number was lower than in the spring of 1929, when more pronounced improvement had been recorded.

Services

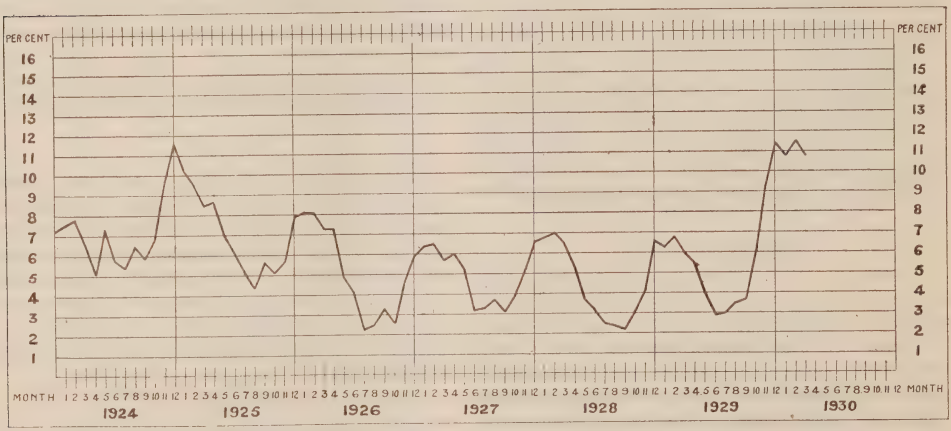
This group showed further moderate gains, according to 230 firms with 21,437 employees, compared with 21,225 in the preceding month. Laundries and dry-cleaning establishments and professional services registered the improvement. The trend was also upward at the beginning of April, 1929, but employment then was in less volume than on the date under review.

Trade

There was a gain of 29 persons in the forces of the 752 co-operating wholesale and retail establishments, which employed 84,317 workers on April 1. A considerable increase had been indicated on the same date a year ago, employment then, however, was slightly lower than on the date under review. A small falling-off was registered in retail stores, while the trend was upward in wholesale houses.

TABLES

Index numbers by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The column headed "relative weight" shows the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.



(2) Unemployment in Trade Unions at the Close of March, 1930

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making reports varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Some reaction from winter slackness among trade union members was apparent at the close of March, the slight improvement shown being manifest in comparison with March a year ago, conditions in Alberta especially being slack.

A separate tabulation is compiled monthly showing the unemployment situation among trade union members in the largest city in each province except Prince Edward Island. The most noteworthy employment advance from February was registered by unions in Halifax where the unemployment percentage was reduced by slightly over 4 per cent during March. In Vancouver, Edmonton, Montreal and Regina also gains of somewhat lesser volume were recorded, while in Toronto the situation showed an improvement of but 1 per cent. On the other hand, Saint John and Winnipeg reported increases in idleness which

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

largely of a seasonal character and of rather general distribution throughout the various industries. For the month under review reports were furnished from a total of 1,765 labour organizations with 211,864 members, 22,912 of whom, or a percentage of 10·8, were idle at the end of the month, contrasted with 11·5 per cent in February. Less active conditions, however, were indicated than in March last year when 6·0 per cent of the members reported were without employment. The provincial changes in comparison with February were not outstanding, Nova Scotia, Quebec, Ontario, Saskatchewan and British Columbia unions recording somewhat heightened activity during March, and the remaining provinces slight employment declines. With the exception of Nova Scotia all provinces contributed to the downward employment movement were fractional only. The same unemployment level was maintained by both Saint John and Winnipeg unions as in March last year, while in all other cities curtailment of activity was noted, Edmonton unions particularly recording large employment recessions though in Regina and Vancouver also substantial reductions occurred.

It will be noticed from the chart which accompanies this article that the curve of unemployment during March pursued a course contrary to that of the preceding month, projecting slightly in a downward direction, indicative of some improvement in employment conditions during the month reviewed. In this movement it parallelled its course of the corresponding month last year though the level of the curve remained considerably above that shown in March a year ago.

Employment increases on a moderate scale were recorded in the manufacturing industries during March, the 497 unions from which reports were received, with an aggregate membership of 59,470 persons, showing 7·4 per cent of inactivity compared with 8·5 per cent in February. Though fluctuations occurred in the various trades, still the changes did not involve a particularly large number of members, garment workers and general labourers indicating the greatest improvement during March, followed by lesser gains among fur, leather and jewellery workers, printing tradesmen and bakers. On the other hand, conditions for pulp and paper makers were quieter than in February, and employment for iron and steel, and wood workers eased off slightly. That the percentage of idleness in the manufacturing industries showed a noteworthy increase over March last year, when 3·9 per cent of unemployment was recorded, may be attributed to a large extent to slackness in the iron and steel trades, especially in machine shops; while pulp and paper makers and general labourers also suffered substantial curtailment of activity, and the situation for textile and wood workers, printing tradesmen and cigar makers declined.

Due to a large extent, to mine shut downs in the province of Alberta, the coal mining situation at the close of March was less favourable than in the preceding month. Returns for March were tabulated from a total of 42 unions of coal miners, with 17,099 members, 1,641 of whom or a percentage of 9·6 were idle, compared with 5.7 per cent in the previous month. Contributing declines of much smaller degree than in Alberta, were reported from the British Columbia mines; while in Nova Scotia the same percentage of idleness was registered in both months under comparison. Unemployment in the Alberta mines was also a large factor in the increase in idleness shown over March last year, when 5·2 per cent of the members reported were without work, though in British Columbia also there was noteworthy employment curtailment. In Nova Scotia, however, the level of activity was slightly higher than in March last year. Part time work among coal miners was registered to a considerable extent during March.

Though depression in the building trades continued to be in evidence to a marked degree during March, still the level of activity showed a moderate advance over February conditions. This was indicated by the returns tabulated from a total of 223 unions of building tradesmen, covering 31,176 members, 9,496 of whom were idle at the end of March, a percentage of 30·5 compared with 34·0 per cent in February. The employment volume was, however, considerably reduced from March last year, when 17·9 per cent of idleness was registered in the building group as a whole. Carpenters and joiners and painters, decorators and paperhangers reported gains in employment over February, involving the greatest number of workers; though viewed from a percentage basis, the most pronounced expansion was reported by bridge and structural iron workers who, however, formed but a small proportion of the total membership reported in the building trades. Hod carriers and building labourers, electrical workers and granite and stone cutters were also somewhat better engaged. On the other hand, declines in available work were reported by bricklayers, masons and plasterers, plumbers and steamfitters, and tile layers, lathers and roofers. Employment for tile layers, lathers and roofers was more prevalent than in March a year ago, all other trades showing contractions in the volume of activity, those recorded by bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters, hod carriers and building labourers and bridge and structural iron workers being quite substantial. Important declines occurred also among electrical workers and painters, decorators and paperhangers while among granite and stone cutters the contractions indicated were small.

Slight improvement in employment conditions among transportation workers was shown at the end of March from the previous month, the 753 unions from which reports were received, representing a total of 72,902 members, indicating 7·5 per cent of inactivity compared with 8·1 per cent in February. Steam railway employees whose reports constituted over 80 per cent of the entire group membership reporting, were afforded a slightly greater volume of work than in February, and employment for navigation workers was also at a higher level. Nominal declines in employment, however, were registered by street and electric railway employees and teamsters and chauffeurs. Steam railway employees were almost entirely responsible for the rise in the percentage of unemployment in the transportation industries as a whole from 4·3 in March a year ago to its present level. Street and electric railway employees reported a fractional adverse change only, while a better situation prevailed for navigation workers and teamsters and chauffeurs.

From longshore workers whose returns are tabulated separately each month, 13 reports were received in March covering a membership of 7,099 persons, 996 of whom, or a percentage of 14·0, were idle at the end of the month, contrasted with 10.8 per cent of unemploy-

ment in February, and with 6.7 per cent in March last year.

Retail clerks reported a fully engaged situation during March as in February, while in March last year 5·5 per cent of unemployment was reported. Returns for the month reviewed were tabulated from 6 unions of these workers with 1,264 members.

From unions of civic employees 67 reports were received during March, embracing a membership of 8,182 persons, 158 (or a percentage of 1·9) of whom were without work at the end of the month, compared with 1·6 per cent in February and with 1·0 per cent in March last year.

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month.	N.S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Slight variation only from February conditions was reported by unions in the miscellaneous group of trades during March as indicated by the reports received from 121 unions, with an aggregate of 6,962 members. Of these 696 were idle at the close of the month, a percentage of 10·0, contrasted with 9·6 per cent of inactivity during February. Theatre and stage employees and stationary engineers and firemen reported some reduction in the unemployment volume from February, while among hotel and restaurant employees the change was very slight, the tendency, however, being favourable. A considerable drop in the amount of work afforded members in the unclassified division was reported in comparison with February, and among barbers, nominal declines only occurred. In making a comparison with the returns for March last year in the miscellaneous group of trades, when 5·1 per cent of the members reported were idle, hotel and restaurant and theatre and stage employees, stationary engineers and firmen and unclassified workers all registered contractions in activity during the month surveyed, while employment conditions for barbers remained practically unchanged.

Fishermen reported 1·8 per cent of unemployment among their members at the close of March, in contrast with 2·4 per cent in the previous month and 1·2 per cent in March, 1929. The percentage for March this year was based on the reports received from 4 unions of fishermen with 835 members.

The 5 unions of lumber workers and loggers from which reports were tabulated at the end of March, with a membership total of 1,185 persons, indicated 17·9 per cent of idleness, compared with 13·0 per cent at the end of February. Unemployment for these workers was, however, at a considerably higher level than in March last year when 2·8 per cent of inactivity was recorded.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for March each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table II summarizes the turns in the various groups of industries for the same months as in Table I.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month.	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile and carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals.	Clay, glass and stone products.	Mineral products.	Miscellaneous manufacturing industries.	Building and construction.	Transportation.	Shipping and stevedoring.	Steam railway operation.	Local transportation.	Communication.	Telegraph operation.	Telephone operation.	Trade (retail shop clerks).	Services.	Governmental.	Miscellaneous.	All occupations.

(3) Employment Office Reports for March, 1930

The volume of business transacted by the officers of the Employment Service of Canada during the month of March, 1930, showed a decrease of 3 per cent in the average daily placements from the preceding period, and also a decline of 11 per cent when a comparison was made with the average daily placements effected during the corresponding period of 1929. The total placements for the entire month under review were slightly higher, however, than in the previous month due to more than offset by heavy declines in farming, manufacturing and services and by lesser declines in all remaining groups.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

the fact that there were two more working days in March than in February. Gains over last month were recorded in all groups, except logging, where there was a decline of nearly 60 per cent, while farming, on the other hand, showed an increase of 75 per cent, followed by lesser, though fairly substantial gains, in services, construction and maintenance and manufacturing, minor increases only being shown in the remaining groups. In camparison with March last year, the only group to show a gain was construction and maintenance, where placements nearly doubled, due to continued activity in the highway division, as relief work was still being provided by the different municipalities or provinces, but this gain was to applications showed fluctuations of less than one per cent during the month, but at the end of the period were considerably below those recorded at the close of March, 1929, the curve of vacancies being nearly 14 points and that of placements almost 11 points below the levels attained in the latter part of March a year ago. The ratio of vacancies to each 100 applications was 63.5 during the first half and 64.0 during the second half of March, 1930, in contrast with the ratios of 71.5 and 77.8 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 60.3 and 59.4 as compared with 64.8 and 70.2 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during March, 1930, was 948 as compared with a daily average of 1,108 during the corresponding month a year ago and with 966 recorded daily in February, 1930.

The average number of applications for employment received daily by the offices of the Service during the month under review was 1,488 in comparison with 1,485 in March, 1929. Applications for work during the preceding month of 1930 averaged 1,510 daily.

The average number of placements made daily by the offices of the Service during March, 1930, was 892, of which 419 were in regular employment and 473 in work of one week's duration or less, as compared with a total daily average of 920 during the preceding month. Placements in March a year ago averaged 1,002 daily, being 631 in regular and 371 in casual employment.

During the month of March, 1930, the offices of the Service referred 24,492 persons to vacancies and effected a total of 23,168 placements. Of these the placements in regular employment were 10 881, of which 7,287 were for men and 3,594 for women, while placements in casual work totalled 12,287. The number of vacancies reported by employers was 16,193 for men and 8,454 for women, a total of 24,647, while applications for work numbered 38,686, of which 27,394 were from men and 11,292 from women.

The following table gives the placements recorded by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (3 months)	37,196	33,974	71,170

NOVA SCOTIA

During March orders received at employment offices in Nova Scotia called for over 18 per cent fewer workers than in the preceding month, but over 9 per cent more than during the corresponding month last year. There was a decline of over 18 per cent in placements when compared with February but a gain of over 13 per cent in comparison with March 1929. The gain in placements over March last year was due to increases in the services group although trade, mining, manufacturing and farming showed slight improvement. Of the declines, transportation, logging and construction and maintenance were the most noteworthy. Industrial groups in which most of the placements effected during the month were: manufacturing, 51; construction and maintenance, 27; trade, 56; and services, 417, of which 343 were of household workers. Placements in regular employment numbered 66 of men and 79 of women.

NEW BRUNSWICK

Orders listed at employment offices in New Brunswick during March called for nearly 6 per cent more workers than in the preceding month, and nearly 2 per cent more than during the corresponding month last year. There was a gain also in placements of over 3 per cent when compared with February, but a decline of less than 1 per cent in comparison with March, 1929. More placements were made in manufacturing and services than in March last year, but those gains were slightly more than offset by declines in construction and maintenance and transportation. The changes in other groups were nominal only. Placements by industrial groups included: manufacturing, 46; construction and maintenance, 28; trade, 28; and services, 501, of which 407 were of household workers. There were 49 men and 62 women placed in regular employment during the month.

QUEBEC

Opportunities for employment as indicated by orders received at employment offices in the province of Quebec during March were over 35 per cent better than in the preceding month, but over 28 per cent less plentiful than in the corresponding month last year. There was a gain of nearly 6 per cent in placements when compared with February, but a decline of over 39 per cent in comparison with March, 1929. All groups except mining, where a small gain was recorded, participated in the declines in placements from March last year, those in the building division of construction and maintenance representing nearly 60 per cent of the decrease. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 120; logging, 113; construction and maintenance, 207; trade, 34; and services, 502, of which 416 were of household workers. During the month 465 men and 428 women were placed in regular employment.

Ontario

There was an increase of 12 per cent in the number of positions offered through employment offices during March when compared with the preceding month, but a decline of nearly 1 per cent in comparison with the corresponding month last year. Placements were over 16 per cent higher than in February, and nearly 6 per cent in excess of March, 1929. Road and sewer construction undertaken by certain municipalities as relief work was responsible for the gain in placements over March last year, as, with the exception of a nominal increase in the placement of mine workers, construction and maintenance was the only group to show any gain. The largest decrease in placements was recorded under manufacturing, although there were considerable reductions also under logging, transportation, services and trade. Placements by industrial divisions included; manufacturing, 1,104; logging, 698; farming, 570; mining, 84; transportation, 145; construction and maintenance, 4,634; trade, 470; and services, 3,372, of which 1,976 were of household workers. There were 3,376 men and 1,306 women placed in regular employment during the month.

Manitoba

Employment opportunities as indicated by orders listed at offices in Manitoba during March were over 10 per cent less favourable than in the preceding month, and over 26 per cent fewer than during the corresponding month last year. There was a decrease also in placements of over 18 per cent when compared with February, and of over 24 per cent in comparison with March, 1929. Logging was the only group in which more placements were made during the month under review than in March of last year. The largest declines were in farming and services. Industrial groups in which most of the placements were effected during the month included: manufacturing, 70; logging, 109; farming, 526; construction and maintenance, 103; trade, 123; and services, 1,380, of which 1,139 were of household workers. Regular placements numbered 680 of men and 554 of women.

Saskatchewan

During the month of March there were over 15 per cent more positions offered through employment offices in Saskatchewan than in the preceding month, but over 43 per cent less than during the corresponding month last year. Placements increased nearly 9 per cent over February, but were nearly 40 per cent less than in March, 1929. All industrial groups participated in the reductions in placements from March last year, but decreased farm placements accounted for over 60 per cent of the total loss. Services also show a substantial decrease. Placements by industrial divisions included: manufacturing, 48; farming, 466; transportation, 32; construction and maintenance, 351; trade, 86; and services, 775, of which 531 were of household workers. There were 505 men and 458 women placed in regular employment during the month.

Alberta

There was a decrease of over 13 per cent in the number of positions offered through employment offices in Alberta during March when compared with the preceding month, but a gain of nearly 9 per cent when compared with the corresponding month last year. Placements were nearly 14 per cent lower than in February, but were over 14 per cent higher than in March, 1929. The gain in placements over March last year was attributable to highway construction undertaken in relief of unemployment, although there were increased placements also in the services group. Of the declines in all other divisions those in farming were the most noteworthy. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 139; logging, 99; farming, 607; construction and maintenance, 1,378; trade, 92; and services, 914, of which 642 were of household workers. During the month 1,178 men and 390 women were placed in regular employment.

British Columbia

The demand for workers as indicated by orders received at employment offices in British Columbia during March was nearly 24 per cent higher than in the preceding month, but nearly 17 per cent less than in the corresponding month last year. There was an increase of over 25 per cent in placements when compared with February, but a decline of 16 per cent in comparison with March, 1929. Construction and maintenance was the only group in which more placements were made during the month under review than in March last year. Of the declines under this comparison manufacturing was the largest, although substantial reductions were also recorded in farming, mining, transportation, services and trade. Placements by industrial divisions included: manufacturing, 250; logging, 216; farming, 210; transportation, 87; construction and maintenance, 615; trade, 91; and services,

939, of which 543 were of household workers. Regular employment was found for 968 men and 317 women during the month.

Movement of Labour

During the month of March, 1930, the Offices of the Employment Service of Canada made 10,881 placements in regular employment of which 5,382 were of persons for whom the employment located was outside the immediate territory of the offices at which they were registered. Of the latter, 740 were granted the Employment Service Reduced Transportation Rate, 577 going to points within the same province as the dispatching office and 163 to other provinces. The Reduced Transportation Rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec one person only took advantage of the special reduced rate during March, a machinist, who travelled from Hull to a point within the Sudbury zone.

Transfers at the Special Reduced Rate from Ontario centres during March totalled 137 of which 126 were to provincial points and the remainder to centres outside. Included in the provincial movement were 90 bush workers, the majority of whom went to camps in the Fort William, Port Arthur and Sudbury zones and who received their certificates for the most part at these zone offices. From Toronto, 18 Hydro construction labourers travelled to Ottawa and one blacksmith to Kingston, while from Timmins three mine workers were sent to employment within its own zone. In addition the Timmins zone received three mine workers from Cobalt and Port Arthur one electric hoistman from the same centre. To the Sudbury zone Hamilton and Ottawa each dispatched one lead burner. Of the remaining provincial certificates 7 were issued to carpenters going from Port Arthur to Kingston and one to a millwright proceeding from Pembroke to Cobalt. The interprovincal movement comprised the transfer of 11 workers, 6 of whom were carpenters dispatched from North Bay to Rouyn and 5 shaft miners shipped from Sudbury to employment within the Winnipeg zone.

The movement of labour both within and from the province of Manitoba during March originated at Winnipeg and included the transfer of 292 workers, 166 of whom went to centres within the province and 126 to points in other provinces. Provincially the Brandon zone received 13 farm domestics and 2 hotel employees from Winnipeg, and Dauphin 9 hotel employees, one baker, one farm general, one laundress and one domestic, while to various points within the Winnipeg zone were dispatched 124 farm hands, 6 farm domestics, 5 bushmen, one electrician, one steamfitter and one mucker. Of the workers going outside the province the Port Arthur zone was the destination of 33 bush workers, 3 hotel employees and 2 domestics. To the Estevan zone 2 hotel employees were shipped from Winnipeg and the balance of the interprovincial movement was of farm labour, 74 farm hands and 12 farm household workers going to various agricultural centres throughout the province of Saskatchewan.

At Saskatchewan offices 62 persons were granted certificates for reduced transportation during March, 61 of whom went to employment within the province. Of these 56 were destined to agricultural districts throughout the province, 46 of whom were farm hands and 10 farm household workers. The transfer of these workers was effected largely by the Regina and Saskatoon offices. From Regina, also, one blacksmith proceeded to Weyburn and one butcher to Swift Current and from Saskatoon one bush worker and one blacksmith went to Prince Albert. Securing a certificate at the Moose Jaw office one hotel employee travelled to Regina. The one person going outside the province was a structural iron worker who was conveyed from Regina to employment in the Dauphin zone.

Alberta offices issued 174 certificates for reduced transportation during March, 155 provincial and 19 interprovincial. Of the latter 18 were granted to farm hands travelling from Edmonton to employment at various points in Saskatchewan, the one remaining being a farm housekeeper who was transported from Calgary to the Saskatoon zone. Within the province, the Edmonton office was instrumental in the transfer of 5 farm hands to Drumheller, one labourer and one maid to Calgary 2 farm hands to Medicine Hat, one farm hand to Lethbridge and of 56 bush workers, 27 farm hands, 5 farm housekeepers, 10 sawmill workers, 9 labourers, 5 hotel employees and 3 mine engineers to centres within its own zone. The balance of the provincial movement was from Calgary which office dispatched 5 farm hands and 2 farm housekeepers to Drumheller, 5 farm hands, 2 farm domestics and one welder to Lethbridge, 4 labourers to Edmonton and 10 farm hands and one farm housekeeper within the Calgary zone.

Workers who benefited by the Employment Service Reduced Transportation Rate in British Columbia during March were 74 in number, 69 of whom went to employment within the province and 5 to points outside. The latter were transferred from New Westminster and included 3 farm hands going to Calgary and one farm hand each to the Moose Jaw and Dauphin zones. A large share of the provincial transfers were from Vancouver which office dispatched 21 station men and one domestic to Nelson, 2 miners, 2 farm hands, 2 sawmill workers and one domestic to Penticton, 2 farm hands, one farm cook, 2 hotel employees and one miner to Kamloops, 2 flunkeys, one cook and one farm hand to Revelstoke, 2 farm hands to Prince George and 9 bush workers, 3 carpenters, one construction superintendent, one flunkey, one cook, one truck driver and one electric hoist operator to employment within the Vancouver zone. In addition, Nelson transferred 7 bushmen, Prince George 2 cooks and one engineer, and Prince Albert one machine miner to centres within their respective zones.

Of the 740 workers who took advantage of the Employment Service Reduced Transportation Rate during March 319 were carried by the Canadian National Railways, 392 by the Canadian Pacific Railway, 17 by the Temiskaming and Northern Ontario Railway and 12 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada during March, 1930

According to returns tabulated by the Dominion Bureau of Statistics, the value of the building permits issued by 61 cities during March was $13,352,640; this was an increase of $4,524,770 or 51.3 per cent over the February total of $8,827,870 but a decrease of $10,715,378 or 44.5 per cent, as compared with the aggregate of $24,068,018 reported for the same month in 1929. Last year's total was the highest for March since this record was commenced in 1920. Building costs, as shown by the Bureau's index numbers of wholesale prices of building materials, showed a slight increase over the same period for 1929.

Some 50 cities furnished detailed statistics, showing that they had granted nearly 1,000 permits for dwellings valued at about $4,000,000 and some 1,900 permits for other buildings estimated to cost approximately $9,000,000. In February, authority was given for the erection of some 600 dwellings and nearly 1,100 other

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES.

buildings, estimated at approximately $2,000,000 and $6 000,000 respectively.

All provinces except New Brunswick and Manitoba roported increases in the building authorized during March as compared with the preceding month. The greatest gain was that of $1,170,642 in Alberta.

As compared with March, 1929, British Columbia was the only province to record an advance, where there was a gain of $1,097,069 or 75.9 per cent. There were decreases in every other province, the greatest decline of $8,740,994 or 76.8 per cent being in Quebec.

Of the larger cities, Montreal registered a gain as compared with the preceding month, but a loss as compared with March last year, while Toronto showed a decrease in both cases. In Winnipeg, there was a loss in the former, as well as in the latter comparison, while Vancouver showed gains in both comparisons.

Of the smaller centres, New Glasgow, Moncton, Quebec, Shawinigan Falls, Three Rivers, Westmount, Belleville, Brantford, Hamilton, Niagara Falls, Ottawa, Peterborough, St. Catharines, Sarnia, East Windsor, Brandon, Moose Jaw, Edmonton, Lethbridge and Victoria reported higher totals than in either February, 1930 or March, 1929.

Cumulative Record for First Quarter, 1930. The following table gives the value of the building authorized by 61 cities during March, and in the first quarter of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first quarter of the same years are also given (1926=100).

Year.	Value of permits issued in March	Value of permits issued in first quarter	Indexes of value of permits issued in first quarter (1920=100)	Average indexes of wholesale prices of building materials in first quarter (1926=100)
	$	$

1923.....	9,658,950	19,478,119	103·0	110·6
1922.....	10,615,531	18,680,173	98·8	108·0
1921.....	7,290,589	13,569,512	71·8	135·7
1920.....	8,736,675	18,909,986	100·0	139·4

The aggregate value of the building permits issued in the first quarter of 1930 was thus considerably less than in the corresponding periods of 1929 or 1928. It was, however, substantially larger than in the first quarters of any of the years from 1920-1927.

The table on page..gives the value of the building permits issued by 61 cities in February and March, 1930, and March, 1929. The 35 cities for which records are available since 1910 are indicated by asterisks.

Wage Standards in Europe

Some time ago the Governing Body of the International Labour Office accepted an offer of financial assistance from the Twentieth Century Fund of the United States for the carrying out of an enquiry into wages in Europe. The object of the enquiry was to obtain for the Ford Motor Company information which would enable it to fix the wages of the workers in its European factories at such a level that they would represent a standard of living equal to that of its workers in Detroit. It was therefore necessary, as a preliminary step, to ascertain as precisely as possible what was the standard of living obtainable by a Detroit worker at his present minimum wage. This initial stage of the enquiry is now approaching completion. On receipt of the data, the International Labour Office will compile the required information relating to some seventeen towns in different countries of Europe.

Sir Percival Perry, chairman of the Ford Motor Company in Europe in a recent speech made in London on the relation of wages to output and labour costs in the company's European factories, referred to the company's policy of establishing equivalence of real wages and conditions of employment throughout the Ford undertakings in Europe, and to the system of so-called "minute costs" on which comparison of results is based; made the following observations.—"This company and its associated companies," he said, "are employing Englishmen, Irishmen, Dutchmen, Frenchmen, Belgians, Danes, Germans, Italians, Spaniards, Swedes, Finns and Turks, all working in their respective countries, and doing the same job with similar tools under equal factory conditions. . . . Comparative statistics have enabled us to establish the fact that the American workman is no miracle monger; neither is the British, Irish or continental artisan any inferior creature. Given like conditions and treatment, our workers here in Europe actually beat their American cousins, as proved by the standard of our minute costs."

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1930

BUSINESS transacted by the offices of the Employment Service of Canada during the quarter January to March, 1930, showed a slight improvement over that effected during the corresponding quarter of 1929, as there was an increase of one percent in the vacancies offered, and of nearly 5 per cent in the placements effected in regular and casual employment. All groups, except logging, and construction and maintenance, registered declines in both instances, the heaviest losses occurring in manufacturing, farming and services, but in the highway division alone of construction and maintenance, where municipal or provincial relief work had been provided, the gain more than offset all other declines. Nova Scotia, New Brunswick and Alberta showed gains in vacancies and placements, those in Alberta being the most noteworthy, due, as mentioned above, to continued relief work offered in highway construction and maintenance. Ontario recorded a decline in vacancies, but a gain in placements. All remaining provinces showed fewer transactions under both comparisons. The accompanying table gives the vacancies and placements in the Employment Service of Canada by industrial groups in the various provinces during the period January to March 1930.

From the chart on page 562, which accompanies the article on the work of the employment offices for the month of March, it will be seen that the curve of vacancies and placements in relation to applications showed slight variation throughout the quarter, with the exception of the early part of January, when a sharp decline in both instances was registered. From that time until the close of February, the curve of vacancies showed a slight upward tendency, dropping slightly during the first half of March and again rising during the latter part of the month. The curve of placements also showed little change from the middle of January to the end of the quarter, having for the most part an upward trend, though a decline of two points and one point, respectively, was registered during the latter half of February and of March. During the period January to March, 1930, there was a ratio of 63.3 vacancies and 60.0 placements for each 100 applications for employment, as compared with 69.4 vacancies and 63.4 placements during the corresponding period a year ago. The average number of positions offered daily during the quarter under review was 990, of applications registered, 1,562, and of placements effected, 937, in contrast with the daily average of 993 vacancies, 1,432 applications and 908 placements in regular and casual employment during the first quarter of 1929.

During the three months January to March, 1930, the offices of the Service reported that they had made 74,942 references of persons to positions and had effected a total of 71,170 placements, of which 37,196 were in regular employment and 33,974 in casual work. Of the placements in regular employment, 27,030 were of men, and 10,166 of women, while casual work was found for 23,610 men and 10,364 women. A comparison with the same period of 1929 shows that 68,028 placements were then made, of which 41,253 were in regular employment and 26,775 in casual work. Applications for employment during the period under review were received from 84,701 men and 33,998 women, a total of 118,699, in contrast with the registration of 107,364 during the same period in 1929. Employers notified the service during the first quarter of 1930 of 75,187 positions, of which 51,688 were for men and 23,499 for women, as compared with 74,459 opportunities for work offered during the corresponding period in 1929.

In another section of this issue will be found a report in detail of the transactions of employment offices for the month of March 1930.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Detailed reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during March is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for April, 1930, and previous months are reproduced below.

Great Britain

There was a further decline in employment during March in a number of industries, including coal mining, pottery and glass manufacture, iron and steel and other metal industries, engineering, shipbuilding and ship-repairing, the textile trades (particularly cotton, silk and artificial silk, and jute) and dock and harbour services. There was a seasonal improvement, however, in the building industry, and in the tailoring and dressmaking trades.

Among the workpeople numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at March 24, 1930 (including these temporarily stopped as well as those wholly unemployed) was 14·0 as compared with 13·1 at February 24, 1930, and with 10·0 at March 25, 1929. The percentage wholly unemployed at March 24, 1930, was 10·6, as compared with 10·0 at February 24, 1930; while the percentage temporarily stopped was 3·4 as compared with 3·1. For males alone the percentage at March 24, 1930, was 14·5, and for females, 12·8; at February 24, 1930, the corresponding percentages were 13·8 and 11·2. The total number of applicants for employment registered at Employment Exchanges in Great Britain and Northern Ireland at March 31, 1930, was approximately 1,731,000. of whom 1,238,000 were men, and 410,000 were women, the remainder being boys and girls. At February 24, 1930, it was 1,582,000, of whom 1,160,000 were men and 338,000 were women; and at March 25, 1929, it was 1,168,000, of whom 918,000 were men and 190,000 were women.

It is pointed out that of the total increase during March in the number of workers registered as unemployed, a substantial part was due to the operation of the Unemployment Insurance Act, 1930, and not to a real increase in unemployment.

United States

Employment in the United States decreased 1 per cent in March, 1930, as compared with February, 1930, and pay-roll totals decreased 1·2 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of December, 1929, and January, 1930, and therefore cannot be included in the general statement for the month of March. The number of employees of Class I railroads as at January 15 totalled 1,544,060, representing a decrease of 2·8 per cent since December 15, 1929. The amount of pay-roll in the entire month of January was $225,203,298, representing a decrease over the previous month of 0·4 per cent.

Employment in manufacturing industries decreased 0·6 per cent in March as compared with February, and pay-roll totals increased 0·1 per cent.

The per cents of change in manufacturing industries in March in employment and in pay-roll totals are based upon returns made by 12,748 establishments in 54 of the principal manufacturing industries of the United States. These establishments in March, 1930, had 3,243,184 employees whose combined earnings in one week were $87,483,765.

The bureau's weighted index of employment in March, 1930, is 89·8, as compared with 90·3 for February, 1930; 90·2 for January, 1930, and 98·6 for March, 1929; the index of pay-roll totals for March, 1930, is 90·8, as compared with 90·7 for February, 1930; 87·6 for January, 1930, and 103·9 for March, 1929. The monthly average for 1926 equals 100.

Four of the 12 groups of industries had more employees in March than in February—lumber, chemicals, stone-clay-glass, and tobacco—and the paper and vehicle groups, as well as these four, all reported increased pay-roll totals. The greatest gains in employment were in the stone-clay-glass and the chemicals groups, and the greatest loss in employment was in the food group.

Eighteen of the 54 separate industries reported employment gains in March—among them being such seasonal changes as 39·9 per cent in fertilizers, 8·2 per cent in cement, 6·6 per cent in brick, 6·3 per cent in women's clothing, 4·6 per cent in millinery, 4·4 per cent in cane-sugar refining, 4·2 per cent in ice cream, 3·9 per cent in cast-iron pipe, 1·6 per cent in sawmills, and 1·4 per cent in automobiles. Small increases were reported also in silk goods, newspaper printing, glass, stamped ware, cigars, carriages and wagons, agricultural implements, and tires.

The outstanding decreases in employment in March were 7 per cent in woollen goods, 2·6 per cent in hosiery and knit goods, 3·2 per cent in men's clothing, 4·8 per cent in slaughtering, 2·5 per cent in steam-railroad car shops, 1·9 per cent in petroleum refining, 1·1 per cent each in cotton goods and structural ironwork, 1 per cent in boots and shoes, 0·9 per cent in foundry and machine-shop products, and one-half of 1 per cent in the iron and steel industry.

Twenty-six industries reported increases in pay-roll totals in March, 9 of them—flour, finishing textiles, paper boxes, book and job printing, chemicals, stoves, electric car shops, shipbuilding, and electrical machinery—being industries which showed small decreases in employment.

Three industries—aircraft, jewelry, and paint and varnish—this month have been added to the bureau's employment survey, but like rayon and radio they are not yet included in the bureau's indexes. The rayon and aircraft industries both reported increased employment in March as compared with February, while radio, jewelry, and paint reported decreased employment, the only employment change of magnitude, however, having been the decrease of 20·8 per cent in radio concerns.

Increased employment in March was shown in the Pacific (1·4 per cent) and South Atlantic (0·6 per cent) geographic divisions, while each of the seven remaining divisions reported fewer employees in March than in February, the percentage decreases ranging from 2·7 in the East South Central division to less than one-tenth of 1 per cent in the Middle Atlantic division. Pay-roll totals, however, were higher in March than in February in six divisions; the three divisions which showed decreased pay-roll totals were the New England, East North Central, and East South Central divisions.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 20 per cent.

Development of Aviation in Canada

The monthly review entitled *Agricultural and Industrial Progress in Canada,* published by the Canadian Pacific Railway Company gives in its issue for May an account of the development of aviation in Canada from its commencement in 1905 down to the present day. Describing the rapid progress that has been made in the last three years, the writer states that to-day Canada is leading the world in forestry protection, aerial survey and exploration work. The statistics of 1927-1928 and 1929 show that a rapid expansion is under way. The approximately 6,000,000 miles flown by aircraft during the year 1929 compares with 2,728,414 in 1928. Freight carried totalled 3,700,000 pounds as compared with 2,404,682 pounds in 1928, and 1,098,346 pounds in 1927. Flying hours totalled 78,000 as compared with 43,071 in 1928.

During the year 1929, 797,564 pounds of mail were carried, of which 430,636 was contract mail. In 1928 mail carried totalled 316,631 pounds, and in 1927 it was 146,843 pounds. Commercial companies operating in Canada in 1929 numbered 95, compared with 53 in 1928 and 20 in 1927.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work

is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above mentioned:—

Department of Marine and Fisheries

Contracts in Group "A" (Construction, etc.)

Construction of a steel hopper barge. Name of contractors, The Davie Shipbuilding & Repairing Co., Ltd., Lauzon, Levis P. Q. Date of contract, Sept. 21, 1929. Amount of contract, $224,900.00. The General Fair Wages Clause was inserted in the contract.

Construction of 8 reinforced concrete piers (No. 5 Light), St. Clair River, Ont. Name of contractors, Reedy & Cain, Lambton, Ont. Date of contract, March 26, 1930. Amount of contract, $2,520.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Concrete workers	$0 40	10
Carpenters	0 75	10
Pile drivers	0 75	10
Blacksmiths	0 65	10
Plumbers	0 75	10
Painters	0 65	10
Labourers	0 40	10

P.S. The rate for carpenters to apply to all crib work, form work, and other wood work.

Overtime to be paid for all hours worked beyond the above specified, according to the custom prevailing for the various classes involved.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Installation of a heating system at the Naval Service Dockyard, Halifax, N. S. Name of contractors, Powers Bros., Lunenburg, N.S. Date of contract, February 24, 1930. Amount of contract, $13,450.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per week
Plumbers and steamfitters	$0 85	44
Electricians	0 80	44
Labourers—skilled	0 45	54
Labourers—unskilled	0 40	54

Construction of a new roof for Armoury of the Grenadier Guards, Montreal, P. Q. Name of contractors, Turcot Ltd., Montreal, P. Q. Date of contract, October 31, 1929. Amount of contract, $2,500.00. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of improvements to protection walls at Montmagny, P. Q. Name of contractor, Philippe Tetu, Montreal, P. Q. Date of contract, December 14, 1929. Amount of contract, $15,760.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Foreman	$0 50	10
Carpenters	0 30	10
Blacksmiths	0 35	10
Blacksmiths' helpers	0 25	10
Labourers	0 20	10
Carters (single)	0 35	10
Teamsters	0 45	10

Construction of wharf repairs at Montmagny, P. Q. Name of contractors, J. Beaumont & P. Tetu, Montmagny, P.Q. Date of contract, December 15, 1929. Amount of contract, $5,095.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages. Not less than	Hours of labour. Not more than
	per day	per hour
Foreman	$0 50	10
Carpenters	0 30	10
Blacksmiths	0 35	10
Blacksmiths' helpers	0 25	10
Labourers	0 20	10
Carters (single)	0 35	10
Teamsters	0 45	10

Repairs to harbour works at Saugeen River (Southampton), Ont. Name of contractor, G. L. Campbell, Midland, Ont. Date of contract, Nov. 4, 1929. Amount of contract, $34,390.60. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Carpenters	$0 70	10
Blacksmiths	0 50	10
Steam hoist engineers	0 75	10
Labourers	0 35	10

Time and one-half to be paid for all work performed beyond the hours specified above.

Demolition of buildings on Government property at Prescott, Ont. Name of contractors, Curran & Briggs, Ltd., Toronto, Ont. Date of contract, Sept. 24, 1929. Amount of contract, $382.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Labourers	$0 40	9 to 10
Wreckers	0 40	9 to 10
	Per day	
Carters, horse and cart	5 00	10
Teamsters, team and wagon	7 00	10

Grading of railway yards and furnishing and placing track ties at Prescott, Ont. Name of contractors, T. C. Gorman Construction Co., Montreal, P. Q. Date of contract, March 27, 1930. Amount of contract, $85,345.67. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Labourers	$0 40	9 to 10
	Per day	
Teamsters with team and wagon	7 00	9 to 10
Carters with horse and cart	5 00	9 to 10
	Per hour	
Rock drillers	0 50	10
Powdermen	0 60	10
Steam shovel operators	1 20	10
Steam shovel firemen	0 72	10
Cranemen	0 96	10
Motor truck and driver	2 50	9 to 10
Motor truck driver	0 50	9 to 10
Track labourers	0 40	9 to 10

Construction of a boiler house for the Mines Department, Ottawa, Ont. Name of contractor, G. A. Crane, Ottawa, Ont. Date of contract, Sept. 3, 1929. Amount of contract, $3,975.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Labourers	$0 45	8–10
Concrete workers	0 45	8–10
Bricklayers	1 25	8
Carpenters	0 90	8
Painters	0 70	8
Electricians	0 80	8

Construction of Immigration Hall at Edmonton, Alta. Name of contractor, John Dunlop, Edmonton, Alta. Date of contract, March 21, 1931. Amount of contract, $77,480.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Bricklayers	$1 45	8
Terra cotta layers	1 45	8
Stonemasons	1 45	8
Plasterers	1 45	8
Plasterers' helpers	0 60	8
Marble and tile setters	1 45	8
Plumbers and steamfitters	1 15	8
Plumbers' and steamfitters' helpers	0 60	8
Sheet metal workers	1 10	8
Sheet metal workers' helpers	0 75	8
Carpenters and joiners	1 00	8
Concrete finishers	1 00	8
Stone cutters	1 00	8
Structural steel workers	1 00	8
Terrazzo layers	1 00	8
Terrazzo layers' helpers	0 60	8
Electricians	1 00	8
Electricians' helpers	0 60	8
Steam hoist engineers	0 92½	8
Painters and glaziers	0 95	8
Felt and gravel roofers	0 80	8
Gasoline hoist engineers	0 75	8
Concrete mixers	0 50	8–10
Concrete layers	0 50	8–10
Motor truck drivers	0 50	8–10
Common labourers	0 45	8–10
Teamsters with team and wagon	0 95	8–10

Construction of an X-Ray vault at Christie Street Hospital, Toronto, Ont. Name of contractors, F. C. Bell & Co., Toronto, Ont. Date of contract, December 2, 1929. Amount of contract, $3,244.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Driver—Team and wagon	$1 10	10
Truck driver	0 50	10
Labourers (common)	0 50	10
Labourers (building)	0 60	10
Concrete workers	0 50	10
Concrete finishers	0 75	8
Bricklayers and masons	1 30	8
		per week
Plasterers	1 32½	40
		per day
Carpenters and joiners	1 00	8
Sheet metal workers	1 07½	8
Roofers (felt and gravel)	0 65	9

NOTE.—All the above trades to be paid overtime when working beyond the hours above noted, according to the working conditions in the district.

Grading of Grain Terminal Yards and furnishing and placing track ties at Prescott, Ont. Name of contractors, T. C. Gorman Construction Co., Ltd., Montreal, P. Q. Date of contract, March 27, 1930. Amount of contract, approximately $85,345.67. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Labourers	$0 40	9 to 10
	Per day	
Teamsters with team and wagon	7 00	9 to 10
Carters with horse and cart	5 00	9 to 10
	Per hour	
Rock drillers	0 50	10
Powdermen	0 60	10
Steam shovel operators	1 20	10
Steam shovel firemen	72	10
Cranemen	0 96	10
Motor truck and driver	2 50	9 to 10
Motor truck driver	0 50	9 to 10
Track labourers	0 40	9 to 10

Alterations and additions to electric wiring and fittings of Public Building, Winnipeg, Man. Name of contractors, Schumacher, MacKenzie, Ltd., Winnipeg, Man. Date of contract, March 7, 1930. Amount of contract, $3,100.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than	
	Per hour	Per day	Per week
Electricians	$1 10	8	44

Construction of a public building at Sherbrooke, N. S. Name of contractor, Wm. E. Landry, Antigonish, N. S. Date of contract, March 31, 1930. Amount of contract, $24,780.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour.	Rates of wages. Not less than	Hours of labour. Not more than	
	Per hour	P day	Per week
Brick and hollow tile layers	$1 00	8	44
Stonemasons	1 00	8	44
Plasterers	1 00	8	44
Plasterers' helpers	0 40	9	54
Marble setters	1 00	8	44
Plumbers and steamfitters	0 85	8	44
Plumbers and steamfitters' helpers	0 45	8	44
Sheet metal workers	0 85	8	44
Sheet metal workers' helpers	0 45	8	44
Carpenters and joiners	0 73	8	44
Concrete mixers	0 35	9	54
Concrete floaters	0 45	9	54
Concrete finishers	0 60	9	54
Electricians	0 80	8	44
Electricians' helpers	0 45	8	44
Metal lathers	0 73	8	44
Structural steel workers	0 75	8	44
Terrazzo layers	1 00	8	44
Terrazzo layers' helpers	0 40	9	54
Painters and glaziers	0 73	8	44
Felt and gravel roofers	0 60	8	44
Ornamental iron workers	0 60	8	44
Common labourers	0 30	9	54
	Per day		
Drivers, one horse and cart	4 50	9	54
Drivers, two horses and wagon	7 00	9	54

Reconstruction of west pier breakwater, Port Maitland, Ont. Name of contractors, Cameron & Phin, Welland, Ont. Date of contract, Sept. 18, 1929. Amount of contract, $99,211.12. The General Fair Wages Clause was inserted in the contract.

Construction of revetment wall, Owen Sound, Ont. Name of contractor, G. L. Campbell, Midland, Ont. Date of contract, March 22, 1930. Amount of contract, $46,665.52. The General Fair Wages Clause was inserted in the contract.

Construction of embankment approach to International Bridge between Clair, N. B., and Fort Kent, Maine. Name of contractor, Ashley A. Colter, Fredericton, N.B. Date of contract, March 24, 1930. Amount of contract, $7,202.00 The General Fair Wages Clause was inserted in the contract.

Reconstruction of Esplanade wharf at Cobourg, Ont. Name of contractors, Russell Construction Co., Toronto, Ont. Date of contract, April 9, 1930. Amount of contract, $109,431.00. The General Fair Wages Clause was inserted in the contract.

Construction of a covered driveway, Customs and Immigration Building, Stanhope, P.Q. Name of contractor, Alberic Belisle, Coaticook, P.Q. Date of contract, July 25, 1929. Amount of contract, $1,056.00. The General Fair Wages Clause was inserted in the contract.

Construction of an enclosed porch to Public Building, Actonvale, Que. Name of contractor, Omer Dumont, Actonvale, P.Q. Date of contract, August 17, 1929. Amount of contract, $1,375.00. The General Fair Wages Clause was inserted in the contract.

Construction of new mezzanine floor, Post Office, Charlottetown, P. E. I. Name of contractor, H. J. Phillips, Charlottetown, P. E. I. Date of contract, November 30, 1929. Amount of contract, $2,085.00. The General Fair Wages Clause was inserted in the contract.

Interior alterations and additions to Public Building, Sudbury, Ont. Name of contractor, L. Lacasse of Sudbury, Ont. Date of contract, February 28, 1930. Amount of contract, $2,750.00. The General Fair Wages Clause was inserted in the contract.

Construction of the National Research Building, Ottawa, Ont. Name of contractors, Robertson & Janin of Ontario, Ltd., Toronto, Ont. Date of contract, February 15, 1930. Amount of contract, $2,777.400. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Beauharnois, Que. Name of contractors, Ed. Brunet & Son, Ottawa, Ont. Date of contract, March 31, 1930. Amount of contract, $40,500.00 and unit prices. The General Fair Wages Clause was inserted in the contract.

Construction of wharf repairs at Bagotville, P.Q. Name of contractor, J. Harry Tremblay, Port Alfred, Que. Date of contract, April 7, 1930. Amount of contract, $13,000.00. The General Fair Wages Clause was inserted in the contract.

Construction of an embankment approach to the International Bridge between Clair, N.B., and Fort Kent, Me. Name of contractor, Ashley A. Colter, Fredericton, N.B. Date of contract, March 24, 1930. Amount of contract, approximately $7,202.00. The General Fair Wages Clause was inserted in the contract.

Reconstruction of the Esplanade Wharf, Cobourg, Ont. Name of contractors, Russell Construction Co., Ltd., Toronto, Ont. Date of contract, April 28, 1930. Amount of contract, approximately $109,431.40. The General Fair Wages Clause was inserted in the contract.

Construction of National Research Laboratories, Ottawa, Ont. Name of contractors, Robertson & Janin of Ontario, Ltd., Toronto, Ont. Date of contract, April 7, 1930. Amount

of contract, $2,777,400.00 and unit prices. The General Fair Wages Clause was inserted in the contract.

Dredging of Digby, N.S. Name of contractors, Saint John Dry Dock and Shipbuilding Co., Ltd., Saint John, N.B. Date of contract, April 23, 1930. Amount of contract, approximately $34,501.60. The General Fair Wages Clause was inserted in the contract.

Contract in Class "B" (Interior fittings, etc.)

Supply and installation of interior fittings in the public building at Hantsport, N.S. Name of contractor, Wood Specialties, Ltd., Alexandria, Ont. Date of contract, April 7, 1930. Amount of contract, $1,000.00. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Fabrication, delivery and erection of steel superstructure at Mile 373.6 and 412 Hudson Bay Railway. Name of contractors, Canadian Bridge Co., Ltd., Walkerville, Ont. Date of contract, June 1, 1929. Amount of contract, $66,617.70. The General Fair Wages Clause was inserted in this contract.

Fabrication, delivery and erection of 90 ft. twin span turntable at Churchill, Man., terminus of the Hudson Bay Railway. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, June 7, 1929. Amount of contract, $26,850.00. The General Fair Wages Clause was inserted in the contract.

Construction of a first-class steel, screw, oil burning, ice-breaking, Railway Car Ferry Vessel for service between New Brunswick and Prince Edward Island. Name of contractors, Davie Shipbuilding & Repairing Co., Ltd., Lauzon, P.Q. Date of contract, April 1, 1930. Amount of contract, $2,112,600.00. The General Fair Wages Clause was inserted in the contract.

Manufacture and delivery of 36 electric capstans required for the locks and other structures of the Welland Ship Canal. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, April 17, 1930. Amount of contract, approximately $201,996.00. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in April, 1930, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	$478.53
Making and Repairing Rubber Stamps, Daters, etc.—	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	167.93
Capital Rubber Stamp Works, Ottawa, Ont.	6.50
Making up and Supplying Letter Carriers' Uniforms—	
The Barrymore Cloth Co., Toronto, Ont.	7,468.97
Mail Bag Fittings—	
Walter H. Wickware, Ottawa, Ont.	900.00
Scales—	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	289.75
Letter Boxes, etc.—	
Eastern Steel Products, Montreal, P.Q.	145.00
Stamping Ink, etc.—	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	2.70
J. E. Poole Co., Toronto, Ont.	569.05
Satchels—	
Hugh Carson Co., Ltd., Ottawa, Ont.	1,932.98

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Textiles and Clothing

Montreal, Quebec.—The Association of Manufacturers of Cloaks, Suits and Ladies' Garments and the International Ladies' Garment Workers' Union and the Montreal Joint Council of the Cloak, Suit and Dressmakers' Union, composed of Cutters Local No. 19, Operators and Finishers Local No. 43 and Pressers Local No. 61.

Agreement to be in effect from March 14, 1930, to January 1, 1932, and from year to year until either party gives notice of change within the four weeks previous to January 1, of any year.

This agreement was signed at the conclusion of the strike which was reported in the Labour Gazette for April, page 379. The agreement is similar to that signed by the same union and the independent women's clothing manufacturers which was printed in full in the Labour Gazette for April, page 447, there being in some cases differences in the classes of labour and wage rates. There is also a provision for a Joint Conference Board to deal expeditiously and settle all complaints, disputes and grievances, consisting of three representatives from the union and three from the employers' association, to meet within twenty-four hours of a complaint being made by either party, with provision for an independent arbitrator if no decision is reached by the Board.

Toronto, Ontario.—Amalgamated Garment Manufacturers' Council and the International Ladies' Garment Workers' Union and the Toronto Joint Board of Cloak, Suit and Dressmakers' Union, composed of the Cloak Operators' Union Local No. 14, Cutters' Local No. 83, Local No. 68, and Pressers' Local No. 92.

Agreement to be in effect from February 7, 1930, to February 6, 1931, and from year to year until either party gives notice within four weeks of February 1, of any year.

This agreement was signed at the conclusion of the strike which was reported in the Labour Gazette, February, page 118.

The agreement is similar to the one signed by the union and the Association of Manufacturers of Cloaks, Suits and Ladies' Garments, Montreal, mentioned above, including the same provision for a Joint Conference Board, but with certain minor differences in the classes of labour and wage rates.

Manufacturing: Miscellaneous

Vancouver, B.C.—Vancouver Sign Contractors' Association and the International Brotherhood of Painters, Decorators and Paperhangers, Local No. 726 (Sign and Pictorial Painters).

Agreement to be in effect from March 31, 1930, to March 31, 1931.

Union members will be employed when available, and union members will work for recognized master sign painters paying business tax and carrying Workmen's Compensation Insurance, who are parties to this agreement. Any employer may employ a sign painter who has applied for membership in the union. The employer is to notify the union representative when requiring sign painters and union members will not work by the day for any firm or corporation outside of union shops without the permission of the union and the Vancouver Sign Contractors' Association.

Hours: 44 per week.

Overtime: for first hour, regular rate; next three hours, time and one half. Overtime over four hours and work on Sundays and legal holidays, double time.

Wages for journeymen sign painters: $1.10 per hour.

Time allowed for going to and returning from all points outside a two-mile radius from shop. No overtime paid on travelling time. When members are unable to return home each night, a minimum of $2.50 per night will be allowed for hotel expenses.

Apprentices will serve five years and will be legally bound after the first six months. After the five year period, the joint examining committee may extend the apprenticeship term for periods not exceeding six months during which time no further examination will be granted. If an apprenticeship system is introduced by government legislation, the parties to this agreement will abide by it.

The status of any employee other than a journeyman sign painter or bound apprentice is subject to a joint committee, applications for consideration to be at six months periods.

In case of a dispute, union members will not order any strike against employers nor quit work before the matter is referred to a joint arbitration committee. If any dispute arises, a joint committee consisting of three members of each party will be appointed and their decision will be binding on both parties.

No sign painter is to sub-contract from the employer, and no sign painter who is steadily employed in a union shop will be allowed to take contracts on his own account. Any sign

painter who is not employed and takes any sign work will abide by the price book adopted by the Sign Contractors' Association.

Construction: Buildings and Structures

Lethbridge, Alberta.—Certain Contractors and the International Hod Carriers, Building and Common Labourers' Union, Local No. 627.

Verbal agreement to be in effect from September 1, 1929, to September 1, 1930, and until two months' notice is given by either party.

Two strikes to enforce the terms of this agreement are reported on pages 498 and 499 of this issue.

Hours: the hours provided in the agreement are 8 per day with 4 on Saturdays, but it was later agreed that hours would be 9 per day and 5 on Saturdays.

Overtime: all work over 9 hours per day, Saturday afternoons and legal holidays, time and one half.

Wages per hour: mortar mixers and plasterers' mixers, 70 cents; concrete, bricklayers' and stonemasons' labourers, 60 cents; all other labourers 50 cents.

Edmonton, Alberta.—Edmonton General Contractors' Association and the International Hod Carriers, Building and Common Labourers' Union, Local No. 92.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and for another year unless either party gives notice of change by April 1, 1931.

Union members or those who can qualify for membership will be given preference in employment.

Hours: 8 per day, but when necessary this clause will not apply.

Wages for general labourers: 50 cents per hour.

No work on Sundays nor on four specified holidays, except in case of emergency.

Construction: Shipbuilding

Saint John, N.B.—Saint John Dry Dock and Shipbuilding Company Limited and the Boilermakers, Iron Shipbuilders, etc., Employed by Them.

Agreement to be in effect from March 1, 1930, to March 1, 1931, and from year to year thereafter unless 30 days' notice is given by either party.

This agreement is similar to the one previously in force and summarized in the Labour Gazette for January, 1930, with the following exceptions:—

Employees who are to work on regular night shift will be given 24 hours' notice or be paid overtime rates for the first night. If on night shift for less than five nights, time and one half to be paid for all time worked. Regular night shift to be paid time and one quarter for first nine hours, time and one half after nine hours until starting time of day shift. If asked to work after completion of regular night shift, double time to be paid. When employees on regular night shift for nine hours only, the company will provide transportation to their homes.

On the days before Christmas and New Year's Day, work to stop at noon, after which double time will be paid.

Hot ashes to be removed from fire boxes, etc., or if not and men are required to clean boilers, time and one quarter to be paid. For work in oil tanks, engine room tanks and all other work with oil, five cents per hour extra to be paid.

Saint John, N.B.—Saint John Drydock and Shipbuilding Company Limited and the Blacksmiths and Helpers Employed by Them.

Agreement to be in effect from March 1, 1930, to March 1, 1931, and from year to year until either party gives 30 days' notice.

This agreement is similar to the one previously in force and summarized in the Labour Gazette, August, 1929, page 927, with the following exceptions:—

The same provisions as to work on night shift and half holidays before Christmas and New Year's Day as are summarized above in the agreement between the company and the boilermakers and iron shipbuilders, etc., are included in this agreement.

Wages per hour: general blacksmiths 65 cents, helpers on general fires 40 cents, skilled helpers 45 cents.

Saint John, N.B.—Saint John Dry Dock and Shipbuilding Company Limited and the Machinists and Apprentices Employed by Them.

Agreement to be in effect from March 1, 1930, to March 1, 1931, and from year to year until either party gives 30 days' notice.

This agreement is similar to the one previously in force and summarized in the Labour Gazette, December, 1929, page 1415, with the following exceptions:—

The same provisions as to work on night shift and half holiday before Christmas and New Year's Day, as were summarized above in the agreement between the company and the boilermakers, iron shipbuilders, etc., are included in this agreement.

Wages per hour: machinists and fitters 65 cents; helpers 40 cents.

Wages per hour for apprentices: first year 15 cents, second year 20 cents, third year 25 cents, fourth year 30 cents. In addition, a bonus of 5 cents per hour on June 1, of each year will be given apprentices who fulfill the requirements of the company's rules for apprentices.

Apprentices to serve four years and they will then be retained on probation for one year and will be paid 10 cents per hour over the fourth year apprentice rate (in addition to bonuses). Apprentices must be at least 16 years of age but not over 18. The clause limiting the number of new apprentices to be employed is omitted from this agreement.

For work in oil tanks, engine room tanks and all other work with oil, five cents per hour extra to be paid.

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued downward, the weekly family budget in terms of retail prices being substantially lower, while the Dominion Bureau of Statistics index number of wholesale prices showed a slight decrease.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.24 at the beginning of April, as compared with $11.67 for March; $11.01 for April, 1929; $10.87 for April, 1928; $10.80 for April, 1927; $11.36 for April, 1926; $10.56 for April, 1925; $10.16 for April, 1924; $10.64 for April, 1923; $10.26 for April, 1922; $12.68 for April, 1921; $15.99 for April, 1920; $16.92 for May 1920 (the peak); $12.57 for April, 1918; and $7.51 for April, 1914. The price of eggs showed a substantial season fall, while less important decreases occurred in the prices of butter, veal, pork, bread, flour and potatoes. The prices of beef, mutton and bacon were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.53 at the beginning of April, as compared with $21.96 for March; $21.30 for April, 1929; $21.11 for April, 1928; $21.02 for April, 1927; $21.64 for April, 1926; $20.82 for April, 1925; $20.58 for April, 1924; $21.21 for April, 1923; $20.66 for April, 1922; $23.31 for April, 1921; $25.34 for April, 1920; $26.92 for July, 1920 (the peak); $20.01 for April, 1918; and $14.32 for April, 1914. Fuel was slightly lower, due to lower prices for coal and wood. Rent was somewhat higher.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 91.7 in April, as compared with 91.9 for May; 94.1 for April, 1929; 98.3 for April, 1928; 97.3 for April, 1927; and 101.2 for April, 1926. Sixty-seven prices quotations were higher, one hundred and twenty were lower and three hundred and fifteen were unchanged.

In the grouping according to chief component materials seven of the eight main groups were lower and one was higher. The groups which declined were: the Animals and their Products group, due chiefly to lower prices for butter and eggs; the Fibres, Textiles and Textile Products group, because of lower prices for cotton fabrics, raw silk, silk fabrics and raw wool; the Wood, Wood Products and Paper group, due to lower prices for cedar shingles and groundwood pulp, which more than offset advances in certain lines of lumber; the Iron and its Products group, because of declines in the prices of pig iron and steel billets; the Non-Ferrous Metals and their Products group, due to lower quotations for antimony, copper, copper products, lead and zinc; the Non-Metallic Minerals and their Products group, due to lower prices for lime and cement, and the Chemicals and Allied Products group, because of decreases in the prices of copper sulphate, ether and logwood extract. The Vegetables and Vegetable Products group advanced, increases in the prices of wheat, barley, corn and fresh vegetables more than offsetting declines in the prices of rubber, sugar, coffee and chinawood oil.

In the grouping according to purpose, consumers' goods declined, due mainly to lower prices for sugar, coffe, cotton goods, silk fabrics, woollen cloth and yarn. In producers' goods, materials for the textile and clothing industries, for the metal working industries, for the chemical using industries, as well as miscellaneous producers' materials, were lower. Materials for the fur and leather goods industries and for the milling and other industries were slightly higher.

In the grouping according to origin, raw and partly manufactured goods advanced, lower prices for wool, silk, rubber, raw sugar, coffee, copper, lead and zinc being more than offset by increases in the prices of furs, cotton, grains, fresh vegetables, tin and silver. Fully and chiefly manufactured goods declined, due chiefly to lower prices for butter, sugar, copper products and cotton fabrics. Domestic farm products were unchanged, articles of marine origin and articles of mineral origin were slightly higher, while articles of forest origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number

(*Continued on page 590*)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

*Prior to 1926 number of commodities was 236.

(*Continued from page 582*)

of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expendi-

ture on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86.3; 1917, 84·6; 1918, 82·9; 1919, 81.6; 1920, 81·1; 1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5; 1925, 73·8; 1926, 73.2; 1927, 70·9; 1928, 69·3; 1929, 67·3; 1930, 65·5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73·8; 1924, 72·2; 1925, 69·9; 1926, 68·7; 1927, 68·2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98·1; 1916, 96·3; 1917, 100·7; 1918, 107·4; 1919, 111·1; 1920, 125·4; 1921, 143.6; 1922, 140·6; 1923, 135·7; 1924, 134·6; 1925, 131·6; 1926, 131·1; 1927, 129.4; 1928, 127·8. Natural gas 1913, 100; 1914, 107·0; 1915, 112·5; 1916, 112·5; 1917, 113·9; 1918, 114.0; 1919, 116·1; 1920, 125·1; 1921, 137·6; 1922, 163·2; 1923, 163·0; 1924, 162·2; 1925, 179·3; 1926, 172·4; 1927, 165·9; 1928, 158·6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906, 107·5; 1907, 108·8; 1908, 106.9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106.6; 1913, 100·0.

Retail Prices

Beef prices were somewhat higher than in March, sirloin steak being up from an average of 36.2 cents per pound to 36.6 cents; round

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

steak from 31·4 cents per pound to 31.8 cents; rib roast from 29 cents per pound to 29·4 cents; and shoulder roast from 23·2 cents per pound to 23.4 cents. Veal was down in the average from 25·6 cents per pound in March to 24·9 cents in April. Mutton was slightly higher at an average price of 31.8 cents per pound, as compared with 31·5 cents in March. Both fresh and salt pork were lower, the former averaging 30·3 cents per pound in April as compared with 30·6 cents in March, and the latter 27·4 cents per pound in April, as compared with 27·7 cents in March.

Eggs showed a substantial seasonal fall in practically all localities, fresh averaging 36·9 cents per dozen in April, as compared with 52·1 cents in March and 59·7 cents in February, and cooking averaging 32·5 cents per dozen in April, 45·8 cents in March and 51.8 cents in February. Milk was unchanged at an average price of 12·8 cents per quart. Dairy butter was down from an average of 41·6 cents per pound in March to 39·4 cents in April, and creamery from 45·4 cents per pound in March to 43·2 cents in April.

Bread was slightly lower at an average price of 7·7 cents per pound. Decreases were reported from Three Rivers, Orillia, Galt. Kitchener and Sault Ste. Marie. Flour was slightly lower at an average price of 5 cents per pound. Beans fell from an average price of 9·9 cents per pound in March to 9·5 cents in April. Decreases were reported from most localities. Potatoes averaged $2.38 per ninety pounds, as compared with $2.50 in March. Prices averaged lower in all the provinces, except British Columbia where a considerable number of increases were reported. Granulated sugar was slightly lower at an average price of 7·1 cents per pound. Anthracite coal averaged $16.22 per ton. Decreases were reported from Sorel, Toronto and Hamilton. An increase in rent was reported from Sherbrooke.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices for April averaged slightly higher than the low quotations recorded for March. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis being $1.098 per bushel in April, as compared with $1·062 in March. The continued low prices were said to be due to the favourable weather in Canada and to the large world supplies. In coarse grains, western barley advanced from 46·6 cents per bushel to 48·8 cents; American corn from 94·8 cents per bushel to 98·3 cents; and rye from 60·5 cents per bushel to 66·3 cents; while oats declined from 55·6 cents per

bushel to 53·8 cents. Flour was slightly lower at $7.90 per barrel. Rolled oats was down from $3.55 per ninety pound bag to $3.40. Bran and shorts advanced, the former being up from $31.94 per ton in March to $32.85 in April and the latter from $33.94 per ton in March to $34.05 in April. Raw sugar at New York declined from $1·906 per hundred pounds to $1·625 and granulated at Montreal from $5.08 per hundred pounds to $4.84. The prices of raw rubber again declined, reaching the levels of 1922, Ceylon at New York being 14·9 cents per pound as compared with 15·3 cents in March. Coffee at Toronto fell from 23 cents per pound to 21 cents. In livestock, good steers at Toronto advanced from $10.20 per hundred pounds to $10.32 but the price at Winnipeg was 21 cents per hundred pounds lower at $9.21. Veal calves at Toronto declined from $13.65 per hundred pounds to $12.01 and hogs from $13.50 per hundred pounds to $13. Creamery butter at Montreal declined from 37.3 cents per pound to 35 cents and at Toronto from 38·5 cents per pound to 35·8 cents. At Montreal fresh eggs declined from 36 cents per dozen to 34 cents. Raw cotton at New York advanced from 15·23 cents per pound to 16·2 cents. Cotton fabrics, however, were lower, cottonades being down from 49½ cents per pound to 44 cents, apron gingham from 75·6 cents per pound to 73·5 cents and cotton blankets from 54·75 cents per pound to 51·87 cents. Raw wool was down from 18 cents per pound to 17 cents. British Columbia shingles declined from $3.25 per thousand to $2.80. Malleable pig iron was $1 per ton lower at $21. Steel billets also decined, the price being down from $36 per ton in March to $35 in April. In non-ferrous metals, copper was down from $19.75 per hundred pounds to $17.65; lead from $5.95 per hundred pounds to $5.65; and zinc from $5.55 per hundred pounds to $5.34. Portland cement at Vancouver was down 20 cents per barrel to $2.55.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index number for various countries appeared in the LABOUR GAZETTE for April.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 74·9 for March, a decline of 2·6 per cent from the February index number, and continued the rapid decline which began last November. Compared with February price levels, nine of the ten groups were lower in March, the exception being a slight increase in iron and steel. Cereals, meat and fish and wool showed the greatest decreases. Foods fell 4·1 per cent and non-foods 1·7 per cent in the month.

The *Economist* index number, on the base 1927=100, was 83·1 at the end of March, which is 1·3 per cent lower than at the end of February. All groups declined, the principal changes being in foods other than cereals and meats and in miscellaneous industrial commodities.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877=100, was 103·0 at the end of March, a fall of 1·7 per cent from February. This is the lowest index number recorded in fifteen years or since February, 1915. The following quotation is taken from the *Statist*, April 19: "The rise in wholesale prices since the outbreak of the war has now been narrowed to 26·8 per cent. On the evidence of the index number the fall in prices appears to be losing some of its momentum, but as yet there is no apparent sign that the movement has spent itself. The fact that last month the lowering of prices was once again fairly well distributed over all groups of commodities comes as further evidence that genuine deflationary tendencies are at work." With the exception of sundries, all groups were lower in March than in February, the greatest reductions being in animal foods, chiefly pork and butter.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 157 at April 1, a fall of 2·5 per cent from March 1. This was due principally to a substantial decline in food prices, due partly to seasonal reductions in the prices of eggs, milk and butter. Clothing also was lower, while rent, fuel and light and sundries were unchanged.

France

WHOLESALE PRICES.—The index number of the General Statistical Office on the base July, 1914=100, was 565 for March, a decline of 1·9 per cent for the month. All groups were included in the general downward movement, minerals and metals and textiles showing the greatest change.

COST OF LIVING.—The official index number of the cost of living, Paris, on the base 1914=100, was 565 for the first quarter of 1930, which is the same figure as for the previous quarter. Food was considerably lower, while heat and light, clothing and sundries were higher; rent was unchanged.

Germany

COST OF LIVING.—The official index number of the cost of living on the base 1913-1914=100, was 148·7 for March, a decline of 1·1 per cent for the month. The principal change was a fall of 1·9 per cent in food. Other groups varied only slightly from the February level.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce on the base 1913=100, was 436·49 for March, a decline of 1·8 per cent for the month. All groups were included in the movement, the principal declines being in vegetable foods, textiles and miscellaneous vegetable products.

COST OF LIVING.—The index number of the cost of living, Milan, on the base July, 1914=100, was 543·47 for February as compared with 549·0 for January, a fall of one per cent for the month. Foods declined 1·7 per cent from the January level.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1545 for February, as compared with 1551 for January. The decline was due to lower prices for foodstuffs of vegetable origin and also for textiles; on the other hand, animal products were higher. Wood and wood products, metals and their products, non-metallic minerals and their products and chemicals and manures were practically unchanged.

COST OF LIVING.—The official index number of retail prices of food, fuel, light, rent and sundries, on the base July, 1914=1000, was 1592 for February, as compared with 1605 in November. Dairy produce and fuel and light were higher, but all other groups declined.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 90·8 for March, a decline of 1·4 per cent from February. All groups were included in the general downward movement, the group showing the greatest decline being farm products which amounted to 3·3 per cent.

The *Annalist* index number, on the base 1913=100, was 133·6 for April as compared with 134·0 for March, a decline of 0·3 per cent. Declines were noted in farm products, textile products, metals, building materials and chemicals; on the other hand, small advances were shown in food products, fuels and miscellaneous products.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 157·0 for March, as compared with 158·9 for February, a decline of 1·2 per cent for the month, due principally to lower food prices, although there were also slight reductions in clothing, fuel and light and sundries. The group "shelter" was unchanged.

COMPARATIVE PURCHASING POWER OF HOURLY WAGES IN TERMS OF FOOD, ETC., IN VARIOUS COUNTRIES

THE International Labour Office has maintained since 1924 a record of comparative real wages in various countries, originally compiled and published by the British Ministry of Labour in 1923. Summaries of these figures have been given from time to time in the LABOUR GAZETTE, December, 1929, page 1421, and in various preceding issues. In 1929, the scope of the statistics was considerably increased by including figures for a larger number of cities in each country, and by increasing the number of commodities for which prices are secured as well as the number of occupations and industries for which wages are secured. From these data an index number of real wages, showing the comparative purchasing power of hourly wages in terms of food, fuel and light and soap have been calculated for each country, taking Great Britain as the standard and therefore represented by 100. The resulting figures for July, 1929, were summarized in the LABOUR GAZETTE for December, 1929.

An international budget of foods, fuel and light and soap was constructed, showing the average quantities of each article ordinarily consumed by the workers and their families in the various countries so far as information was available. The cost of this budget in each country was then calculated, using the average prices in the cities covered. The average hourly wage in each country was calculated from the figures for cities and occupations included, and the purchasing power of wages in each country was determined by dividing the cost of the budget into the average hourly wage. The index number of real wages for each country was determined by taking the

figure representing the purchasing power of hourly wages in it and dividing it by the similar figure for Great Britain.

The international budget now used includes twenty-seven foods and fuel (coal or its equivalent), electricity, gas, paraffin oil and soap, there being a calculation for all these items and one for the food separately. The wage data secured include building trades, metal trades, furniture making, printing trades, electrical work, transportation, bakers and civic labourers. The International Labour Office secured the data for prices and wages for January, 1930, also, and published the results of the collection and compilation in the *International Labour Review* for April, 1930, including for each country a table of hourly wages in each city, for each occupation, and a table of the average retail prices of the various commodities, tables of the items in the international budget of foods, etc., its cost in each country, and a table of the index numbers of real wages calculated from such figures. The accompanying table gives index numbers of real wages for each country as published.

It is pointed out by the International Labour Office that the figures issued are subject to important reservations in that they are based on only certain items in the cost of living and on the wages for relatively few classes of labour in the large cities in each country. It is the intention, however, to increase the scope of the figures in both respects with the object of determining as accurately as possible the comparative levels of cost of living and wages, and consequently the relative purchasing power of wages, that is real wages, in each country.

In publishing these figures for January, 1930, the International Labour Office states that some changes have been made in the budget used for July, 1929, so that the resulting index numbers for January, 1930, are not comparable with those for July, 1929.

INDEX NUMBERS OF THE RELATIVE LEVELS OF REAL WAGES IN THE LARGE TOWNS OF DIFFERENT COUNTRIES IN JANUARY, 1930.

(Base. Great Britain=100)

Country.	Number of towns.	Index numbers based on food.	Index numbers based on food, fuel, light and soap.
Great Britain	**7**	**100**	**100**
Canada	6	168	165
Germany	6	77	77
Australia	2	152	148
Austria	3	53	52
Spain	4	49	45
United States	10	197	197
France	4	59	58
Irish Free State	3	100	97
Italy	7	51	43
Netherlands	4	89	87
[1]Denmark	1	112	112
[1]Estonia	2	45	45
[1]Poland	4	68	65
[1]Sweden	3	115	113
[1]Czecho-Slovakia	3	77	74

(1) Index numbers for these countries are calculated from actual earnings in each. It is stated the figures would be somewhat lower if based on actual earnings in Great Britain instead of on wage rates in Great Britain.

CENSUS OF INDUSTRY IN CANADA

Manufacturing Statistics for 1927 and 1928

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, takes annually by mail an industrial census covering statistics of fisheries, mines, forestry, and general manufactures in Canada. Summary figures for all manufacturing industries for the year 1928 have recently been issued, the accompanying tables give these figures in some detail.

Table I is a comparative study of the principal statistics of the manufacturing industries for the past five years. The years for which these statistics are presented are the annual censuses of 1924-1928, and the increase by percentages of the year 1928 over 1927 is included. It will be observed that there is a decided increase in the various items since 1924, the figures for the year 1928 also showing increases over those for 1927. The most noteworthy increase for 1928 is that in capital invested, followed by gross value of production each showing an increase of over 10 per cent; the number of employees was increased by over 9 per cent and the wages paid increased over 6 per cent.

Table II is a summary of the principal statistics of the manufacturing industries of Canada for the years 1927-1928, by provinces and groups of industries. Table III is a statement of the statistics by groups and the principal sub-groups for the same period, with the exception of the manufacturing of minerals and chemicals for which the figures were published in the LABOUR GAZETTE, December, 1929, pages 1434-1439. In the sub-groups table some of the smaller industries are omitted, although the statistics of these have been included in the totals of the summary tables I and II.

TABLE I.—PRINCIPAL STATISTICS OF MANUFACTURING INDUSTRIES IN CANADA FOR 1924, 1925, 1926, 1927 AND 1928

Items		1924	1925	1926	1927	1928	Increase per cent in 1928 over 1927
Wage earners	No.	432,273	466,602	499,733	533,450	566,780	6·25
Wages	$	420,269,406	452,958,655	501,144,989	531,583,250	580,428,493	9·16
Salaried employees	No.	76,230	77,623	81,794	85,483	91,243	6·74
Salaries	$	139,614,639	143,056,516	152,705,944	162,348,978	174,770,879	7·65
Establishments	No.	22,178	22,331	22,708	22,936	23,379	1·93
Capital invested	$	3,538,813,460	3,808,309,981	3,981,569,590	4,337,631,558	4,780,296,049	10·20
Cost of materials*	$	1,438,409,681	1,587,665,408	1,755,158,399*	1,789,574,604	1,950,804,339	9·00
Gross value of products	$	2,695,053,582	2,948,545,315	3,247,803,438	3,425,498,540	3,769,847,364	10·05
Value added by manufacture	$	1,256,643,901	1,360,879,907	1,519,279,246	1,635,922,936	1,819,043,025	11·19

*Central Electric stations not included in this item prior to 1926.

TABLE II.—SUMMARY OF PRINCIPAL STATISTICS OF THE MANUFACTURING INDUSTRIES IN CANADA 1927 AND 1928, BY PROVINCES AND GROUPS OF INDUSTRIES

—	Year	Establishments	Capital	Salaried employees			Wage earners			Cost of Materials	Gross value of production
				Male	Female	Salaries	Male	Female	Wages		
Provinces		No.	$	No.	No.	$	No.	No.	$	$	$
Canada	1927	22,936	4,337,631,558	65,886	19,597	162,348,978	413,634	119,816	531,583,250	1,789,574,604	3,425,498,540

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930

THE number of fatal industrial accidents (including fatalities from industrial diseases included with fatal accidents by workmen's compensation boards, etc., and also fatalities to persons incidentally to the pursuit of their occupations), which were recorded in the Department as occurring during the first quarter of 1930, was 322, there being 97 in January, 114 in February and 111 in March.

The report for the fourth quarter of 1929 was given in the LABOUR GAZETTE, February page 234. In the first quarter of 1929, 311 fatal accidents were recorded (LABOUR GAZETTE, May, 1929, page 554). The supplementary list of fatal industrial accidents on pages 608-610 contain 58 for 1929. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the first quarter of 1930 were as follows: agriculture, 16; logging, 44; fishing and trapping, 5; mining, non-ferrous smelting and quarrying, 57; manufacturing, 59; construction, 46; electric light and power, 3; transportation and public utilities, 65; trade, 11; service, 16.

Of the mining accidents, 33 were in "metalliferous mining", 14 were in "coal mining", 4 in "non-metallic mineral mining", and "quarrying, n.e.s.", and 6 in "structural materials".

Of the accidents in manufacturing, 5 were in "vegetable foods, drink and tobacco", 3 in "animal foods", 1 in "rubber products", 18 in "saw and planing mill products", 2 in "wood products", 8 in "pulp, paper and paper products", 11 in "iron, steel and products", 2 in "non-ferrous metal products", 6 in "non-metallic mineral products", and 2 in "chemical and allied products".

In construction were 22 fatalities in "buildings and structures", 1 in "railway construction", 4 in "highway and bridge", and 19 in "miscellaneous construction."

In transportation and public utilities, there were 35 fatalities in "steam railways", 17 in "water transportation", 2 in "air transportation", 9 in "local transportation", and 2 in "telegraphs and telephones".

In trades there were 4 fatalities in "wholesale", and 7 in "retail".

Of the fatalities in service, 9 were in "public administration", 1 in "recreational", 1 in "laundering, dyeing and cleaning", 4 in "personal and domestic", and 1 in "professional establishments".

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:

On February 4—two miners were crushed by fall of rock at Frood Mine, Ontario.

Two coal miners were caught under a fall of stone at Springhill, N.S. on March 11.

On February 14—two labourers engaged in building construction at Copper Cliff, Ont., were killed when a putty tank exploded, and on March 17 two laborers engaged in the same industry at Montreal, P.Q., lost their lives by falling down an elevator shaft when some thin planking gave way.

On February 22, an explosion of dynamite resulted in three fatalities to labourers employed on power dam construction near Vancouver B.C. and on March 22, four workmen employed in similar work near Prince Rupert, B.C., were drowned when their boat capsized in a swollen stream.

In water transportation, four members of a steamer crew were drowned on January 25, when their boat was wrecked on a reef during a storm near Tiverton, N.S., and on March 10 two boom-men were struck by a train in Restigouche County, N.B.

In air transportation, a pilot and radio operator lost their lives when their plane crashed in a dense fog near Long Lake, Ontario, on March 18.

It may be mentionned that during this quarter, a fatality occured in Canadian waters which is not included in this list, owing to the fact that the man killed was employed by another country, being a seaman on the British steamer Bonnington Court of London, who fell into a hold of the ship while at Port Alberni on January 5.

Supplementary List of Accidents

The supplementary list of fatal accidents occurring in 1929, to be found after the main table of accidents, contains 58 fatalities, of which 3 were in agriculture, 9 in logging, 3 in fishing and trapping, 4 in mining, non-ferrous smelting and quarrying, 13 in manufacturing, 1 in electric light and power, 6 in construction, 7 in transportation and public utilities, 7 in trade and 5 in service. Two of these accidents occurred in February, 1 in April, 1 in May, 3 in June, 1 in August, 3 in September, 5 in October, 15 in November and 27 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farmer	Near Brampton, Ont.	Jan. 8	.....	Fell down hay chute, fracturing skull.
Farm hand	Ottawa, Ont.	" 9	57	Injured when his horses ran away.
Farmer	Near Kirkwall, Ont.	" 20	50	Fell 50 ft. while repairing windmill.
Farmer	Near Jarvie, Alta.	" 25	.....	Accidental discharge of rifle.
Farmer	Near Kerrobert, Sask.	" 28	.....	Burned in attempt to save children from fire.
Farmer	Near Hubalta, Alta.	" 29	30	Train collided with his rack.
Farmer	Amaranth District, Man.	Feb. 1	65	Burned in fire that destroyed home.
Farmer	Near Aylmer, Ont.	" 5	49	Burned by explosion from lighting fire with kerosene.
Farm worker	Near Richmond, Ont.	" 11	26	Fell into tank and drowned when his head struck side of it.
Farmer's son	Near Swift Current, Sask.	" 22	16	Thrown under wagon when team bolted.
Farmer	Near Sarnia, Ont.	" 23	43	Gored by bull.
Farm hand	Near Chatham, Ont.	" 27	26	Drowned when horses bolted and wagon upset into ditch.
Farmer	Near White Rock, B.C.	About Mar. 1	46	Injured during blasting operations while clearing land.
Farmer	Near Kindersley, Sask.	Mar. 1	40	Burned by gasolene explosion from using blow torch on pumping engine.
Farmer	Near Laflèche, Sask.	" 2	.....	Trapped in fire which destroyed his home following explosion from starting fire with kerosene.
Farmer	Near Melfort, Sask.	" 16	61	Burned in fire that destroyed his shack from starting fire with kerosene.
LOGGING—				
Logger	Kapuskasing, Ont.	Jan. 2	21	Axe slipped and struck him on foot.
Teamster	Muskoka Falls, Ont.	" 3	54	Fell from load of logs and dragged under sleigh. Died Jan. 9.
Logger	Near Campbellville, Ont.	" 4	.....	Crushed by falling tree.
Foreman	Kelowna, B.C.	" 6	54	Crushed under sleigh load of logs on which he was riding when it upset.
Logger	Near Fort Frances, Ont.	" 13	60	Crushed between two logs. Died Jan. 14.
Teamster	Gregg Township, Ont.	" 13	33	Injured when thrown from water tank and was run over. Died Jan. 17.
Skidder	Antross, Alta.	" 15	27	Struck on head by tree.
Logger	Birch Lake, Sask.	" 15	.....	Struck by falling tree fracturing skull.
Logger	Destor, Que.	" 16	19	Struck by falling tree.
Logger	Near Nanaimo, B.C.	" 16	24	Struck by rolling log.
Labourer	Destor, Que.	" 21	19	Slipped and fell on sleigh. Died Feb. 7.
Logger	Near Nanaimo, B.C.	" 24	21	Struck by falling tree.
Log loader	Pilon's Camp, Que.	" 29	20	Head crushed against skidway by rollkng log Died Feb. 14.
Engineer	Jervis Inlet, B.C.	Feb. 3	52	Crushed by donkey engine. Died Feb. 8.
Tractor driver	Blakeburn, B.C.	" 5	29	Tractor rolled over him.
Logger	Near Bloomfield, N.B.	" 6	.....	Struck by falling limb. Died Feb. 8.
Logger	Near Granby, Que.	" 7	48	Struck by falling tree. Died Feb. 8.
Labourer	River St. Pierre, Que.	" 8	50	Crushed by falling log from rollway.
Logger	Near St. Joachim, Que.	" 10	20	Struck by falling log while piling logs.
Loader	Calumet, Que.	" 13	48	Crushed by rolling logs while unloading logs.
Logger	Near Prince George, B.C.	" 14	40	Struck by falling tree.
Logger	Near Doaktown, N.B.	About Feb. 16	57	Log fell on him.
Logger	Phoenix, Alta.	Feb. 17	40	Struck by falling tree.
Logger	Near West Shefford, Que.	" 18	32	Struck by falling tree. Died Feb. 19.
Logger	Mile 112, Ruel Sub., Ont.	" 18	30	Struck by falling snag. Died Feb. 20.
Chopper	Shubenacadie, N.S.	" 19	80	Struck by falling tree. Fractured skull.
Chokerman	Bloedel, B.C.	" 19	22	Struck by falling tree.
Chokerman	Theodosia Arm, B.C.	" 19	23	Caught in line.
Logger	Nootka, B.C.	" 20	52	Injured in logging accident.
Sawyer	Flanders, Ont.	" 21	27	Struck on head by falling tree.
Teamster	Near Waneta, B.C.	" 21	.....	Log rolled on him breaking his neck.
Teamster	Near Blind River, Ont.	About Feb. 25	45	Fell under sleigh load of logs.
Teamster	Creston, B.C.	Feb. 27	.....	Fractured leg. Septicemia. Died March 18.
Teamster	Hazelton, B.C.	" 27	.....	Kicked in head by horse.
Labourer	Boucher's Camp, Ont.	Mar. 4	65	Tree fell on him.
Logger	Mine Centre, Ont.	" 5	31	Struck by rolling log.
Logger	Near Elk Lake, Ont.	About Mar. 5	.....	Struck by falling tree.
High Rigger	Menzies Bay, B.C.	Mar. 10	44	Fell 40 feet from loading boom. Fractured skull.
Tie loader	Near Lake Windermere, B.C.	About Mar. 10	.....	Neck broken when truck load of ties upset.
Logger	Near Fort Frances, Ont.	Mar. 12	About 30	Struck on head by log.
Chokerman	Elk Bay, B.C.	" 18	28	Crushed by log when it slipped from tongs. Died March 19.
Logger	Bonghey Bay, B.C.	" 21	45	Struck by branch of tree. Fractured skull.
Bucker	Theodosia Arm, B.C.	" 22	28	Struck by falling sapling.
Loader	Great Central Lake, B.C.	" 28	30	Struck by log.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
Fisherman	Near Moose Lake, Man.	Jan. 28	21	Burned in fire that destroyed caboose and fish swing.
Fisherman	Victoria, B.C.	Feb. 1	.....	Drowned when his boat capsized and sank.
Fisherman	New Westminster, B.C.	" 7	44	Burned in fire in fishing launch.
Fisherman	Near Alert Bay, B.C.	Mar. 13	.....	Drowned from fishing canoe.
Trapper	Near Rosenburg, Man.	" 19	37	Perished in blizzard.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining—				
Ore sorter	Cobalt, Ont.	Jan. 1	.....	Silicosis. Laid off on Dec. 10, 1928.
Miner	Copper Mountain, B.C.	" 3	25	Crushed by fall of rock in chute.
Skiptender	Frood, Ont.	" 4	40	Fell down shaft in mine.
Tractor driver	Cold Lake, Man.	" 6	28	Crushed under tractor when it overturned.
Miner	Flin Flon, Man.	" 8	28	Fell down shaft-in mine. Fractured skull.
Shift boss	Frood, Ont.	Jan. 11	38	Crushed by falling earth in mine.
Electrician	Flin Flon, Man.	" 17	44	Fell from beam. Fractured skull.
Miner	Rouyn, Que.	About Jan. 20	43	Injured in mine.
Miner	Near Rouyn, Que.	About Jan. 20	.....	Crushed by falling rock.
Miner	Sherridon, Man.	Jan. 29	30	Crushed under pipe which fell from clamp. Died Jan. 31.
Miner	Frood, Ont.	Feb. 4	24	Crushed by fall of rock.
Miner	Frood, Ont.	" 4	.....	
Miner	Frood, Ont.	" 10	24	Crushed by fall of rock. Died Feb. 12.
Miner	Near Stewart, B.C.	" 15	22	Perished on mine trail during cold weather.
Mucker	Sherridon, Man.	" 23	23	Crushed under car of steel when it dumped. Fractured skull.
Crusher feeder	Worthington, Ont.	" 24	33	Silicosis. Laid off Sept. 19, 1923.
Machine runner	Kirkland Lake, Ont.	" 25	35	Injured by explosion from drilling into cut off hole.
Worker in nickel refinery.	Port Colborne, Ont.	Mar. 1	21	Electrocuted when he came in contact with high power wire.
Miner	Kirkland Lake, Ont.	" 1	26	Skull fractured from premature explosion during blasting operations.
Miner	Britannia Tunnel Camp, B.C.	" 7	49	Struck by falling rock.
Prospector	Near Cobalt, Ont.	" 7	.....	Burned in fire which destroyed his cabin.
Driller	South Porcupine, Ont.	" 10	32	Fell to bottom of winze while riding in bucket.
Shaft miner	Anyox, B.C.	" 13	38	Slipped from bucket and fell down shaft.
Mine worker	Rouyn, Que.	" 16	35	Crushed between locomotive and freight car.
Mine worker	Sherridon, Man.	Mar. 17	41	Burned in fire which destroyed boarding house.
Miner	Near Princeton, B.C.	" 17	31	Injured by fall in mine.
Driller	Kirkland Lake, Ont.	" 19	31	Explosion from drilling into missed hole.
Deckman	Near The Pas, Man.	About Mar. 20	.....	Fell down mine shaft.
Worker in smelting plant.	Trail, B.C.	Mar. 25	44	Crushed when pile of concentrates fell on him.
Labourer	Copper Cliff, Ont.	" 25	30	Struck and run over by train.
Miner	Near Kimberley, B.C.	" 27	42	Crushed by fall of rock.
Miner	Copper Mountain Mine, B.C.	About Mar. 28	32	Fell in mine.
Labourer	Timmins, Ont.	Mar. 31	47	Silicosis. Laid off May 22, 1926.
Coal-Mining—				
Miner	Greenwood, N.S.	Jan. 16	52	Burned by explosion at mine. Died Jan. 22.
Miner	Near Minto, N.B.	" 17	46	Buried in mine cave-in.
Miner	Thorburn, N.S.	.....	About 53	Burned by explosion of gas in mine. Died Jan. 23.
Chain runner	New Waterford, N.S.	Jan. 20	20	Struck by run away trip.
Miner	Hillcrest, Alta.	Jan. 24	46	Crushed by fall of rock.
Miner	Stellarton, N.S.	" 31	31	Jammed between coal boxes.
Miner	Blairmore, Alta.	Feb. 7	33	Crushed by fall of coal.
Miner	Nanaimo, B.C.	" 17	41	Crushed by fall of coal.
Miner	New Waterford, N.S.	" 19	28	Crushed by fall of stone.
Brusher	Thorburn, N.S.	" 27	42	Struck by fall of rock.
Miner Miner	Springhill, N.S.	Mar. 8 " 11	65 27	Caught under fall of stone.
Miner	Michel, B.C.	" 17	45	Crushed when mine timbers caved in.
Miner	Fernie, B.C.	" 17	.....	Crushed by fall of coal.
Slopeman	New Waterford, N.S.	" 28	19	Struck by run away coal box.
Non-metallic mineral, mining and quarrying, n.e.s.—				
Driller	Turner Valley, Alta.	Jan. 6	.....	Explosion of water tank when he attempted to thaw ice in it.
Worker at oil well	Near Calgary, Alta.	Mar. 19	35	Killed when separator exploded.
Foreman	Thetford Mines, Que.	" 24	41	Killed by dynamite explosion.
Labourer	Thetford Mines, Que.	" 28	24	Run over by small car.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRYING—*Con.*				
Structural materials—				
Worker in gravel pit.	Near Calgary, Alta.	Jan. 22	49	Buried by cave-in of gravel.
Gravel pit worker...	Poplar Point, Man.	About Jan. 25	About 25	Buried in cave-in in gravel pit.
Quarry worker.	Near Jordan, Ont.	Feb. 3	28	Injured during blasting operations. Died Feb. 7.
Labourer in sand pit.	Shenkston, Ont.	" 25	70	Struck by lump of rolling sand. Died Mar. 4.
Worker in gravel pit.	Near Riceville, Ont.	Mar. 6	.....	Crushed under slide of frozen gravel.
Gravel pit worker...	Burford, Ont.	" 21	32	Crushed by gas shovel when housing of engine swung.
MANUFACTURING—				
Vegetable foods, drink and tobacco—				
Janitor at bakery.	Victoria, B.C.	Jan. 13	70	Fell down stairs, fracturing skull.
Worker with Malt Co.	Montreal, Que.	" 19	40	Injured when his clothing became entangled in belt of machine.
Baker.	Nanaimo, B.C.	Feb. 4	55	Caught in dough mixer. Died Feb. 5.
Mill worker.	Galt, Ont.	" 20	42	Fell down elevator shaft. Died Mar. 7.
Mill worker.	Whitevale, Ont.	Mar. 8	73	Fell into river and drowned.
Animal foods—				
Worker with packers	Toronto, Ont.	Jan. 1	54	Poisoned by ammonia fumes when valve on compressor blew out. Died Jan. 13.
Worker in cheese and butter plant.	Sussex, N.B.	" 20	46	Fell and struck head on revolving fly wheel of a gasoline engine. Fractured skull.
Watchman at cannery.	Prince Rupert, B.C.	Mar. 24	64	Burned by explosion from lighting fire with gasoline.
Rubber products—				
Service man.	Hamilton, Ont.	Mar. 11	21	Injured when he fell into feed roll. Died Mar. 13
Saw and planing mill products—				
Labourer.	Quebec, Que.	Jan. 16	44	Scalded when he fell into boiler of hot water. Died Jan. 30.
Operator of wood cutting machine.	Dalesville, Que.	Feb. 6	19	Injured when circular saw burst. Died Feb. 7.
Farmer employed on wood cutting machine.	Near Three Rivers, Que.	About Feb. 7	44	Caught in belt and thrown on circular saw.
Accountant at lumber mill.	Newton, B.C.	About Feb. 10	57	Asphyxiated when trapped in fire that destroyed office building.
Farmer operating circular saw.	Near Humboldt, Sask.	Feb. 14	21	Cut by circular saw.
Mill worker.	New Westminster, B.C.	" 16	51	Fell in saw dust bin—fractured skull.
Fireman.	Near Sunny Brae, N.S.	" 21	41	Injured when boiler exploded.
Shingle mill worker	Near Coquitlam, B.C.	" 25	56	Burned in fire at mill.
Worker in lumber mill.	Ladner, B.C.	" 26	58	Burned by explosion from pouring kerosene on fire.
Operator of wood cutting machine.	Montreal, Que.	" 26	22	Struck by piece of metal from fly-wheel of sawing machine.
Labourer.	Welland, Ont.	" 26	40	Injured when his coat became caught in machinery.
Teamster.	Lindsay, Ont.	Mar. 4	45	Thrown from sleigh load of lumber. Fractured skull.
Stationary engineer.	Pakenham, Ont.	" 10	65	Scalded when boiler exploded.
Night watchman.	Vancouver, B.C.	About Mar. 10	45	Slipped from gangway and drowned.
Labourer transporting bark.	Val David, Que.	Mar. 14	12	Crushed underneath sleigh.
Mill worker.	Fort St. James, B.C.	About Mar. 15	.....	Struck by flying piece of saw when it burst.
Mill worker.	Trenton, Ont.	Mar. 21	51	Caught in shaft when he fell from ladder.
Mill worker.	Sudbury, Ont.	" 29	16	Overcome by smoke from fire of shavings in bin.
Wood products—				
Asst. fireman with furniture mfrs.	Woodstock, Ont.	Jan. 6	68	Heart failure while shovelling ashes.
Worker in wood preserving plant.	Calgary, Alta.	Feb. 20	26	Telephone pole fell on him while being loaded on wagon.
Pulp, paper and paper products—				
Labourer.	Kapuskasing, Ont.	Jan. 28	57	Pile of coal slid on him while loading sleigh with coal.
Labourer.	La Tuque, Que.	Feb. 1	20	Head crushed against wall while installing heater.
Beaterman.	Hull, Que.	" 3	55	Leg injured by beater lever—infection. Died Mar. 25.
Machine tender foreman.	Cornwall, Ont.	" 6	44	Caught in pulley while throwing belt off. Fractured skull. Died Feb. 13.
Mill worker.	Donnacona, Que.	" 24	35	Struck by belt when it broke.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—*Conc.*				
Pulp, paper and paper products—Conc.				
Labourer	Dryden, Ont.	" 27	33	Struck on head by falling stick of pulp wood. Fractured skull.
Mill worker	Dalhousie, N.B.	Mar. 6	19	Caught in back reel of paper machine.
Crane operator	Brooklyn, N S.	" 15	29	Burned by explosion of anti-freeze in radiator of tractor.
Iron, steel and products—				
Door luter	Sault Ste. Marie, Ont.	Jan. 19	38	Fell from platform and run over by locomotive.
Worker in steel car factory.	Hamilton, Ont.	" 30	32	Struck by train.
Worker in motor factory. factory.	Oshawa, Ont.	Feb. 5	28	Crushed by chain when it fell on him.
Labourer with Structural Steel Co.	Hamilton, Ont.	" 10	64	Fell from ladder when it gave way. Died Mar. 16.
Packer with iron and wire factory.	London, Ont.	" 11	63	Ran sliver of lumber in finger. Blood poison. Died Feb. 17.
Electrician	Hamilton, Ont.	" 14	40	Fell from crane.
Labourer	Sydney, N.S.	Mar. 16	46	Crushed between car and beam.
Polisher	London, Ont.	" 17	57	Poisoned by acid fumes while dipping bronze castings. Died Mar. 18.
Electrician	Hamilton, Ont.	" 22	45	Electrocuted by short circuit while cleaning plates of oil switch.
Worker in stove and enamelware factory.	London, Ont.	" 27	31	Pneumoconiosis. Laid off Feb. 19, 1930.
Worker in motor plant	Montreal, Que.	" 27	42	Injured when drying furnace exploded.
Non-ferrous metal products—				
Labourer with aluminum mfrs.	Arvida, Que.	" 8	37	Head caught in belt shaft.
Engineer at silverware mfg. plant.	Toronto, Ont.	Mar. 8	71	Scalded when he opened exhaust valve on boiler. Died Mar. 9.
Non-metallic mineral products—				
Machinist in explosives plant.	McMasterville, Que.	Jan. 9	46	Operation for hernia following strain. Died Feb. 8.
Worker at glass plant	Winnipeg, Man.	About Jan. 25	30	Crushed under cave-in of sand pile.
Boilermaker's helper with oil refinery.	Sarnia, Ont.	Jan. 29	29	Struck on head by planking falling from scaffold.
Painter at oil refinery	Sarnia, Ont.	Mar. 2	62	Pneumoconiosis. Laid off June 29, 1929.
Watchman at leak in gas main.	Montreal, Que.	" 9	43	Injured by gas explosion.
Worker at gas plant..	Toronto, Ont.	" 21	73	Crushed by freight elevator.
Chemical and allied products—				
Operator with acid mfrs.	Shawinigan Falls, Que.	Jan. 16	27	Asphyxiated by acid fumes from still he was cleaning.
Chemist	Vancouver, B.C.	Feb. 18	.....	Drank glass of poison in mistake for water.
CONSTRUCTION—				
Buildings and structures—				
Carpenter	Saskatoon, Sask.	Jan. 2	48	Jammed between elevator and wall.
Messenger for contractors.	Montreal, Que.	" 7	15	Knocked off bicycle by auto.
Ironworker	Sudbury, Ont.	" 10	29	Slipped and fell off roof—fractured skull.
Handyman	Montreal, Que.	" 18	55	Fell from scaffold when it broke, striking head on steel beam.
Assistant foreman	Montreal, Que.	" 20	35	Fell down elevator shaft.
Mucker	Toronto, Ont.	" 21	.....	Injured while working under compressed air.
Painter	Belleville, Ont.	" 30	21	Electrocuted when he came in contact with high voltage wire.
Worker on elevator construction.	Sorel, Que.	" 31	19	Fell from beam fractured skull.
Labourer	Selkirk, Man.	Feb. 8	39	Fell in stair hole. Fractured skull. Died Mar. 5.
Labourer Labourer	Copper Cliff, Ont.	" 14	32 39	Injured from explosion of putty tank.
Foreman on roof repairing.	Ville St. Pierre, Ont.	" 17	56	Fell from roof.
Carpenter	Quebec, Que.	" 21	.....	Struck by descending elevator.
Farmer repairing barn.	Near L'Avenir, Que.	" 22	31	Pinned beneath barn when it collapsed. Died Mar. 7.
Carpenter	Ottawa, Ont.	" 28	49	Fell from scaffold when it collapsed—fractured skull. Died Mar. 1.
Labourer	Riverside, Ont.	Mar. 7	21	Fell from scaffold. Died Mar. 15.
Labourer Labourer	Montreal, Que.	" 17	41 28	Fell down elevator shaft when thin planking broke

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Buildings and structures—Con.				
Carpenter	Vancouver, B.C.	" 18	54	Heavy plank fell on his head.
Worker with wrecking Co.	Stratford, Ont.	About Mar. 24	29	Crushed under collapse of wall.
Labourer	Verdun, Que.	Mar. 25	65	Crushed under wall when it collapsed.
Labourer	Toronto, Ont.	" 29	35	Fell down elevator shaft-fractured skull.
Railway—				
Rock worker	Near Nelson, B.C.	Feb. 13	34	Crushed by large rock while adjusting chain.
Highway and bridge—				
Labourer	Toronto, Ont.	Mar. 4	About 60	Struck by log which fell when crane prongs slipped as it was being unloaded from flat car.
Labourer	Sudbury, Ont.	" 6	46	Struck by falling rock, fracturing skull.
Labourer	Provincial Highway, B.C.	" 17	53	Struck by rock slide on April 20, 1925.
Bridge repairman	St. George de Beauce, Que.	" 18	55	Injured when he fell from bridge on ice. Died Mar. 23.
Miscellaneous—				
Foreman on power development.	Great Falls, Man.	Jan. 11	33	Crushed under compressor while it was being loaded.
Labourer on power dam construction.	Cedar Rapids, Que.	About Jan. 17	26	Struck by descending car.
Labourer on air port construction.	Near Trenton, Ont.	Jan. 18	23	Injured during blasting operations.
Diver on coffer dam construction.	Rivière aux Outardes, Que.	" 27	30	Drowned when he fell from ladder and was trapped under water by coffer dam.
Worker on canal construction.	Near Welland, Ont.	" 27	50	Clothing became caught in belt of pump.
Labourer with power construction co.	Calgary, Alta.	" 29	60	Injured when truck in which he was riding to to work overturned.
Labourer on dam construction.	Chicoutimi, Que.	Feb. 14	23	Slipped and fell while operating derrick-fractured skull.
Labourer on dam construction.	Near Vancouver, B.C.	" 22	43	Explosion of dynamite.
Labourer on dam construction.			39	
Labourer on dam construction.			24	
Worker on canal construction.	Burlington, Ont.	" 24	26	Fell into cog wheels of steam shovel.
Worker at filtration plant construction.	Ottawa, Ont.	Mar. 6	44	Injured during blasting operations.
Mechanic on sewer construction.	Montreal, Que.	" 12	29	Injured hand. Infection. Died Mar. 18.
Worker on drydock construction.	Kingston, Ont.	" 14	28	Boom of derrick fell on him.
Worker on transmission line construction.	Near Edmonds, B.C.	" 18	42	Premature explosion while removing stumps.
Worker on power dam construction.	Near Prince Rupert, B.C.	" 26	72	Drowned when their boat capsized in swollen stream.
Worker on power dam construction.			30	
Worker on power dam construction			42	
Worker on power dam construction.			37	
Electric light and power—				
Lineman	Near Nairn, Ont.	About Jan. 13	19	Electrocuted when he came in contact with high tension wire. Died Jan. 18.
Lineman	Oxbow, Sask.	About Jan. 30	48	Fell and crushed beneath pole on which he was working when it broke off.
Power house worker	Winnipeg, Man.	Mar. 23	20	Caught in governing belt.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways—				
Section foreman	Millidge, Ont.	Jan. 4	46	Collision of engine with hand car.
Brakeman	Romeo, B.C.	" 9	28	Struck by engine.
Engineer	Winnifred, Alta.	" 12	41	Fell from engine fracturing skull.
Section foreman	Brazeau, Alta.	" 18	49	Struck by engine.
Labourer	Hamilton, Ont.	" 18	.....	Struck by train.
Foreman at car repair shop.	Sydney, N.S.	" 21	35	Run over by train of freight cars.
Sectionman	Near Red Deer, Alta.	" 21	.....	Struck by train.
Carman	Chipman Siding, N.B.	Feb. 1	34	Struck by train.
Engineer	Revelstoke, B.C.	" 1	44	Slipped and fell under train.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1930—*Continued*

Trappers. Trapper	Willow Narrows Lake, Ont.	Nov. 1	.....	Drowned from canoe.
Trapper	Near Prince Albert, Sask.	Dec. 5	24	Perished in blizzard when lost in bush.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining—				
Treaterman	Trail, B.C.	April 8	26	Electrocuted while investigating ground in treater
Skiptender	Creighton Mine, Ont.	June 15	41	Struck by bar following fall of muck in chute. Died Feb. 3, 1930.
Labourer	Timmins, Ont.	Dec. 21	43	Silicosis. Incapacitated since June 5, 1926.
Driller	Kirkland Lake, Ont.	Dec. 29	35	Struck by falling bucket.
MANUFACTURING—				
Vegetable foods, drink and tobacco—				
Labourer with sugar refiners.	Wallaceburg, Ont.	May 6	.....	Sugar bags fell on him from pile, when he was loading them on truck. Died Jan. 14, 1930.
Labourer with beverage mfg. co.	Halifax, N.S.	Oct. 11	19	Fell down elevator shaft. Died Dec. 28.
Saw and planing mill products—				
Filer	Northumberland Co., N.B.	Nov. 13	68	Infected thumb. Died Nov. 25.
Labourer	Fournier Township, Ont.	Nov. 29	57	Hand injured when caught in log carriage. Blood poisoning. Died Dec. 9.
Saw operator	Huntsville, Ont.	Dec. 18	.....	Skull fractured when power saw broke.
Pulp, and paper products—				
Labourer	Westfort, Ont.	June 15	35	Struck by steel rail when it was being loaded on flat car.
Towerman	Tapanie Farm, Que.	Sept. 7	29	Gunshot wound in hand. Died Feb. 13, 1930.
Labourer	Ottawa, Ont.	Dec. 21	63	Piece of pulp wood fell on him while loading wagon. Died Feb. 9, 1930.
Printing and publishing—				
Asst. garageman with printers and publishers.	Toronto, Ont.	Dec. 30	58	Overcome by carbon monoxide gas.
Iron, steel and products—				
Typesetter with auto manufacturers.	Oshawa, Ont.	Dec. 19	23	Infection from scratched nose. Died Dec. 26.
Non-ferrous metal products—				
Press operator at supplies plant.	Toronto, Ont.	Dec. 12	.....	Finger crushed by die while operating press. Died Jan. 10, 1930.
Non-metallic mineral products—				
Marble setter	Toronto, Ont.	Aug. 3	50	Stoneworker's phthisis. Laid off April 1, 1929.
Labourer with plaster manufacturers.	Windsor, Ont.	Dec. 24	63	Bag of plaster fell on him. Fractured spine. Died Feb. 14, 1930.
ELECTRIC LIGHT AND POWER				
Lineman	Venice, Que.	Dec. 12	28	Fell 15 feet from pole on to a rod. Died Dec. 14.
CONSTRUCTION—				
Buildings and structures—				
Labourer with plumbers.	Joliette, Que.	Sept. 13	62	Struck by auto while descending from his cart.
Plasterer	Montreal, Que.	Oct. 23	58	Fell from scaffold when plank broke. Died Feb. 14, 1930.
Electrician	Restigouche Co., N.B.	Nov. 29	36	Electrocuted when he fell over live wire.
Labourer	Montreal, Que.	Dec. 11	28	Struck by falling brick—fractured skull. Died Dec. 23.
Labourer	St. John Co., N.B.	" 13	60	Fell from staging—fractured skull.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1929—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Miscellaneous—				
Teamster with contractor engineers.	Beaurivage River, Que.....	Nov. 9	28	Pneumonia from exposure. Dies Nov. 27.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways—				
Signal maintainer....	Smithville, Ont.....	Oct. 19	49	Injured when his car jumped track. Died Mar. 18, 1930.
Street and electric railways—

IMMIGRATION TO CANADA DURING THE FISCAL YEAR ENDED MARCH 31, 1930

THE accompanying tables, compiled from information supplied by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the fiscal year ended March 31, 1930, with some comparative figures for the previous fiscal year. Out of a total of 163,288 immigrants, 64,082 or 39 per cent were British, 30,727 or 19 per cent were from the United States and 68,479 or 42 per cent were from other countries.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Relation of Courts to Compensation Commission in Quebec

The question of the relation of the Superior Court to the Workmen's Compensation Commission of the Court of Quebec was again before the Courts during the past month. The last previous case involving a discussion of this relationship was noted in the LABOUR GAZETTE, July, 1929, Mr. Justice Surveyor having ruled in that case that the awards of the Commission might be challenged in the Court on the ground of jurisdiction, but not on the ground of fact.

In the case recently heard a widow petitioned the court to confirm an award by the Commission of $6,000 in compensation for the death of her husband. The Canadian National Railways, as employer, opposed the petition. It was pointed out on behalf of the railway company that on the question of homologation of awards of the Commission, the new Workmen's Compensation Act states that such awards may be homologated if the court deems proper. From the wording of the Act there is an inference that if the court thinks the award is good, then it should homologate, but, if not, homologation should be refused. In any case, before acting in either direction, it would be necessary for the court to examine the record of the case as it appeared before the Workmen's Compensation Commission, since it would be impossible to render a judgment without having knowledge of the facts.

On behalf of the petitioner it was submitted that the courts have no jurisdiction to inquire into cases passed upon by the Workmen's Compensation Commission. By a clause of the new law it is provided that there shall be no appeal from the Commission's decisions either by way of writ or prohibition, *certiorari* or *mandamus*. In such circumstances, it was claimed, the courts had not discretion but to homologate awards when petitions in that connection were laid before them. Under the law, the finding of the Commission is made final and the courts have no right to examine the record.

Mr. Justice Coderre, who heard the case, stated that any objections of the Company to the granting of the petition should be set out in detail and that the court should take for granted that the proceedings were valid before the Workmen's Compensation Commission unless such objections were specified.

Directors of Bankrupt Company Continue Liable for Wages

A company, incorporated under the Companies Act of Ontario (Revised Statutes of Ontario, 1927, chapter 218), was adjudged bankrupt; a receiving order was made against it and a custodian of the bankrupt estate appointed. The company was then indebted to a large number of its employees for wages —in no case exceeding the wages for one year—incurred for services performed during the time the defendants were such directors. Claims for these wages were filed with the trustee in bankruptcy, and all except that of the plaintiff were assigned by the claimants to him, and notice of the assignment was given to the defendants. One of the employees sued to recover from the directors of the company the total of these claims, and his own claims, which he placed at $4,582.73. The defendants denied liability, pleading section 100 (1) of the Companies Act, which declares that:

The directors of a company shall be jointly and severally liable to the labourers, servants and apprentices thereof for all debts not exceeding one year's wages due for services performed for the company while they are such directors respectively.

Subsection 2 declares that:—

A director shall be liable under subsection 1 unless,

(*a*) the company has been sued for the debt within one year after it has become due and execution has been returned unsatisfied in whole or in part; or

(*b*) the company has, within that period, gone into liquidation or has been ordered to be wound up and the claim for such debt has been duly filed and proven, nor unless he is sued for such debt while a director or within one year after he has ceased to be a director.

In the Ontario Supreme Court, Mr. Justice Kelly, in giving judgment, stated the more important questions at issue to be: (1) whether the defendants continued to be directors after the commencement of the bankruptcy proceedings; and (2) whether they were such while they were such directors or within one year after they ceased to be such. On these questions his Lordship stated, in part, as follows:—

"An authorized assignment under the Bankruptcy Act is not necessarily a winding-up. Nor in the case of a company debtor does it put an end to the company, which really continues in existence, though the scope of its activity is limited because of its inability to carry on its business. Its corporate existence still continues. On the making of a receiving

order the debtor's property affected by it is deemed to be in the custody of the Court, and on a trustee being appointed as provided by the Act it forthwith passes to and vests in such trustee. The purpose of this is that it may be disposed of or otherwise administered so as to go in liquidation of the debtor's debts. From several sections of the Bankruptcy Act the inference is that it was not intended that, in the case of a company debtor, a company's existence should come to an end; but indeed the contrary. . . .

"Then again, the inference to be drawn from ss. 229 and 230 of the Companies Act is that, even in winding-up proceedings, a company is regarded as still in existence down to the time that its affairs are fully wound up; for the liquidator, on that happening, is required to call a general meeting of the shareholders or members of the corporation for the purposes therein named, which meeting shall be called in the manner provided by the by-laws for calling general meetings, and the liquidator is further required to make to, and file with, the provincial secretary, a return of such meeting having been held and the date thereof; and at the expiration of three months from the date of the filing the corporation shall *ipso facto* be dissolved. Notwithstanding this provision, however, the Court may, at any time after the affairs of the corporation have been fully wound up, make an order dissolving the corporation, which shall be dissolved at and from the date of such order. These would be useless provisions if the company had already ceased to exist. . . .

"The company having, therefore, continued in existence, it remains to be determined whether the defendants ceased to be directors. There is no evidence of their resignation or of any act either of theirs or of the company putting an end to their position as directors. On their own evidence, they had no business communications with the company and there was no meeting of the directors subsequent to the assignment in bankruptcy; and there is no evidence that they took any steps to resign or otherwise discharge themselves from their obligations as directors.

"In my opinion, they have not ceased to be directors, though their powers were curtailed by the bankruptcy proceedings. The plaintiff is entitled to judgment for the amount asked in the notice of motion, namely, $4,478.86, with interest from the commencement of the action (August 4, 1928) and costs.

(The foregoing judgment was subsequently affirmed by the Appellate Division of the Ontario Supreme Court—*Ontario Weekly Notes,* April 25, 1930, page 144).

Davey versus *Gibson* (Ontario), 1930, 2. *Dominion Law Reports, page* 139.

Proceedings under Combines Investigation Act declared "absolutely privileged"

A judgment delivered by Mr. Justice Orde on May 5, 1930, in *O'Connor v. Waldron,* declares that proceedings before a commissioner appointed under the Combines Investigation Act are absolutely privileged, and that commissioner, counsel, witnesses and parties are entitled to the same protection as in a court of law.

The judgment was made on a motion of Mr. Gordon Waldron, K.C., to dismiss an action brought against him by Mr. W. F. O'Connor for slander during the investigation under the Combines Investigation Act into the Amalgamated Builders' Council (LABOUR GAZETTE, February, 1930, page 145.) The ground for the motion was "that the defendant was absolutely privileged on the occasion on which it is alleged he spoke the words complained of."

In his reasons for judgment, Mr. Justice Orde said:

"The rule of law as to the defence of absolute privilege is well settled. . . . . As put by Kelly, C.B., in *Dawkins v. Lord Rokeby* (1873), L.R. 8 Q.B. 255, at p. 263: 'The authorities are clear, uniform and conclusive that no action of libel or slander lies, whether against judges, counsel, witnesses or parties, for words written or spoken in the ordinary course of any proceeding before any court or tribunal recognized by law.'

"This rule of law is not designed for the personal protection of the judge or counsel or witness or party. It is founded on public policy in order that those engaged in the administration of justice may proceed unhampered by the fear that some unguarded or hasty statement might subject them to an action for defamation. And in order to afford that protection and guarantee that freedom from restraint the rule is made applicable even when the defamation is deliberate or there is actual malice. Were it not so, the privilege would be merely qualified and not absolute. As put by Fry, L. J., in *Munster v. Lamb* (1883), 11 Q.B.D. 588, at p. 607, 'It is not a desire to prevent actions from being brought in cases where they ought to be maintained that has led to the adoption of the present rule of law; but it is the fear that if the rule were otherwise, numerous actions would be brought against persons who were merely discharging their duty.'" . . . .

"It is equally well established that the rule applies not only to proceedings before an ordinary Court of Justice whether it be a superior or inferior Court of Record or an inferior Court not of Record (with some qualification where a judge of an inferior Court knowingly acts beyond his jurisdiction),

but to proceedings before a tribunal recognized by law, which though not a Court in the ordinary sense of the word, exercises judicial functions, that is, acts in a manner similar to that in which a Court of Justice acts in respect of an inquiry before it. *Gatley,* 2nd ed., p. 200. The only question here is whether or not the proceedings had before the defendant during the course of his inquiry or investigation by virtue of his commission fall within this category. If they do, he is entitled to the protection afforded by his plea of absolute privilege. If not, the action must go on to trial.

"I am clearly of the opinion, having regard to the nature of the defendant's Commission and the purposes for which it was issued and to the Statutory provisions designed to accomplish those purposes, that the proceedings before the defendant were absolutely privileged." . . . .

"The defendant, in my judgment, was clearly performing judicial functions in carrying out the objects of his commission. By sec. 16 of the Combines Investigation Act, he had authority to investigate the business of any person named in the Order in Council appointing him, and to enter and examine the premises, books, papers and records of such person. By sec. 22 he was empowered to order the attendance of witnesses for examination upon oath and the production of documents, and to 'exercise for the enforcement of such orders or punishment for disobedience thereof, all powers that are executed by any Superior Court in Canada for the enforcement of subpœnas to witnesses or punishment of disobedience thereof.' Section 33 gives power to preserve order by immediate punishment for contempt in the face of the Commissioner. In addition to the foregoing, the Commissioner was clothed with all the powers conferred upon a Commissioner under the Inquiries Act.

"Keeping in mind the underlying principle of the rule as to absolute privilege that it is designed not for the protection of the individual, but as a matter of public policy in order to allow freedom of speech not only to the members of the tribunal but to counsel, witnesses and parties, it would be inconvenient, if not practically impossible to conduct an inquiry under the Combines Investigation Act in the public interest if the proceedings are not protected by the rule. It is not merely the Commissioner who is to be considered, but counsel, witnesses and parties. Absolute privilege cannot be denied to one and granted to the others, and it would clearly not be in the public interest if witnesses or counsel appearing before a Commissioner under the Act were to be hampered in what they might say during the course of the proceedings by the fear of a possible action for slander. If counsel and witnesses are entitled to that protection, then this Commissioner must be also." . . .

"It was further argued that the Combines Investigation Act was *ultra vires* of the Dominion Parliament. If this question were really before me, I could not properly consider it until the Attorney-General of Canada had been notified. That would be a futile proceeding for the simple reason that the Act has been held by the Supreme Court of Canada to be valid, re *Combines Investigation Act,* etc. (1929) S.C.R. 409. That decision is, of course, binding upon me and I am not called upon to consider the possibility of its reversal by the Privy Council upon the appeal which I am informed is now pending.

"I must therefore hold that the proceedings before the defendant were absolutely privileged and there will be judgment dismissing the action with costs, including the costs of this motion."

Federal Trade Unions Act declared Ultra Vires

The Trade Unions Act, which was passed in 1872, was declared to be *ultra vires* of the Dominion Parliament in a judgment handed down by Mr. Justice Middleton on March 25, 1930 (A.B.C. v. Herman).

The question was raised through an action taken by the Amalgamated Builders' Council, an organization of plumbing and heating contractors which secured registration under the Trade Unions Act in June, 1928 (see reference to cancellation of its registration in LABOUR GAZETTE for February, 1930, p. 145). The A.B.C. entered action against W. F. Herman, owner and published of *The Border Cities Star,* for libel in connection with certain published articles bearing upon the investigation under the Combines Investigation Act into the Amalgamated Builders' Council. The defendant Herman moved to stay the action on the grounds, among other things, that owing to the cancellation of the certificate, the plaintiff had no longer any status in Court, and that in any case the Trade Unions Act being constitutionally invalid, could confer no right to sue.

In his reasons for judgment, Mr. Justice Middleton contrasted the British Trade Union Act of 1872, which has been frequently amended in vital particulars, with the Canadian Act of 1872, which has never been changed. "This is of great importance," the

Court stated, "in contrasting the situation under the English Act with the situation under the Dominion Act for, as a writer upon the subject in 1913 states, the changes made in the Act after the decision of the Taff-Vale case in 1901 have been so radical and drastic that not only that decision but all the law on this topic, save the decisions of recent years, is in England obsolete.

"It is also to be borne in mind that the English Statute is enacted by an omnipotent legislature, while the Canadian Act was passed by Parliament which has no jurisdiction over property and civil rights save as incidental to fields of legislation assigned to the Dominion.

"The English Act of 1871 has as its leading provision the enactment (Sec. 2) that the purpose of any trade union shall not by reason merely that they are in restraint of trade be deemed to be unlawful so as to render any member of such trade union liable to criminal prosecution for conspiracy or otherwise.

"The third section provides that the purpose of any trade union shall not by reason merely that they are in restraint of trade be unlawful so as to render void or voidable any agreement of trust." . . . .

"The Canadian Act while based on the English Act has important matters of difference. The provisions relieving trade unions from illegality by reason of the agreement being in restraint of trade find a subordinate place in this Act. They are also found in the Criminal Code. In the Code there is a provision, sec. 498, which makes it an offence to combine or agree with any other person to unduly limit facilities for transporting, producing, manufacturing, supplying or dealing in any article or commodity which may be a subject of trade or commerce, or to lessen the manufacture or production of any such article or commodity, or to unreasonably enhance the price thereof, or to unduly prevent or lessen competition in the production, manufacture, purchase or supply of any such article or commodity, but by Subsec. 2 it is provided that these provisions shall not apply to combinations of workmen or employees for their own reasonable protection, and by Sec. 497 it is enacted that the purposes of a trade union are not, by reason merely that they are in restraint of trade, unlawful within the meaning of the preceding Sec. 496, which defines as a conspiracy in restraint of trade an agreement between two or more persons to do or procure to be done any unlawful act in restraint of trade. This is of great importance from the constitutional viewpoint, because it renders unnecessary to consider whether the provisions of the Trades Union Act are capable of being supported by reference to the criminal law. The provisions deemed proper for the protection of trade unions from the harsh operation of the criminal law are found in the Criminal Code and not in the Trade Unions Act."

Mr. Justice Middleton completes his analysis of the British and Canadian statutes by quoting "Cotter v. National Union of Seamen (1929) 2 Ch. 58, where the words of Lord Justice Farwell in the Osborne case (1909) 1 Ch. 191 are quoted with approval:—

'A registered trade union is thus a statutory legal entity anomalous in that although comprised of a fluctuating body of individuals and not being incorporated it can own property and act by agent.'

He adds: "I do not at all agree with Mr. O'Connor that this 'anomalous entity' is a 'judicial person.' It is I think far less."

"This analysis of the Acts makes it plain to me that the Dominion Act is nothing but a statute dealing solely with property and civil rights and therefore *ultra vires* and for that reason quite ineffectual to confer any valid status upon the trade union. See what is said by Duff, J. in Starr v. Chase 1924 S.C.R. 495 at p. 508:—

'As to many of its provisions there is, to say the least, doubt as to the authority of the Dominion to enact them.'"

No final word is said upon the question "whether a registered trade union can sue for libel." Gatley is quoted as saying "that a union should be held entitled to maintain an action for libel in respect of any words which tend unjustly to affect its property or its financial position"; but in the present case it is held that "the words complained of here do not affect the property or the financial position of the plaintiff."

The Court made an order "forever staying the action and directing the plaintiff to pay the costs of the defendant."

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed a considerable improvement at the beginning of May, according to returns received by the Dominion Bureau of Statistics from 7,208 firms, each employing a minimum of 15 workers and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 976,224 persons, as compared with 944,754 in the preceding month. The employment index (with the average in the calendar year 1926, as the base equal to 100) stood at 111.4, as compared with 107.8 on April 1, and with 116.2, 106.8, 101.8, 95.4, 91.9, 92.9, 92.5, 84.3, and 85.1 on May 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The situation was thus more favourable than in the spring of any other recent year except 1929.

At the beginning of May, 1930, the unemployment percentage reported to the Department of Labour by local trade unions stood at 9.0 contrasted with 10.8 per cent of idleness at the beginning of April, and with 5.5 per cent at the beginning of May, 1929. The May percentage was based on the reports received by the Department from 1,719 labour organizations with an aggregate membership of 206,326 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a considerable increase, particularly in services and farming, in the volume of business transacted by these offices during April, when compared with the business of the previous month, but a marked decline was recorded from that of April, 1929, all industrial divisions showing declines under the latter comparison.

The average cost of a weekly family budget of twenty-nine staple foods was $11.17 at the beginning of May, as compared with $11.24 for April; $10.94 for May, 1929; $10.80 for May, 1928; $10.76 for May, 1927; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $12.66 for May, 1918; and $7.42 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again slightly lower at 89.9 for May, as compared with 91.7 for April; 92.4 for May, 1929; 97.9 for May, 1928; 98.3 for May, 1927; and 100.2 for May, 1926.

The loss in working time caused by industrial disputes in Canada during May was much larger than in April, but considerably less than in May, 1929. Thirteen disputes existed at some time during the month, involving 1,824 workers, and resulting in the loss of 12,957 working days. Corresponding figures for April were: 9 disputes, 280 workers and 3,834 working days; and for May, 1929, 24 disputes, 5,106 workers, and 39,152 working days.

Industrial Disputes Investigation Act

During May the Department of Labour received reports from three Boards of Conciliation and Investigation in connection with disputes respectively between (1) the shipping interests at Halifax, Nova Scotia, and the longshoremen; (2) the Canadian Pacific Railway Company and the Canadian National Railways and their checkers on Montreal wharf; and (3) the Hydro Electric System of Winnipeg and certain of its employees. Seven new applications for the establishment of Boards were received during the month. The text of the reports, and full particulars of proceedings under the Act are given in an article commencing on page 631 of this issue.

Conciliation machinery desired by Scottish labour

The Scottish Trade Union Council, at a recent meeting at Edinburgh, adopted a report from the General Council which proposed new statutory machinery for the promotion of collective agreements. The suggestions involved the appointment in every Ministry of Labour area of a permanent conciliation officer, who, in the event of a dispute and at the request of either interested party, would form a board of conciliation, consisting of himself as chairman and

two assessors. This Board would then promote a collective agreement between the parties, and if it should fail to obtain such a result a report would be issued, the report, however, not being binding on the parties. It was suggested that this scheme would assist "in turning State intervention from a mere patching-up process into a process of improving industrial relations between employers and employed."

Work of International Labour Conferences

Reference is made on another page of this issue to the Fourteenth Session of the International Labour Conference now in session at Geneva. The wide range of subjects covered by the conventions adopted by previous conferences is shown in a recent report of the Committee of Experts, to which the Governing Body of the organization has entrusted the examination of the yearly reports submitted by the States members in accordance with Article 408 of the Treaty of Peace, setting out the steps taken by them to apply the Conventions they have ratified, which have been in force for more than a year.

This year the committee examined 287 reports, as against 223 in 1929 and 175 in 1928. The conventions to which these reports refer are 25 in number, being, in chronological order, on the following subjects:—

The eight hours' day in industrial undertakings;

Unemployment;

The employment of women before and after childbirth;

The employment of women during the night;

The minimum age for admission of children to industrial employment;

The night work of young persons employed in industry;

The minimum age for admission of children to employment at sea;

Unemployment indemnity in case of loss or foundering of the ship;

Facilities for finding employment for seamen;

The age for admission of children to employment in agriculture;

The rights of association and combination of agricultural workers;

Workmen's compensation in agriculture;

The use of white lead in painting;

The application of the weekly rest in industrial undertakings;

The minimum age for the admission of young persons to employment as trimmers or stokers;

The compulsory medical examination of children and young persons employed at sea;

Workmen's compensation for occupational diseases;

Equality of treatment for national and foreign workers as regards workmen's compensation for accidents;

Night work in bakeries;

The simplification of the inspection of emigrants on board ship;

Seamen's articles of agreement;

The repatriation of seamen;

Sickness insurance for workers in industry and commerce and for domestic servants;

Sickness insurance for agricultural workers.

New industrial standards during past ten years

The effects of the International Labour Conferences during the past ten years in raising industrial standards throughout the world, and particularly in Europe, were described in a recent address before the Manchester Statistical Society by Mr. H. M. Butler, deputy director of the Geneva Organization. "Whether," he said, "one considers hours, the conditions of employment of women and children, or the protection of workers against social risks, it is impossible to avoid the conclusion that during this period an immense advance has been made in the general wellbeing of the industrial population of the Continent. This progress has not been confined to a few of the richer and larger countries, but though differing in degree has been virtually universal in its scope. As a result, even where their real wages have not been increased, and in spite of the depression which has marked many of the post-war years in nearly every European country, millions of workers throughout Europe are considerably better off than they were before the war. Their hours of leisure are longer, their conditions of employment better, and they have an increased measure of protection against the misfortunes of life."

Mr. Butler pointed out that in the matter of the suppression of child labour, one of the most essential steps in civilization, Europe has made very great strides since the war, and has practically established a universal standard. There is now a very large measure of European uniformity in the protection of women, young persons, and children—certainly a very much larger measure than existed before the war.

In regard to hours of work also, Mr. Butler declared that there is practical uniformity of practice, most European countries having adopted the 8-hour day in some form after

the war. The Washington Hours Convention, he suggested, serves the purpose of a yardstick with which to measure working time in all industries. As to wages, Mr. Butler pointed out that the International Labour Office has done valuable work in compiling data as to "real wages" in various countries, the actual wages being reduced to the measure of their comparative purchasing power. However, of all the social developments of the last ten years, Mr. Butler considered that the most noteworthy has been in connection with the expansion of social insurance, covering the risks of unemployment, sickness and old age.

Minimum wages for women in Alberta

The Alberta Legislature at its recent session amended the Minimum Wage Act of 1925 by making the Act to apply to the province generally instead of being applicable only to the cities and towns that were enumerated in Schedule 1 of the Act (LABOUR GAZETTE, June 1925, page 566). Accordingly, on May 10, the Minimum Wage Board, under the power granted to it by Section 7 of the Act of 1925, issued an order that, commencing on July 1, 1930, Orders No. 1 to 7 inclusive, are to apply and have full force and effect universally throughout the province.

Orders 1-6 were reprinted in the LABOUR GAZETTE, August, 1925, page 777. They covered respectively female employment in (1) manufacturing industry; (2) laundries, dye works, etc.; (3) hotels, restaurants, etc.; (4) personal service occupations; (5) offices; (6) shops, stores, and mail order houses. Order No. 7, relating to the fruit and vegetable industry, was reprinted in the issue of August, 1928, page 854. An account of the legislation enacted by the provincial legislature at its late session will appear in the next issue.

Inquiry into wages of Dominion Civil Servants

The Commission appointed last year, under Order in Council P.C. 664, dated April 15, 1929, to inquire into rates of salaries, pensions, etc., of technical and professional officials of the Civil Service of Canada, having submitted a report to the Secretary of State in which they suggested further investigation of the civil service generally, the commissioners received further authority, by Order in Council P.C. 1053, dated May 16, 1930, to extend their inquiries so as to include the salaries and wages of all members of the civil service, and to consider the advisability of fixing a minimum salary for employees of the Dominion Government. This extension in the scope of inquiry was made in accordance with the suggestion of the Commission itself, whose report contained the following paragraph:—

"During the course of our inquiry we were impressed with the fact that those engaged in technical, scientific and professional work for the government, though they formed a very important branch of the civil service, were still in numbers only a moderate proportion of the total engaged in government service. The cost of government, measured by salaries or wages alone, is substantial, and the number of employees very great. Having in mind the obvious desire of the government, as indicated by the reference to us, to improve the status of its technical officers with a view to increasing the efficiency of that branch of the service, it has occurred to us that an investigation of the civil service generally, i.e., as to numbers, nature of work and rates of pay, might conceivably result in some economy and greater efficiency. We are sensible of the fact that such a work is of considerable magnitude and would involve careful scrutiny of the personnel in each department, and that it would take a considerable time, but we believe the results would more than justify the expense of such an investigation."

The Commissioners are as follows: Mr. Edward W. Beatty, K.C., president, Canadian Pacific Railway Company; Sir George Garneau, Quebec, and Dr. Walter C. Murray, LL.D., of Saskatoon.

British Columbia Male Minimum Wage Act

The *British Columbia Gazette*, May 15, 1930, contained a notice of the dates of meetings of the Male Minimum Wage Board to be held for the purpose of conducting a separate inquiry in each case into the circumstances surrounding the employment of licentiates of pharmacy, certified drug clerks, and certified drug apprentices. At the same time an inquiry will be made into the circumstances surrounding the employment of janitors, cleaners, watchmen, elevator operators, and any other occupation of a similar nature.

The meetings were held at various centres throughout the province from May 19 to June 10. It will be recalled that the application of the drug store employees was at first refused by the Board, which ruled that these employees belonged to the professional class, and were therefore not subject to the provisions of the Male Minimum Wage Act. The British Columbia Court of Appeal subsequently set aside this ruling, finding that drug store employees belonged to an "occupation"

within the meaning of the Act. This decision is outlined on another page of this issue.

The Board is composed of Messrs. James D. McNiven (chairman), Adam Bell, and George Henry Cowan, who have the powers and authorities of commissioners appointed under the Public Inquiries Act.

Fines for faulty work declared unlawful

Among the Recent Legal Decisions affecting Labour on another page of this issue, an account is given of a judgment rendered last month by Mr. Justice Farwell in the English Chancery Division declaring unlawful the practice of cotton manufacturers in imposing fines on weavers for faulty work. The secretary of the Weavers' Amalgamation commented on this judgment as follows:—

"For a number of years the council of the Union have been confronted with the fining question and problems that arise from it. It has been responsible for industrial difficulties of an acute character, strikes and lockouts having taken place arising from the objection that weavers have to the imposition of fines. Now that the action of the employer has been declared illegal in this case it will free all those who earn their livelihood as weavers from the dangers that are inherent within the system."

On the other side the Cotton Spinners' and Manufacturers' Association are stated to be considering the advisability of appealing against the judgment. They claim that fining rarely caused a dispute, and that workpeople generally prefer to pay a monetary penalty than to suffer anxiety about the probability of dismissal.

Educational work of women's institutes in Ontario

The educational work carried on by the Women's Institutes of Ontario throughout the rural districts of the Province is described in the annual report of the organization for 1929, recently published by the Ontario Department of Agriculture. It is pointed out that "Canadian women are carrying on most successfully as compared to other countries, in their rural volunteer organizations, and through co-operation with various departments of government service. Ontario was the first to set an example in general co-operation between government service and local organizations, and this plan has been successfully adopted in whole or in part in a number of countries. The interest on the part of rural women in the work of the Women's Institutes is gradually increasing, new branches being formed from time to time in various sections of the province."

The report calls attention to the demonstration lecture courses as an important branch of the work of the Institutes. Nearly 9,500 girls and women, it is stated, took advantage of systematic instruction given in the short courses in food values and cookery, home nursing and first aid, sewing and millinery. The great majority of these courses consisted of two weeks' instruction, while there were quite a number of one month's courses and a few which lasted for three months. In addition to these regular courses instruction was given in handicrafts in a few centres to girls and young women who took keen interest in making artificial flowers, parchment shades, leather work, painting in wax. As a result of this instruction in food values and cookery, there is a marked increase in the use of vegetables and greens in the rural districts and a more general appreciation of the value of milk in the diet, especially for children. Through information received from the home nursing and first aid courses, many of the girls and women who have taken the course are giving valuable aid in case of emergency where a trained nurse cannot be obtained. In some of the outlying sections of the province where doctors and nurses are so far away, this service is much appreciated. Many of the girls and women in the rural districts are now able to make their own dresses and other clothing following the instruction received from the Departmental staff.

Unemployment conference to be held this year

The "Supplementary Estimates" adopted by Parliament towards the end of the late session contained the following item:—

"To provide for a conference of representatives of Dominion and provincial governments, municipalities, transportation companies and industrial and labour associations, to consider methods of co-operation in furthering continuous employment throughout Canada during the winter months, $10,000."

The Prime Minister, in reply to a question in the House of Commons on May 29, commented on this item as follows:—

"The idea is to have the conference as representative of interested bodies likely to be affected as possible; to invite to it representatives of industrial organizations, labour organizations, as well as the leading municipalities and the provincial governments. The government recognizes, as I think I made clear when speaking on a previous occasion, that there is a problem of seasonal unemployment which occurs regularly in the Dominion, and it is believed by the administration that a conference of this kind might lead to such co-operation, as between those who have to do with work of construction and employment

generally, as will be helpful in affording more continuous employment in the winter months than would otherwise be possible."

In reply to the further question, whether the government would consider asking the provinces to inaugurate the 8-hour day for certain industries in the Dominion, Mr. King stated that the proposed conference would be free to discuss any and all aspects of the problems of employment and unemployment.

Proposed conference on unemployment insurance

The Manitoba Legislature adopted the following resolution at its recent session:—

"Resolved that whereas after an exhaustive inquiry by a committee of the Federal Government recommendation was made for the establishment of an unemployment insurance scheme for the whole Dominion; and whereas the law officers of the Crown expressed the opinion that under the British North America Act the Federal Government cannot inaugurate such a scheme; therefore be it resolved that we urge the Dominion Government to call a Dominion Provincial Conference, at which all of the Provinces will be represented, to consider the advisability of amending the British North America Act so that the Dominion Government can establish a Dominion-wide system of unemployment insurance if it so desires."

A resolution by the Alberta Legislature on the same subject was noted in the April issue, page 362. The position of the Dominion Government on the subject of unemployment insurance legislation was stated by the Prime Minister in the House of Commons on February 27 (LABOUR GAZETTE, March, 1930, page 256). An account of the legislation enacted by the Manitoba Legislature at its late session appears on another page of this issue.

The problem of the older worker in industry

Addresses delivered at the last annual meeting of the National Association of Manufacturers (United States) on the problem of "the older worker in industry", have been reprinted by the Association in pamphlet form. The director of the Industrial Relations Section of the Policy Holders' Service Bureau of the Metropolitan Insurance Company suggests that the problem is one that should be solved by industry itself. "In 1930," he says, "it is estimated that there will be 28,670,000 persons 45 years of age and over, in the United States, of which 15,120,000 will look to some gainful occupation for support. It must be evident to you, as it most assuredly is to me, that we are up against a problem in human engineering which calls for prompt and true action. Shall we continue to offer palliatives here and there, or will we attempt cures based upon knowledge? Industry can, I believe, if it will, discover the answer by research and experiment. If industry itself does not devise a plan of getting at the real truth, it is safe to presume that some other agency will, but the solution which industry could arrive at, if it had the will, would be more satisfactory to industry and probably to the country at large than the solution which might be proposed by some outside agency. . . I suggest that what is needed is that a small group of persons having knowledge of human engineering, skilled in the art of fact-finding should meet before the year is out for the purpose of devising a plan to uncover the true state of the matter. If a representative committee were organized for this purpose, I am inclined to believe that the collaboration of organizations which have worked in this field could be secured. Let this committee draw up a working plan and offer it to industry and let industry trade by trade explore, with this chart as a guide, into this almost unknown area. If this is done, I feel certain that within twelve months time the genius of American industry in human engineering will find a solution."

Clothing workers' plan to prevent unemployment

President Sidney Hillman, in his address at Toronto at the recent biennial convention of the Amalgamated Clothing Workers (reported on another page of this issue) referred to the policy followed by the Union in protecting its members against the risk of unemployment. Every agreement concluded by the Amalgamated Union since 1911 contains a clause which provides that during periods of depression in the industry the available work is to be equally divided among all the workers. Mr. Hillman declared that it was essential to have a shorter working day in order to provide general employment. An agreement between the Amalgamated Clothing Workers and the Associated Clothing Manufacturers at Toronto, which contained the clause referred to, was outlined in the LABOUR GAZETTE, August, 1922 (page 889). The clause reads as follows:—

"It is agreed that equal division of work shall be observed so far as practicable in slack seasons, and that scales of production must be observed during such seasons; and it is agreed that the manufacturers will co-operate with the Union to preserve discipline among its members in regard to their obligations to the Union.

"That in accordance with the spirit of this agreement both parties pledge themselves to co-operate in making the arrangement successful, and to use their influence and effort for the promotion and development of good-will; it being understood that it is not the intention that this agreement shall operate in any way as to restrict output, impede processes of manufacture or management, but shall encourage maximum production and minimum cost and fair and equitable treatment to any individual concerned in it."

Technological unemployment in steel industry in U.S.A.

The *American Federationist*, the monthly magazine published by the American Federation of Labour, contained a note in its issue for May, on "technological unemployment in steel." "The records of the steel industry," it is stated, "show the following variation in the number of employees between 1926 and 1929:

	Per cent		
Bessemer converters	24	fewer	in 1929
Open-hearth furnaces	8	"	" "
Puddling mills	18	"	" "
Blooming mills	9	"	" "
Plate mills	11	"	" "
Bar mills	17	"	" "
Standard rail mills	14	"	" "
Tin-plate mills	6	"	" "
Sheet mills	3	more	" "

"Since the application of electric power similar changes have been made in practically every industry. When peacetime production reached a new high level in 1929 the unemployment records of trade unions showed 9 per cent unemployed. These figures confirm labour's contention that unemployment is a constant problem. Technical progress has been steadily turning workers out of jobs. They or an equal number of workers may eventually be absorbed by the industry, but in the interim science has brought unemployment to workers.

"The American Society of Mechanical Engineers, at its Washington meeting in celebration of its fiftieth anniversary, predicted that the next immediate field of progress would be in human engineering. Here is a problem awaiting their solution—to install technical progress so that labour will not fear science."

United States Federal Farm Board

The Federal Farm Board, established in the United States a year ago, is already active in carrying out the policy of Congress as expressed in the Agricultural Marketing Act as follows: "To promote the effective merchandising of agricultural commodities in interstate and foreign commerce, so that the industry of agriculture will be placed on a basis of economic equality with other industries."

The Federal Farm Board aims at improving the farmers' marketing system, first, by helping farmers to organize into co-operative marketing associations. Second, by aiding in federating these associations into district or regional selling units, and wherever possible into national sales agencies. Third, by assisting them through loans and in developing effective merchandising programs. The Board assists farmers through collective action in controlling the production and marketing of their crops; to encourage the growing of quality crops instead of more crops; to aid in adjusting production to demand.

Circular No. 1, recently issued by the Board states that "the Federal Farm Board is working on the theory that the production of farm products in excess of normal marketing requirements is a waste. It injures the producer without benefiting the consumer. The consumer requires and should have a normal supply of food and textile products of high uniform quality. The producer desires a supply which can be sold at prices that will assure him a reasonable profit on his farm business. The development and maintenance of a condition of stability with regard to production and price will benefit both producers and consumers. Such co-ordination of supply and demand is a problem to which the farmer co-operatives must give further attention, and in the solution of which the Federal Farm Board must render all possible assistance."

The belief is stated that farmers will be able with the help of the Board, to build up a co-operative system of marketing that will reduce fluctuations in prices of farm products, and yield the farmers larger incomes, without thereby raising the prices paid by the consumers for farm products.

Congress authorized $500,000,000 to be used as a "revolving" fund. At the outset only $150,000,000 of this amount was appropriated. The board will ask for more money as it is needed. The money is loaned to co-operatives at a limited rate of interest—in no case shall the rate exceed 4 per cent per annum on the unpaid principal. Where national or central agencies exist the Federal Farm Board loans the money to them. These central or national agencies, in turn, loan the money to district or local co-operatives at a slightly higher rate of interest to cover handling charges and build up a reserve to the association against losses. Profits resulting from their operations will go to build up the reserves of the national or central, in which ownership is shared by members in proportion to their patronage

Slum clearance bill in Great Britain

The British Government recently introduced in the House of Commons a Housing Bill (No. 2) providing for financial assistance to local authorities in placing in new houses those people who have been displaced from slums. Three methods of slum clearance are provided for by the bill:—

(1) A process of entire clearance of the land in areas defined on a map, the steps to be taken being specified in the Bill. In some places this method would be very generally used.

(2) The method of "improvement areas," in which some houses would be taken and other buildings left. There is power under the Bill to prevent houses left in an improvement area from becoming more and more overcrowded.

(3) The treatment of individual houses that were little plague spots situated in areas that could not be called slums. The Bill would enable authorities to condemn such a building and prevent its being used as a dwelling.

Aeroplane medical service in Ontario

Mr. W. C. Millar, chief sanitary inspector of the Ontario Department of Health, describes in the *Canada Lumberman*, May 15, the use now made of aeroplanes in giving medical service in lumber camps in the remote parts of the province. "In the past year," he says, "several physicians who have camp contracts far inland from the railroads, have been making their trips by aeroplane. Leaving the engine running, owing to the intense cold which usually exists in the north, and to the necessity for an early hop-off, due to the high cost of aeroplane-hire, the doctor looks over the camp, attends any of its inmates who may be lying-in sick, samples the cook's coffee, then off he hops to the next camp, where the same program is followed, and he is home in time for lunch at his own table, having visited, in three hours, camps which, in past years, had taken as many days. . . . When aeroplane transportation becomes more popular, woods operators will undoubtedly insert in their contracts with their doctors a similar clause to that which Shevlin-Clarke Company, of Fort Frances, have had for many years, specifying that the contracting physician shall make his visit to each camp at a time when all employees are in either for lunch, for the close of day or on a Sunday; in this way, minor ailments (which may later become major ones) suffered by lumber-jacks, can be diagnosed and treated. . . .

"As an emergency means of transporting the doctor into far inland camps, where a contagious disease has developed, or a bad accident occurred, or for transporting a very sick or injured person out to the railhead hospital, the aeroplane is the greatest boon to all, and undoubtedly, when 'airmindedness' is more common and the cost of gratifying it less prohibitive, most of our woods contracting physicians will be taking advantage of the small aeroplane as a means of transportation on their visits to the camps, to whose employees they have contracted to supply medical and surgical care."

National Insurance in France

As already noted in the LABOUR GAZETTE (April, 1930, page 364), the Social Insurance Act enacted by the French Parliament in 1928, is to take effect on July 1, 1930. The provisions of this act were outlined in the issue of June, 1928, page 590. It provides insurance covering sickness, incapacity, old age, death, maternity, and involuntary unemployment, and establishes a system of family allowances. Insurance is obligatory for all wage earners whose incomes do not exceed a certain limit. The charges are to be covered by the imposition of an assessment totalling 10 per cent of the salary, limited to a maximum of 15,000 francs, provided the wage earner has no child. This limit is raised to 18,000 francs for the wage earner with one child, and raised by 2,000 francs for each additional child. Of this imposition, 5 per cent is to be paid by the employer and the other 5 per cent by the wage earner, the latter amount being deducted monthly by the employer from the wage and paid in by him to the State. The employer is responsible for the payment of the full assessment.

The sickness risk covers the cost of general and special medicines, hospital and special treatment expenses and surgical operations for the insured and his wife and non-salaried children of less than 16 years. During the period of pregnancy and six weeks after childbirth, the insured and his wife benefit by medical supplies and cash allowances. After sickness or illness of six months, the insured qualifies for an invalidity pension, provided his working capacity has been reduced by two-thirds. Old age pensions are guaranteed to workers who have reached 60 years, although this retirement may be put off by the insured until 65 years; the amount received annually is regulated by the assessment al-

ready paid by the individual. At death, the nearest relatives receive an annual compensation equivalent to 20 per cent of the average wage of the deceased. A schedule of allowances for family charges is also included. Unemployment allowances are granted for a maximum of three months out of each year and are equivalent to 10 per cent of the salary of the insured.

The report of the Hygiene Committee, just published, estimates the number of insured at 8,100,000 receiving an average annual salary of 8,000 francs, representing an income of 64,800,000,000 francs. The annual assessment based upon the present law would therefore amount to the formidable sum of 6,480,000,000 francs, but the new method and arrangements recommended by this commission would represent only an 8 per cent assessment of 5,184,000,000 annually. This commission recommends, however, that certain concessions be granted to a large number of agricultural labourers who would total 1,800,000 of the above. The average salary is based upon a working year of 300 days.

The President of the Republic recently signed a special decree extending the benefits of the law to domestic servants. The decree deals primarily with the valuation, as part of the money wage, of the board and lodging accommodation generally received by indoor servants as part of their pay. In towns of 200,000 inhabitants or over, this form of payment is fixed as having a wage value of 7 francs per day, or 210 francs per month; in smaller towns at 5 francs a day, and in rural houses at 3 francs a day.

The Manitoba Legislature at its recent session adopted a resolution declaring that "whereas governments and people in all parts of the world are striving to substitute methods of peace and arbitration for those of violence and war in international affairs; and whereas cadet training fosters militarism and the war spirit in the rising generation; therefore be it resolved, that this House is of the opinion that the Government should discourage the continuance and future organization of cadet training in the public schools of Manitoba; and be it further resolved, that this House petition the Dominion Government to substitute for the present grant for cadet training, a similar grant for national physical instruction under a department other than the Department of National Defence.

Mr. John T. Foster, president of the Montreal Trades and Labour Council, will represent Canadian organized labour at the annual convention of the International Federation of Trade Unions, to be held at Stockholm, Sweden, on July 7-11. Mr. Foster will also be the Canadian representative at the British Commonwealth Labour Conference at London, on July 21. The subjects of discussion at both these conferences will include that of unemployment as a world problem, and the means of attaining a universal 5-day week in industry. The labour movement of the Dominion as represented by the Trades and Labour Congress of Canada is affiliated with the International Federation of Trade Unions, the congress having been admitted into membership in June, 1920. The president of the Congress is a member of the general council of the federation, the secretary being his substitute.

The Montreal Trades and Labour Council, at a meeting during May, considered a communication that had been received from the Hon. Peter Heenan, Minister of Labour, on the subject of insurance against unemployment, sickness and invalidity. The Minister pointed out that the House of Commons had approved the, principle of such insurance, based on obligatory contributions by the State, the employers and the workers. (LABOUR GAZETTE, February, 1930, page 106.) The Council adopted a resolution stating that while fully appreciating the interest shown by the Dominion Government, and recognizing that by virtue of the provisions of the British North America Act, the onus of enacting such legislation rested on the several provinces, the Council was of the opinion that a determined effort should be made by the Federal Government to cause the provincial authorities to recognize their responsibility in the matter; and instruct the Secretary to communicate with the Minister of Labour and express the desire of the Council that the Dominion Government take the necessary steps for the holding of an interprovincial conference for the immediate discussion of this question.

In giving evidence recently before the special Parliamentary Committee on Railways and Shipping, Sir Henry Thornton, president of the Canadian National Railways stated that in connection with the cooperation management scheme now carried on in the carshops and also in the operating and maintenance of way departments, an opportunity was given to the employees to make suggestions for improved methods of work. He stated that the divisional officials met the men's representatives periodically and discussed such suggestions.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada at the end of May was reported by the superintendents of the offices of the Employment Service of Canada to be as follows:

Farmers of the Province of Nova Scotia were handicapped in their spring work by heavy rains, and only a few requests for help were received. In the vicinity of Halifax all spring planting was finished. Fairly heavy fares of fish were recorded though New Glasgow fishermen reported decreased catches owing to stormy weather. In the logging industry pulp wood operators were busy putting in gangs for cutting, peeling and junking. Mines, for the most part, were operating on steady time. Manufacturing industries showed improvement, especially in production of confectionery, foodstuffs and soft drinks. Construction showed a favourable amount of activity, though at Halifax some of the larger contracts were nearing completion. Transportation, both passenger and freight, was fair, the traffic in the latter being due to the movement of lumber and coal to the waterfront for export. Trade was seasonally good, with collections fair. In the Women's Division, the demand for charworkers continued heavy, but difficulty was experienced in obtaining experienced general domestics.

In the Province of New Brunswick, farmers reported seeding and planting well advanced and crops progressing satisfactorily. Fishermen were busy, with exceptionally heavy catches of lobster, herring and gaspereaux recorded in some localities. Lumbering was confined chiefly to the northern portions of the province, though here disastrous fires had caused havoc and miles of valuable timber land had been destroyed. Transfer of pulpwood peelers from Northern New Brunswick to sections of Nova Scotia were also effected. Manufacturing industries were active, with woodworking factories and sawmills, in particular, reporting a busy season. Foundry work had fallen off somewhat, due to completion of spring orders. Building conditions were favourable with considerable headway reported. Road work was also progressing, with further contracts for highway construction to be started in the near future. Indications were favourable for increased tourist traffic in the transportation group, recent improvements having been made in rail and water service between different points. Trade was average. In the Women's Domestic Division there was the usual demand for casual workers and a few requests for general maids.

In Quebec, steady improvement was reported in the farming group both as to orders listed and applicants required. Vacancies in the logging industry consisted almost wholly of those for river drivers. Manufacturing in the City of Montreal appeared to be satisfactory, with conditions for the most part favourable. In Quebec City, factories were somewhat less busy than usual, while reports from Sherbrooke stated work was plentiful. Mining showed little activity. With but one exception, all offices reported greater activity in building construction, Hull reporting the placement of a large number of workers for electrical power development. A demand for painters, joiners and carpenters was recorded by Montreal, though the need for building labourers was not so great as expected. Municipal works also helped to improve the general situation. Transportation and trade, as yet, showed little gain. There was a great demand for female domestic workers, and numerous placements were effected, many of which were non-local.

A further reduction in the demand for farm workers was recorded by the employment offices of the Province of Ontario, many unemployed men canvassing the farmers in their own behalf. A good demand was recorded for river drivers for the logging industry, there being a scarcity of experts in this line at Sault Ste. Marie, but orders for pulpwood cutters were not so numerous as in former years. Mining showed little activity, with little expectation of improvement during this season. Quiet prevailed in manufacturing circles, with conditions in the auto industry none too bright. Further reductions occurred in the iron and steel group, while pulp and paper plants were making no additions to their staffs. Rubber manufacturing was slack. Building construction was somewhat quiet, with few large contracts in view, however, road work and sewer construction started in some municipalities afforded an opportunity for absorbing a portion of the unemployed. In the Women's Division of the offices the outstanding feature was the continued shortage of competent cooks general, many applicants preferring hotel work rather than domestic service in private homes.

Very little change in the demand for farm help was shown by Manitoba, a good supply of men being on hand and all jobs easily taken. Requests for experienced river drivers were recorded in the logging industry. Re-

ports would indicate that factory activities in Winnipeg were still sub-normal. The building trades were quiet, with a number of tradesmen unemployed, however, work on several large contracts was expected to begin shortly, which would help to relieve the situation. Trade, both wholesale and retail, was fair. Demands for women domestic workers were fairly numerous.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

As seeding had been finished in some sections of Saskatchewan there was a consequent decrease in the number of vacancies for farm workers. Quiet for the most part prevailed in the construction group with the majority of jobs of a casual nature. One road contract had been started near Estevan, which it was hoped would relieve the unemployment situation in that district. Conditions were quiet in the Women's Division, with supply and demand for housekeepers equal. The situation as regards employment throughout the province remained unchanged, with men moving from place to place in search of positions, steady work anywhere being difficult to obtain.

Crops in Alberta were reported as doing nicely, though the demand for help remained far below normal, but it was expected that beet thinning in the Lethbridge locality, which was due to start about the middle of June, would reduce to a great extent, the present surplus of unemployed. Logging and manufacturing were quiet and there was no activity in mining, the majority of men out of work being miners. Relief work in road construction was still being carried on in some districts, but building for the most part was not very brisk. Railroad work had started, but there was no call for men. All orders in the Women's Domestic Division were easily filled, and there were sufficient applicants to meet any demand.

The logging industry in the Province of British Columbia was reported as very slack, with no signs of improvement. Farming also was quiet. Serious depression was recorded in mining, both coal and metal, with a great surplus of workers on hand. Very little work was being undertaken in either building or road construction, though it was hoped that conditions would soon improve in the former instance. Provincial highway relief work had been cut down considerably, and railroads had as yet made no requests for extra gangs. Manufacturing was quiet, though some factories were expected to open at once. Vancouver and Victoria reported little change in the demand for women domestic workers. There was still a shortage of good cooks general. The employment situation as a whole in the Province of British Columbia showed no improvement, for there was little demand for labour outside of casual help, and this tended to aggravate the problem of the unemployed.

EMPLOYERS' REPORTS.

The Dominion Bureau of Statistics tabulated returns from 7,208 firms who reported a decidedly upward movement in employment on May 1, when they increased their pay-rolls by 31,470 persons to 976,224. Reflecting this gain of over three per cent, the index (with the average for the calendar year 1926, as 100), rose to 111·4, as compared with 107·8 on April 1, and with 116·2, 106·8, 101·8, 95·4, 91·9, 92·9, 92·5, 84·3, and 85·1, on May 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, 1921, respectively. The situation, though not so favourable as in the spring of last year, was, nevertheless, better than on May 1 of all earlier years for which data are available.

Heightened activity was recorded in all provinces, but Ontario and the Prairie Provinces registered the largest increases. In the Maritime Provinces, construction showed the greatest advances; manufacturing, especially in pulp and paper, lumber and fish-preserving plants, also showed important gains, while transportation and mining were seasonally slacker. In Quebec, important increases were shown in transportation and construction and maintenance, and there were smaller gains in trade, communications and services. On the other hand, manufacturing, logging and mining were slacker. In Ontario, construction and transportation reported the most marked increases, but the movement was also decidedly upward in manufacturing, mining, services and trade, while logging was seasonally dull. In the Prairie Provinces, manufacturing, transportation and construction showed heightened activity, the advances in the last named being most noteworthy. In British Columbia, manufacturing and construction were decidedly busier, especially pronounced improvement taking place in the latter; transportation and logging were also more active, while other industries showed only slight changes.

Montreal, Quebec, Toronto, Ottawa, Windsor and the adjacent Border Cities, Winnipeg and Vancouver showed considerably increased activity, but there was a decline in Hamilton. In Montreal, transportation, construction and trade recorded the greatest gains. In Quebec, most of the improvement took place in transportation and construction. In Toronto, transportation, construction, services and trade reported important increases in personnel. In Ottawa, lumber mills, construction and trade registered most of the increase. In Hamilton, manufactures were slacker, while transportation showed greater activity. In Windsor and the adjacent Border Cities, considerable advances were noted, chiefly in automobile factories and construction. In Winnipeg, construction and manufacturing reported the most noteworthy expansion. In Vancouver, manufacturing registered moderate increases.

An analysis of the returns by industries shows that there were important advances in

manufacturing, particularly in lumber mills, in which they were of a seasonal character. Marked improvement also took place in the fish-packing, pulp and paper, building material, electric current, vegetable food and mineral product divisions, while boot and shoe, rubber, textile and iron and steel factories were slacker. Transportation, services, trade and construction and maintenance also registered large increases in employment, those in the last-named being especially noteworthy. On the other hand, logging camps and coal mines released employees.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1930.

TRADE UNION REPORTS.

Employment among local trade union members at the close of April showed a gain from the previous month, according to the reports tabulated from 1,719 labour organizations with 206,326 members. Of these 18,581, or a percentage of 9·0 were idle at the end of the month compared with 10·8 per cent in March. Curtailment of activity was noted, however, from April last year, when 5·5 per cent of the members reported were without work. In comparison with March, increases in available employment occurred in every province except Nova Scotia, expansion in building and construction operations being a large factor in the improvement recorded. In Nova Scotia the situation remained approximately unchanged during the two months compared. Among Alberta, Saskatchewan, Ontario and Manitoba unions employment declined considerably from April last year and lesser contractions were recorded by British Columbia and New Brunswick unions. Nova Scotia and Quebec, however, reported some slight expansion.

Elsewhere in this issue will be found a more detailed article with tabular statements of unemployment in trade unions at the close of April, 1930.

EMPLOYMENT OFFICE REPORTS

During the month of April, 1930, the officers of the Employment Service of Canada made 29,617 references of persons to positions, and effected a total of 28,325 placements. The placements in regular employment were 15,547, of which 11,580 were of men and 3,967 of women, while those in casual work were 12,778 in number. Applications for work reported at the various offices numbered 44,145, of which 31,226 were from men and 12,919 from women workers. Employers advised the Service of 30,350 vacancies during April, 20,028 for men and 10,322 for women. An appreciable advance was indicated in the volume of business transacted when the above figures were compared with those of the previous month, but a marked decline was shown in comparison with the business effected during April a year ago, the records for March, 1930, showing 24,647 vacancies afforded, 38,686 applications made and 23,168 placements effected, while in April, 1929, the records show 41,557 opportunities for service, 48,523 applications for work and a total of 38,118 placements in regular and casual work. A report in greater detail of the work of the employment offices for the month of April, 1930, appears elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during April, 1930, was $16,276,443 as compared with $13,352,640 in the preceding month and with $29,656,709 in April a year ago.

The *MacLean Building Review* states that the contracts awarded for May this year, while in good volume, did not equal those awarded in Canada during the same month in either of the past two years. The total for May this year was $46,861,900, which is a decrease of 27·7 per cent from the volume reported for May, 1929. Of the May, 1930, total, $11,007,600 was for business buildings; $18,383,400 was for engineering purposes, including bridges, roads, sewers, etc.; $13,173,900 was for residential buildings, and $4,297,000 was for industrial buildings. The apportionment of the contracts awarded during May by provinces was as follows: Ontario, $18,672,400; Quebec, $11,862,900; Alberta, $5,870,800; Saskatchewan, $4,887,500; New Brunswick, $746,100; Nova Scotia, $627,200; Prince Edward Island, $579,500.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months, and also in the corresponding months last year, are shown in the table on page 626.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics states that while indexes of production indicate, after adjustment for seasonal tendencies, that operations in many lines were more active in April than in the preceding month, considerable unevenness was in evidence. The mining industry was one that felt the effects of reduced demand and lower

prices. An index based on the output and shipments of seven metals and minerals showed a marked contraction compared with March. In general manufactures, gains were shown in the newsprint, motor car and petroleum refining industries over the preceding month, while activity in other important industries such as iron and steel and lumber showed considerable contraction. The imports of raw cotton and wool indicate reduction in the operations of the textile industry. After adjustment for seasonal tendencies, the movement of revenue freight was greater than in any other month of this year, the index of carloadings rising to 129·6 in April compared with 118·9 in March and 123·1 in February, the second most active month of the year after seasonal adjustment.

Construction and transportation showed marked gains in working forces during the month, while manufacturing, trade and metal mining also added to the number of workers under engagement. The indexes for the five economic areas indicate that gains were general in the main sections of the Dominion. One of the striking features of the month was the gain in the daily average output of hydro-electric energy, the production of the central electric stations being 54,131,000 k.w.h. in March. The gain after seasonal adjustment was no less than 13 per cent. The index of the physical volume of business in April was slightly higher than in February and March, but lower than in January.

The output of Canadian coal in April amounted to 907,451 tons, a decline of 16·1 per cent from the five-year average for the month of 1,081,748 tons. Decreases were general in all producing provinces. The Canadian production consisted of 782,721 tons of bituminous coal, 103,912 tons of lignite coal, and 20,818 tons of sub-bituminous coal. Mines in Nova Scotia produced 436,256 tons, in New Brunswick, 18,114 tons, in Saskatchewan, 25,013 tons, in Alberta, 268,578 tons, and in British Columbia, 159,490 tons.

During April, imports of coal into Canada were 660,462 tons as compared with 734,619 tons imported during the same month of 1929. Imports in the current month came from Great Britain, the United States and Russia, and were made up of 125,075 tons of anthracite, 535,004 tons of bituminous, and 383 tons of lignite.

External Trade

A summary of Canadian trade by the Department of National Revenue shows that in April, 1930, the merchandise entering Canada for consumption amounted to $71,401,839, as compared with $112,991,460 in the preceding month and with $97,517,207 in April, 1929. The chief imports in April, 1930, were: Iron and its products, $21,016,689, Fibres, textiles and textile products, $10,452,570; Non-metallic minerals and products, $8,036,230.

The domestic merchandise exported during April, 1930, amounted to $50,744,139 as compared with $89,595,317 in the preceding month and with $65,727,599 in April, 1929. The chief exports in April, 1930, were: Wood, wood products and paper, $16,475,140; Non-ferrous metals and their products, $8,806,740; Agricultural and vegetable products, mainly foods, $8,000,996.

Strikes and Lockouts

The time loss due to industrial disputes in May, 1930, was much larger than that occurring in April, 1930, there being over ten times as many workers involved. As compared with May, 1929, the figures for May, 1930, show that approximately one-half as many disputes occurred, involving about one-third the number of workers, and causing about one-third the time loss recorded for May, 1929, when the month was marked by numerous strikes in the building trades involving large numbers of workers. There were in existence during the month thirteen disputes, involving 1,824 workers and resulting in a time loss of 12,957 working days, as compared with nine disputes, involving 280 workers and resulting in a time loss of 3,934 working days in April, 1930. In May, 1929, there were on record twenty-four disputes, involving 5,106 workers and resulting in a time loss of 39,152 working days. At the end of the month there were two disputes recorded as strikes or lockouts involving approximately 225 workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $11.17 at the beginning of May, as compared with $11.24 for April; $10.94 for May, 1929; $10.80 for May, 1928; $10.76 for May, 1927; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $12.66 for May, 1918; and $7.42 for May, 1914. The most pronounced changes were seasonal declines in the prices of butter, eggs and milk, while less important decreases occurred in the prices of beans, sugar

and tea. Slight advances occurred in the prices of potatoes, beef and mutton. Including the cost of fuel and rent with that of foods the total budget averaged $21.49 at the beginning of May, as compared with $21.53 for April; $21.21 for May, 1929; $21.04 for May, 1928; $20.95 for May, 1927; $21.54 for May, 1926; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; and $14.21 for May, 1914. Fuel was slightly lower, due to declines in the prices of anthracite coal and wood in some localities. Rent averaged somewhat higher.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again somewhat lower at 89.9 for May, as compared with 91.7 for April; 92.4 for May, 1929; 97.9 for May, 1928; 98.3 for May, 1927; and 100.2 for May, 1926. In the grouping according to chief component materials all of the eight main groups declined and the general index is now at the lowest level reached since September, 1926. The Vegetables and Vegetable Products group was lower, mainly because of lower prices for grains, sugar, coffee and raw rubber; the Animals and their Products, because of lower quotations for milk, butter and leather, which more than offset higher prices for eggs and livestock; the Fibres, Textiles and Textile Products, due to reductions in the prices of raw silk, silk fabrics and hessian; the Wood, Wood Products and Paper group, due mainly to declines in the prices of hemlock, fir and cedar lumber; the Iron and its Products group, because of reduced quotations for scrap iron, galvanized steel sheets and automobile body plates; the Non-Ferrous Metals and their Products group, due to lower prices for copper, silver, tin and zinc; the Non-Metallic Minerals and their Products group, because of reductions in coal prices; and the Chemicals and Allied Products group, because of declines in the prices of dyeing and tanning materials, paint materials and drugs.

Russian Coal in Canada

The May issue of *The Canadian Unionist*, the monthly magazine published by the All-Canadian Congress of Labour, contains an article entitled "Russia Sells Her Coal," showing the extent and alleged purposes of recent Russian exports of anthracite coal to Canada. The following paragraphs are from this article:—

"From the port of Mariupol on the Sea of Azof, tramp steamers are bringing Russian anthracite coal, dug by miners earning two dollars a day, and unloading it at Halifax and Montreal. At Montreal, where most of the anthracite arrives, part is re-shipped to the Canadian ports on the Great Lakes. This movement of coal began with 6,204 tons in December, 1928, and 117,404 tons were shipped to Canada in 1929.

"'Penetrating already to the western extremity of Lake Superior, the Russian coal is available at a price that ensures a ready sale. The retail price for the domestic consumer averages $16.50 a ton, though it is reputed to be laid down at Montreal for $6 a ton. From the 117,404 tons imported last year, this year the amount will increase to 250,000; next year it will double. The opening of the railway to Churchill will be followed by importation of Russian coal through that Hudson Bay port. The prairie market has been reached already; the importers plan to dominate it, at least so far as Manitoba is concerned. Within five years from December, 1928, they have contracted to deliver 2,500,000 tons.

"Russian anthracite is good coal. Less friable than Welsh or American, it can withstand the hard usage of transhipment. It is mined only sixty miles from tidewater and is transported from Mariupol to Montreal at a cost of from fourteen to eighteen shillings a ton—a mere fraction of the freight rate from Alberta to eastern Canada. But the greatest factor contributing to the Russian coal's competitive power is the low standard of wages paid the miners in the Donetz Basin.

"The Russian miners' standard of living is low, and with wages of four roubles a day (approximately two dollars) they are comparatively well off. The Soviet administration has brought about improvements in working conditions that compensate to some extent for the low wage-scale. The working day is of six hours. Underground workers are given a month's holiday with full pay each year; surface workers get two weeks. A sum equal to about fifteen per cent of the total wage-bill is spent annually on various forms of social service, such as workmen's compensation, old age pensions, unemployment insurance and sick benefits. Admirable though these measures are, the expense they involve is less than an additional half dollar a day on the wages. . . ."

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF MAY, 1930

DURING the month of May reports were received in the Department of Labour from three Boards of Conciliation and Investigation established to deal with disputes between (1) the shipping interests of the Port of Halifax and certain of their employees, being members of the Longshoremen's Association of Halifax, Local 269, International Longshoremen's Association; (2) the Canadian Pacific Railway Company and Canadian National Railways, on the one hand, and certain of their employees, on the other hand, being checkers, etc., on the Montreal wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; and (3) the Hydro Electric System of the City of Winnipeg and certain of its employees, being linemen, cablemen, station operators, etc., members of the Hydro and Mechanical Workers Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg.

Applications Received

During May applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour as follows:—

(1) From certain employees of the Canadian National Steamships, being machinists, boilermakers, electricians, blacksmiths and helpers, members of Lodge 631 of the International Association of Machinists, International Brotherhood of Blacksmiths, Drop Forgers and Helpers of America, and International Brotherhood of Boilermakers, Iron Ship Builders and Helpers of America. The employees protested against the closing of the machine shops at Halifax and Montreal, which resulted in eighty mechanics being thrown out of work. The matter was taken up with the parties concerned by the Chief Conciliation Officer of the Department and negotiations were proceeding at the close of the month.

(2) From certain employees of the Luscar Collieries, Limited, being members of Luscar Local Unit No. 24, Mine Workers' Union of Canada. The points at issue pertained to wages and working conditions, one hundred and sixty-three employees being directly affected and two hundred indirectly. A Board of Conciliation and Investigation was established by the Minister of Labour on May 12, the personnel being as follows:—Mr. Fraser MacLean, of Edmonton, Alberta, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Messrs. Mayne Reid, K.C., of Edmonton, Alberta, and John O. Jones, of Calgary, Alberta, the employer's and employees' nominees, respectively.

(3) From certain employees of the Moose Jaw Electric Railway Company, Limited, being members of the Amalgamated Association of Street and Electric Railway Employees of America. The dispute grew out of certain changes in working conditions and a reduction in wages proposed by the company, twenty-eight employees being directly affected. A Board of Conciliation and Investigation was established by the Minister of Labour, composed as follows:—Hon. Mr. Justice George E. Taylor, of Moose Jaw, Sask., chairman, appointed on the joint recommendation of the other Board members, and Messrs. James Kennedy and Albert Roy Everts, both of Moose Jaw, Sask., nominees of the employer and employees, respectively.

(4) From various employers, members of the Saint John Branch of the Canadian Construction Association, and certain of their employees being members of Local 1009, Brotherhood of Painters, Decorators and Paperhangers of America. Joint application by the employers and employees was made in this case informally by wire. The employees' demand for a minimum wage of 75 cents per hour, which was the cause of the dispute, had been rejected by the employing companies and the men ceased work on May 12. The strike terminated on May 20 when the parties agreed to refer the dispute under the terms of the Industrial Disputes Investigation Act. A Board of Conciliation and Investigation was established by the Minister of Labour on May 20, and members thereof were appointed as follows:—Rev. C. Gordon Lawrence, of Saint John, N.B., chairman, appointed on the joint recommendation of the other Board members, Messrs. John N. Flood and James L. Sugrue, both of Saint John, N.B., nominated by the employers and employees, respectively.

(5) From certain employees of various electrical supply firms of Saint John, N.B. The employers concerned in this dispute are stated to be members of the Saint John Branch of the Canadian Construction Association and the employees members of Local Union No. 502, International Brotherhood of Electrical Workers.

(6) From certain employees of the Winnipeg Electric Company being motormen, conductors and busmen, members of the Street Railway Employees' Unit, One Big Union.

(7) From certain employees of the London and Port Stanley Railway, being brakemen, conductors, motormen, etc., members of Division 741, Amalgamated Association of Street and Electric Railway Employees of America.

The three latter applications were received at the close of the month.

Other Proceedings under the Act

An application for the establishment of a Board of Conciliation and Investigation was reported in the May issue of the LABOUR GAZETTE (page 491) as having been received from the officers and crew of the ss. *P. E. Island,* owned by the Canadian National Railways and operating between Borden, P.E.I., and Cape Tormentine, N.B. A Board of Conciliation and Investigation was established by the Minister of Labour on May 17 and members thereof were appointed as follows: on the employer's recommendation, Mr. James Friel, K.C., of Moncton, N.B.; on the employees' recommendation, Mr. J. L. Cohen, of Toronto, Ontario. At the close of the month the Board had not been completed by the appointment of a chairman.

In the May issue of the LABOUR GAZETTE reference was also made (page 491) to the receipt in the Department of Labour of an application from longshoremen at the Port of Vancouver, as represented by the Vancouver and District Waterfront Workers' Association. The Shipping Federation of British Columbia, Limited, represented the employers concerned. A Board of Conciliation and Investigation was established by the Minister of Labour on May 14, constituted as follows: Mr. J. B. Thomson, of Vancouver, B.C., chairman, appointed on the joint recommendation of the other Board members, Messrs. J. E. Hall and R. B. W. Pirie, both of Vancouver, B.C., nominated by the employers and employees, respectively.

Report of Board in Dispute Between Shipping Interests at Port of Halifax and Their Longshoremen

A report was received on May 12 from the Board of Conciliation and Investigation which had been established to deal with a dispute between the shipping interests of the Port of Halifax and certain of their employees, being members of the Longshoremen's Association of Halifax, Local 269 of the International Longshoremen's Association. The personnel of the Board was as follows:—Rev. Dr. Clarence Mackinnon, of Halifax, N.S., chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. W. C. Macdonald, K.C., and John A. Walker, both of Halifax, N.S., nominees of the employers and employees, respectively. The dispute related to the interpretation of the section of the existing agreement dealing with the minimum number of men to be employed in the holds of ships. A strike had occurred in this case on April 10, the men returning to work on April 19 upon the differences being referred to a Board of Conciliation and Investigation under the terms of the Industrial Disputes Investigation Act. The report of the Board was unanimous, and the recommendations contained therein were later accepted by both parties to the dispute. The text of the Board's report follows:

Report of Board

HALIFAX, N.S., May 8, 1930.

RE *Industrial Disputes Investigation Act and re differences between the shipping interests of the Port of Halifax and the Longshoremen's Association of Halifax, Local 269, International Longshoremen's Association.*

To the Minister of Labour, Ottawa.

SIR,—We, the Board of Conciliation appointed by you in respect of the above mentioned dispute, beg to submit the following report:—

The dispute for which this Board was constituted arose out of an agreement existing between the Steamship Companies and the Longshoremen's Association. The agreement was entered into in the early part of last December and remains in force until the 30th of November, 1930, and continues from year to year unless notice to the contrary is given thirty days before the end of any agreement year. Clause (19) of the agreement reads as follows:

"That not less than six men be employed in the holds of ships, either discharging, loading or shifting cargo.

"This clause not to apply to coastal or grain steamers.

"Any question of practicability to be discussed by the Business Agent of the Longshoremen's Association and a representative of the Steamship Company concerned."

It is agreed that this regulation does not apply to coastal or grain steamers. It is also agreed that the question of practicability is to be discussed by the Business Agent of the Longshoremen's Association and a representative of the Steamship Company concerned.

But differences of opinion have arisen over the significance of "practicability" in the last clause of the section.

The longshoremen restrict its scope to merely physical conditions. Fewer than six men are only to be employed when the limitations of space permit no more.

The steamship companies give a wider interpretation to practicability claiming that mere limitation of space would hardly form a matter for discussion, and contending that economic considerations are involved in the adoption of the term.

At the time of the agreement it would seem that each of the contracting parties accepted the word in its own sense, and it is a matter of regret that a more explicit understanding had not been arrived at.

The first time that a dispute arose under Clause (19) was when a cargo of lumber was being unloaded at the Port of Halifax. The representative of the Steamship Company claimed that only four men were necessary in the hold whole the Longshoremen's Association claimed that the first part of Clause (19) was applicable and that a minimum of six men should be employed in the hold. Out of this dispute a strike occurred which lasted less than a week, the Company having agreed to put six men in the hold to discharge the cargo pending investigation by this Board.

After hearing the representatives of the Longshoremen's Association and the representatives of the Steamship Companies who are signatories to the agreement your Board feels that it is not expedient, even if possible, to undertake to fix the meaning of the term "practicability." In view of the varied conditions that might from time to time exist in the industry, this might appear as an attempt to revise the agreement.

Your Board, however, would make the following recommendations, which they believe to be in accord with the spirit of the agreement:

(1) That, except in the case of coastal or grain steamers, six be the accepted minimum number of men to be employed in the hold at any one time, and except in special circumstances there should be no variation from this rule.

(2) That under these special circumstances such as limited working space, shortage of men, unusual cargo or unusual and unforeseen conditions when this regulation cannot well be carried out and fewer men have to be used, there must first be a conference with the agent of the Longshoremen's Association.

Your Board has been impressed by the evident good-will that exists between both parties to this dispute and by the fact that for a period of almost a quarter of a century all differences as to wages and working conditions at the Port of Halifax have been amicably adjusted by the men and their employers by mutual agreement without any general cessation of work. And the friendly attitude of both parties during the present investigation has convinced the Board that there is nothing in the present situation which will alter the cordial relations that have existed in the past. Your Board is also confident that when any conference is necessary between the agent of the Longshoremen's Association and a representative of a Steamship Company the matter will be approached by both parties in the same spirit of reasonableness that has characterized them in the past, and that any matters arising out of Clause (19) of the Agreement, in the future, can be amicably adjusted by them.

(Sgd.) CLARENCE MACKINNON,
Chairman.

(Sgd.) W. C. MACDONALD,
Member of Board.

(Sgd.) J. A. WALKER,
Member of Board.

Report of Board in Dispute Between the Canadian Pacific Railway Company and the Canadian National Railways, on the One Hand, and Certain of Their Employees on the Montreal Wharf, on the Other Hand.

The Minister of Labour received on May 16 the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and the Canadian National Railways, on the one hand, and certain of their employees, on the other hand, being checkers, etc., on the Montreal Wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Five hundred employees were stated to be directly affected by this dispute, which related to the employees' request for increased wages. The personnel of the Board was as follows: Mr. Raoul Lacroix, of Montreal, P.Q., chairman, appointed on the joint recommendation of the other Board members, Messrs. Errol M. McDougall, K.C., and J. T. Foster, both of Montreal, nominees of the employers and employees, respectively. Upon the suggestion of the Board the parties concerned agreed to confer with a view to reaching a possible adjustment of the dispute, and the Board adjourned pending the outcome of the direct negotiations. On May 9 the Board was notified that the Employees' Committee felt that an agreement of the matters at issue could be reached with the railways concerned and the Board reported accordingly.

Report of Board

RE *Industrial Disputes Investigation Act and* RE *differences between the Canadian Pacific Railway Company and the Canadian National Railways and certain of their employees on the Montreal Wharf, being checkers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

MONTREAL, May 14, 1930.

To the Honourable PETER HEENAN,
Minister of Labour,
Ottawa.

SIR,—A dispute between the Canadian National Railways, on the one hand, and checkers and freight handlers, their employees, was brought to the attention of the Department of Labour on July 9, 1929. Nature and cause of the dispute included changes in rates of pay of eleven (11) cents per hour for all classes, increased rates for night work and certain other changes in rules.

Together with a dispute between the Canadian Pacific Railway, on the one hand, and gang foremen, checkers, coopers, sealers and porters, their employees, on July 17, 1929, has brought a request of the same nature as the preceding, omitting changes in rules.

Employees affected: 250 directly, 250 indirectly, in each case.

A Board of Conciliation and Investigation was established by the Honourable Minister of Labour, August 27, 1929.

The three members of the Board duly sworn April 24, 1930, are as follows:—

Mr. Raoul Lacroix, Architect, 1224 St. Catherine Street West, Montreal, P.Q.
Mr. Errol M. McDougall, K.C., 120 St. James Street, Montreal, P.Q.
Mr. J. T. Foster, 747 Stuart Avenue, Montreal, P.Q.
Mr. McDougall recommended by the employers.
Mr. J. T. Foster recommended by he employees.
Mr. Lacroix appointed as third member of the Board and Chairman, on April 10, 1930, by the Hon. Minister of Labour upon the recommendation of the two other members.

Following the appointment of its Chairman, the Board met for organization on the 24th day of April, 1930. A meeting with the parties was fixed for April 29, at which time the parties appeared and were represented by:—

Canadian Pacific Railway—by:
Mr. George Hodge—Assistant General Manager.

Canadian National Railways—by:
Mr. A. E. Crilly—Chief of Wage Bureau,
Mr. C. V. Savage—District Agent.

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees—by:
Mr. F. H. Hall—Vice-President,
Mr. W. A. Rowe—General Chairman.

A summary statement of the matters in dispute was submitted. Upon suggestion of the Board, the parties were requested to confer with a view to arriving at a possible adjustment of their differences and the meeting was adjourned to permit of such conferences.

As a result of the reference by the Board to the interested parties and following conferences between them, the Board was officially notified by letter, dated May 9, 1930, that the subject matter of the dispute had been withdrawn; such letter reads as follows:—

MONTREAL, May 9, 1930.

Mr. RAOUL LACROIX, Chairman, Board of Conciliation and Investigation,
1224 St. Catherine Street West,
Montreal.

DEAR SIR,—With reference to the Board of Conciliation and Investigation established by the Minister of Labour in connection with questions of rates of pay and working conditions for checkers and porters employed on the Montreal wharf by the Canadian Pacific Railway and Canadian National Railways.

I beg to inform you that as a result of direct discussion with the representatives of the railways, the Employees' Committee now feel that an agreement of the matters at issue can be reached with the railways and respectfully request the case be withdrawn from the Board.

On behalf of the employees, I take this opportunity to thank the members of the Board for the services they have rendered in the matter.

Yours very truly,

(Signed) W. A. ROWE,
Chairman of the Joint Committee.

In such circumstance, the Board feels that it has accomplished the functions entrusted to it and begs to report that the dispute is now disposed of in the manner indicated.

Four meetings of the Board were held as per minutes attached.

Respectfully submitted,

(Sgd.) RAOUL LACROIX,
Chairman.

(Sgd.) J. T. Foster.

(Sgd.) Errol M. McDOUGALL.

Report of Board in Dispute Between the Hydro-Electric System of the City of Winnipeg and Certain of Its Employees

The Board of Conciliation and Investigation established in March last to deal with a dispute between the Hydro Electric System of the City of Winnipeg and certain of its employees presented its report to the Minister of Labour at the close of the month. The report was unanimous and was accompanied by an agreement which the Board had been successful in negotiating between the disputing parties. The dispute directly affected approximately 260 men, being linemen, cablemen, station operators, etc., members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg.

The chairman of the Board was Mr. W. M. Neal, general manager of Western Lines, Canadian Pacific Railway Company, Winnipeg, who was appointed on the joint recommendation of the other Board members. The Board member nominated by the civic authorities was Mr. Wm. G. Chace, Winnipeg, and the member nominated by the employees was Mr. Harry Stephenson, Winnipeg.

The text of the report and agreement follows.

Report of Board

Winnipeg, Man., May 30, 1930.

Howard H. Ward, Esq.,
Deputy Minister of Labour and Registrar,
Parliament Buildings,
Ottawa, Ont.

Dear Sir,—Pursuant to notice and instructions embodied in your letter of March 4th, the Board of Conciliation and Investigation, composed of the undersigned, has heard and dealt with the dispute between the Hydro Electric System of the City of Winnipeg and certain of its employees being linemen, cablemen, station operators, etc., members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg, as set forth hereunder.

Due to unavoidable absence of the Chairman from Winnipeg, the Board was unable to hold its first meeting until March 13th, when the application for the Board was reviewed, and arrangements were made for hearings.

The first meeting took place in Winnipeg on Thursday, March 13th. Nineteen meetings took place from and including that date until May 7th. Thirty-one witnesses were produced by the employees, representing all major classes of positions which are included in the two units of the Civic Federation of the employees who applied for the Board. Seven witnesses were produced by the City. Numerous exhibits, setting forth wages and working conditions in other cities and in other comparable industries in the City of Winnipeg, were produced by the respective parties.

After hearing and considering the evidence the Board concluded that the possibilities of reaching an agreement that would be suitable to the parties, by direct negotiation, had not been exhausted, and, therefore, in accordance with clause 24 of the Industrial Disputes Investigation Act, proceeded to endeavour to bring the parties together. After several discussions with the representatives of the respective parties to the dispute, an agreement was reached, and the necessary authority was delegated to individuals representing each side to confer in an effort to reach an agreement covering not only wages, which was set forth in the application of the employees for the Board as being the primary cause of dispute, but to embrace working conditions as well. These representatives finally met, and the Board is pleased to be able to report that eventually an agreement covering both wages and working conditions was, with the assistance of the Board, entered into and signed. A copy, with covering letter of certification from the City Clerk, Mr. Magnus Peterson, is enclosed.

The agreement provides, as to wages, an increase for the employees concerned, numbering approximately two hundred and sixty, amounting in the aggregate to about $15,000 per annum. This figure is based upon an increase of two and a half cents per hour to hourly-rated employees, and $5 per month to monthly-rated employees. In applying the increase, however, the procedure of pooling the extra wages and distributing them amongst the positions concerned, for the purpose of correcting certain inequalities, was followed. This means that to some individual positions more than the basic increase was applied, and in others less, the object—upon which both parties agreed—being to correct unjustifiable differences in classification of position and rate.

The new agreement, which is the first that has been negotiated between the employees

concerned as a whole and the employers, provides for no major change in working conditions, which, generally speaking, were previously agreeable to both employer and employees. Their incorporation in this new agreement, however, tends to clarify their application and to reduce the opportunities for misunderstanding and dispute that may have existed under the previous, and more indefinite, mode of procedure.

Respectfully submitted,

(Sgd.) W. M. NEAL,
Chairman.
(Sgd.) HARRY STEPHENSON,
(Sgd.) W. G. CHACE.

City Clerk's Department. M. Peterson, City Clerk.

CITY OF WINNIPEG

L.R. 280 (a). May 27, 1930.

Mr. W. M. NEAL,
Chairman, Board of Conciliation and Investigation *re* Hydro-Electric System Workers.
251 Harvard Avenue, Winnipeg.

DEAR SIR,—I herewith enclose copy of agreement respecting working conditions and wages of the Electrical and Mechanical Workers of the Hydro-Electric System, which is mutually satisfactory to the Hydro Department, the members of the Special Committee appointed for the purpose of negotiating same and the representatives of the employees, which was approved by Council last evening and authorized to be executed by the proper officers of the city. The said agreement and the schedule of wages therein provided to take effect from January 1, 1930.

Yours truly,
(Sgd.) M. PETERSON,
City Clerk.

DRAFT AGREEMENT

Between the City of Winnipeg, hereinafter called The City of the First Part, and The Federation of Civic Employees, of the Second Part.

Witnesseth that the parties hereto hereby agree as follows:—

All employees of the city of Winnipeg shall be governed by the employment conditions for the several classes of services in which they are respectively employed, as hereinafter specified.

Schedule of Wages and Working Conditions for the Year 1930

That at all times the City shall receive a Grievance Committee to deal with any matters that cannot amicably be adjusted by the Head of the Department concerned.

That the City will not discriminate against any employee for being a member of this Federation.

Submission of Schedule: On, or before, the First day of January in each year there shall be submitted to the City, by its employees, a draft agreement and schedule for the City's fiscal year. Immediately upon its submission the City and a Committee of the employees shall proceed to jointly consider said draft agreement and schedule, and endeavour to arrive at an agreement thereon.

SCHEDULE of Wages and Working Conditions governing Linemen and Troublemen of the Winnipeg Hydro-Electric System, and the City Electrician's Department of the City of Winnipeg, for 1930.

Article 1

Section A.—Bulletin hours: That, except as otherwise provided, eight (8) hours shall constitute a day's work,—from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m. The hours on Saturday shall be from 8 a.m. to 12 noon. For all work up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time will be paid. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section B.—The Foreman shall be required to work a minimum of forty-four (44) hours per week. For all work up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time will be paid. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section C.—Trouble-men shall be required to work a minimum of forty-eight (48) hours per week. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section D.—Before reducing the hours of work, men considered temporary shall be laid off. Before there is any reduction in the permanent staff the hours shall be reduced to eight (8) hours of five (5) days per week. No extra men to be hired until schedule hours are resumed, when men with previous service shall be given preference.

Article 2

Section A.—Saturday afternoon and other time worked in excess of straight time hours, as above defined, shall be paid at the rate of time and one-half and from 12 midnight to 8 a.m., also Sundays, and Legal Holidays, shall be paid at the rate of double time.

Legal Holidays shall be as follows: Sundays, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, New Year's Day, and Civic Holiday, except that the overtime shall not apply when working Saturday, Sunday, or Legal Holidays which came in their regular shift.

Section B.—There shall be an equitable distribution of overtime. Men wishing to work overtime shall have their names on a roster and be called out in rotation.

Section C.—Any employee, who has worked overtime, shall not be laid off to equalize the overtime worked.

Section D.—Any employee called out in emergency after nine (9) o'clock p.m. shall receive not less than four (4) hours' pay at the regular day rate.

Article 3

Section A.—That City Linemen sent to do out-of-town work shall be provided with transportation in advance, and board, with no loss of time until they return; that is applicable

only in the case of out-of-town work not lasting more than one month.

Section B.—That all men hired to do out-of-town work shall be provided with transportation in advance, but shall not be provided with board, or in the alternative, if provided with board shall be paid 12 cents per hour less than men employed in the city.

Article 4

Section A.—That all employees shall receive an expense account on receipt of vouchers for same within seven (7) days.

Section B.—That any employee dismissed from work, while away from town, shall receive transportation to town.

Article 5

Section A.—Journeymen—A man having three, or more, years' experience in line work.

Section B.—Apprentice—A man who has not had three years' experience in line work. Apprentices shall be required to work only under the supervision of a journeyman, except during the last six (6) months of their apprenticeship. Apprentices will not be required to work overtime, except in cases of emergency.

Section C.—Prospective apprentices will be required to work one year on the ground before beginning their apprenticeship.

Section D.—There shall be no more than one apprentice to five (5) journeymen linemen.

Section E.—An apprentice lineman's seniority shall date from the time he starts his aprenticeship.

Article 6

Section A.—Order-Wagon gangs shall consist of two (2) journeymen (one of whom shall be rated as a sub-foreman) and a lineman's helper. This article not to apply to Trouble-men and helpers.

Section B.—Suitable covers shall be provided for work cars during inclement weather.

Article 7

Trouble-men doing shift work will be paid straight time for any eight (8) consecutive hours, and forty-eight (48) hours shall constitute a week's work. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Article 8

There shall be one seniority list—no effect in seniority by interchange of men between Overhead Construction and Arc Departments.

Article 9

Men moved to a higher position shall receive the minimum rate of pay for that position, unless temporarily filling the position of men on regular holidays, or who are absent on sick leave for a period not exceeding one week.

Article 10

Section A.—All wires carrying a voltage of 675 volts, or over, shall be classed as high voltage wires.

Section B.—When line work is being done on high-voltage wires, two Journeymen Linemen must be assigned to the job and not to be expected to work on two different wires at the same time. This shall not apply to Trouble-men. In the event of emergency on high-voltage wires Trouble-men shall have a Journeyman Lineman as an assistant.

Article 11

That badges be supplied free, and employees be held responsible for same.

Article 12

Two years' continuous service in the Line Department shall constitute eligibility for place on the permanent staff, should vacancies occur. The Manager of the Department to have final decision as to such appointment.

SCHEDULE of Wages and Working Conditions governing the Operating Staff of the City of Winnipeg Hydro Electric System for 1930.

Article 1

Eight (8) consecutive hours during the twenty-four (24) shall constitute a day's work, and forty-eight (48) shall be considered a week's work. All time worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Article 2

Section A.—All time work over forty-eight (48) hours per week shall be paid at the rate of time and one half for the first four hours, and double time thereafter for all time worked over the first regular eight (8) hours of shift. Such time being considered overtime and not being deducted off the bulletin hours of forty-eight (48) hours per week.

Section B.—When men are assigned to work on their day off same shall be paid at the rate of double time.

Article 3

Relief Operators shall be appointed from the first six (6) senior Operators, and Relief Assistant Operators shall be appointed from the first three (3) senior Assistant Operators, said Relief Operators and Assistant Operators being paid not less than forty-eight (48) hours per week. This section to be applicable to the regular day-off relief only.

Article 4

Section A.—In the event of an Operator or Assistant Operator being assigned to a higher position for any reason, he shall be paid at the rate paid Operators or Assistant Operators in that position, unless, he is temporarily filling the position of an Operator or Assistant Operator on regular holiday or who is absent on sick leave for a period not exceeding twelve (12) shifts.

Section B.—An Operator or Assistant Operator assuming a higher position shall do twelve (12) consecutive shifts, but once, for each position he assumes, carrying a higher rate of pay.

Section C.—All promotions shall be governed by the approved Seniority List.

Article 5

Assistant Operators shall be considered temporary employees for the first six (6) months of service.

Article 6

Operators or Assistant Operators on shift shall do no construction or repair work, except in case of emergency.

Article 7

In case of vacancies on the staff, and no Assistant Operators eligible to fill same, preference shall be given to competent journeymen at present employed in the Department. The Manager of the Department to have final decision as to competency.

Article 8

Section A.—In the event of Operators being moved to stations they have not previously operated they shall be given the following period for preparation:—

2 weeks at Power House,
2 weeks at Terminal Station,
1 week at all other stations.

Section B.—Operators in line for promotion from No. 2 Sub-station to No. 5 Sub-station shall first serve a term of apprenticeship as Second Terminal Operator.

Section C.—The course of promotion shall be as follows: Junior Relief Operator, May St. Sub., No. 2 Sub., Terminal Second Operator, No. 5 Sub., No. 1 Sub., No. 6 Sub., Terminal.

Article 9

One First and one Second Operator and one Floorman shall be the regular shift at the Terminal Station at all times. Said Second Operator being an Operator in line for promotion from No. 2 to No. 5 Sub-stations.

Article 10

Section A.—When new positions are created in the Department preference shall be given to men already in the Department, providing, that in the opinion of the Manager of the Department they are competent to hold same.

Section B.—In the event of a man being transferred from another Department to the Operating Department, and who is governed by the existing Schedule, he shall be classed as a junior man according to the established Seniority List. The Seniority List to be revised from time to time by the Manager of the Department and the Grievance Committee of the above Unit.

SCHEDULE of Wages and Working Conditions governing Chauffeurs of the City of Winnipeg Hydro Electric System for 1930.

Article 1

Fifty hours shall constitute a week's work, from 7.30 a.m. to 5.30 p.m., except on Saturdays, when the hours shall be from 7.30 a.m. to 12.30 p.m. These hours may be varied from time to time by mutual consent to suit the convenience of the Hydro-Electric Department. For all time up to fifty-two (52) hours per week, excepting Saturday afternoon, straight time will be paid. All time worked in excess of fifty-two (52) hours per week shall be paid at the regular overtime rates.

Article 2

Section A.—Saturday afternoon, and all time worked in excess of fifty-two (52) hours per week shall be paid at the rate of time and one half. From 12 o'clock midnight, Sundays, and all statutory holidays at the rate of double time.

Section B.—Men called out after 9 p.m. shall receive not less than four (4) hours' pay at the regular day rate.

Article 3

When through falling off in construction work or other cause, it is necessary to work on short time the weekly rate may be reduced in proportion to the number of hours worked.

GARAGE REPAIR SHOPMEN

Article 1

All men employed, excepting monthly paid men and a Garage Maintenance man, by the Hydro Garage whose services call for them to work in the Garage shall be governed by the working conditions specified hereunder and shall be classed as Repair Shopmen.

Shopmen may be divided into the following classes: First Class Mechanics, Second Class Mechanics, Helpers (with driving ability).

Article 2

Section A.—Shopmen shall work forty-four (44) hours per week. Eight (8) hours per day, except Saturday, when they shall work four (4) hours.

Section B.—Shifts of Shopmen shall be arranged to work, alternately, nights and days, according to Garage hours.

Section C.—Overtime shall be paid at the rate of time and one-half for all time in excess of forty-eight (48) hours per week. Saturday afternoons shall be paid for at the rate of time and one-half, and Sundays, and all statutory holidays at double time.

SCHEDULE of Wages and Working Conditions governing City of Winnipeg Hydro Electric System Meter-men for 1930.

Article 1

Section A.—Eight (8) hours shall constitute a day's work, from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m. The hours on Saturday shall be from 8 a.m. to 12 noon. For all work up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time will be paid. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section B.—Before reducing the hours of work, men considered temporary, who have not been in the city's employ six (6) months, shall be laid off. Before there is any reduction in the permanent staff the hours shall be reduced to eight (8) hours and five (5) days per week. No extra-men shall be hired until schedule hours have been resumed, when men with previous service shall be given the preference.

Article 2

Saturday afternoon and all time worked in excess of forty-eight (48) regular hours per week shall be paid at the rate of time and one-half, from 12 midnight to 8 a.m., also Sunday and legal holiday at the rate of double time.

Article 3

Section A.—Men sent to do out of town work shall be provided with transportation in advance, and shall suffer no loss of time until their return.

Section B.—All men shall receive expense accounts on receipt of vouchers for same, within seven days.

Article 4

Any employee called out in emergency after nine (9) p.m. shall receive not less than four (4) hours' pay at the regular day rate.

Article 5

Section A.—Journeymen—A man having four or more years' experience in one or more branches of the trade, as listed.

Section B.—Apprentice—Any employee not having four years' experience in one or more branches of the trade. Apprentices shall be required to work only under the supervision of a journeyman, except during the last six (6) months of their apprenticeship. Apprentices shall not be required to work overtime except in case of emergency.

The Charge Hand rate for the Meter Dept. shall apply in the case of a Charge Hand in charge of a crew of six (6) men, including Charge Hand. The Charge Hand shall revert to the standard rate when not doing Charge Hand work.

Article 6

In case of a man being moved to a higher position, he shall receive the minimum rate of pay for that position immediately, unless he is temporarily filling the position of an employee on regular holidays, or who is absent on sick leave for a period not exceeding four weeks.

Article 7

All wires carrying a voltage of 675 volts, or over, shall be classed as high-voltage wires.

Article 8

The badges be supplied free, and employees held responsible for same.

SCHEDULE of Wages and Working Conditions governing City of Winnipeg Hydro Electric System Station Maintenance Electrician's Staff for 1930.

Article 1

Section A.—Eight (8) hours shall constitute a day's work from 8 a.m. to 12 noon and from 1 p.m. to 5 p.m. The hours on Saturday shall be from 8 a.m. to 12 noon. For all time worked up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time will be paid. All time worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section B.—Before reducing the hours of work men considered temporary shall be laid off. Before there is any reduction in the permanent staff, hours be reduced to eight (8) hours of five (5) days per week. No extra men to be hired until schedule hours have been resumed, when men with previous experience shall be given preference.

Article 2

Saturday afternon and all time worked in excess of forty-eight (48) regular working hours per week shall be paid at the rate of time and one-half, and from 12 midnight to 8 a.m., also Sunday and legal holidays shall be paid at the rate of double time.

Article 3

Any employee called out in case of emergency after nine (9) p.m. shall receive not less than four hours' pay at the regular day rate.

Article 4

In the event of a man being moved to a higher position he shall receive the minimum rate for that position immediately, unless he is temporarily filling the position of a man on regular holidays, or who is absent on sick leave for a period not exceeding four weeks.

Article 5

In station work two journeymen, or one journeyman and an assistant shall be required to work on wires carrying a voltage of 675 volts, or over.

Article 6

Journeymen Station Maintenance and Construction men shall cover such men as are continually employed within or around the Power House and Sub-Station working on high-voltage apparatus.

Journeymen Inside Wiremen shall include all other wiremen whose duties do not normally require them to work in or about the Power House and Sub-Stations. The Charge Hand Rate shall apply to a Charge Hand in charge of a crew of six men including Charge Hand.

The Charge Hand to revert to the normal rate when not doing Charge Hand work.

Article 7

The following shall be defined as Public or Statutory Holidays: New Year's Day, Good Friday, Victoria Day (May 24th), Dominion Day, Civic Holiday, Labour Day, Thanksgiving Day, Christmas Day.

SCHEDULE of Wages and Working Conditions governing City of Winnipeg Central Steam Heating and Standby Plant Operating Staff for 1930.

Article 1

Eight (8) hours shall constitute a day's work and forty-eight (48) hours shall constitute one week's work. All time worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Article 2

Section A.—All time worked in excess of forty-eight (48) hours per week shall be paid at the rate of time and one-half for the first four (4) hours and double time thereafter for the time worked over the first regular eight (8) hours of shift. Such time being considered overtime and not being deducted from the bulletin hours of forty-eight (48) hours per week.

Section B.—When men are assigned to work on their day off same shall be paid at the rate of double time.

Article 3

Section A.—Relief Engineers shall be chosen from the first three (3) senior Firemen.

Section B.—In the event of an Assistant Engineer, or Fireman, being assigned to a higher position for any reason he shall be paid at the rate paid to Engineers or Assistant Engineers in that position, unless he is temporarily filling the position of an Engineer or Assistant Engineer on regular holidays, or who is absent on sick leave for a period not to exceed twelve (12) shifts.

Section C.—An Engineer or Assistant Engineer shall do twelve (12) consecutive shifts, but once, for each position he assumes carrying a higher rate of pay.

Article 4

Engineers or Assistant Engineers shall do no construction work, or repair work except in case of emergency, except during June, July and August.

Article 5

One (1) Engineer and two (2) Assistant Engineers shall be on duty at all times.

Article 6

Section A.—When new positions are created in the Department, preference shall be given in order of seniority to men already in the Department, providing that in the opinion of the Manager of the Department the man is competent to hold same.

Section B.—In the event of a man being transferred from another department to the Operating Staff, and who is governed by the existing schedule he shall be classed as junior man according to the Seniority List. Said Seniority List to be revised from time to time by the Manager of the Department, and the Grievance Committee of the above Unit.

Article 7

After twelve (12) months service all employees shall receive one week's holiday with pay, and after two (2) years' service shall receive two weeks' holiday with pay. Holidays to be taken between June 1 and September 1.

SCHEDULE of Wages and Working Conditions governing the Maintenance Staff of the Central Heating and Standby Plant for 1930.

Article 1

Eight (8) hours shall constitute a day's work —from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m. Saturday, the hours shall be from 8 a.m. to 12 noon. For all hours worked up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time will be paid. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Article 2

Saturday afternoon, and all time worked over the regular working time of forty-eight (48) hours per week, shall be paid at the rate of time and one-half, and from twelve (12) midnight to eight (8) a.m., also Sundays and legal holidays, the rate shall be double time. Any employee called out in case of emergency after nine (9) p.m. shall receive not less than four (4) hours' pay at the regular day rate.

Article 3

The following shall be defined as statutory, or public holidays: New Year's day, Good Friday, Victoria Day (May 24), Dominion Day, and the Civic Holiday, Labour Day, Thanksgiving Day, and Christmas Day.

Article 4

After twelve (12) months' service all employees shall receive one week's holiday with pay, and after two (2) years' service shall receive two (2) weeks' holiday with pay.

Article 5

There shall be an equitable distribution of overtime. Men wishing to work overtime shall have their names on a roster and be called out in rotation.

GENERAL Clauses covering all Departments whose Schedules are embodied herein.

1. A Grievance Committee shall be appointed by the members of the above Unit and should any employee—subject to this agreement—feel that he has been unjustly dealt with, or that any of the provisions of this Agreement have been violated, he shall make a statement of the case in writing to the Grievance Committee. If, after investigation, the Committee find that the complaint justified further action they shall take the matter up with the Manager, or whoever he may appoint as his deputy, and endeavour to settle the matter to the satisfaction of all concerned.

2. Seniority with efficiency shall prevail in all departments.

3. All overtime to be worked by the staff in whose department it originates when possible.

4. Any employee who has worked overtime shall not be laid off to equalize the overtime worked.

5. After twelve (12) months' service all members of the permanent staff shall receive one week's holiday with full pay, and after two years' continuous service shall receive two weeks' holiday, each year, with full pay. Holidays when possible to be taken between the 1st of May and the 1st of November.

6. That all employees shall receive their pay semi-monthly, and during working hours on the specified day. Should the regular pay-day fall on a Sunday, or other holiday, the day preceding shall then become pay-day.

FEDERATION OF CIVIC EMPLOYEES

SCHEDULE of working conditions and wages governing the employees of the City of Winnipeg Hydro Electric System at Pointe du Bois for the year 1930.

Article 1

Operating Staff: (Operators; Assistant Operators; Floormen.)

Section A.—Eight (8) consecutive hours during the twenty-four (24) shall constitute a day's work, and forty-eight (48) hours shall be considered a week's work. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section B.—All hours worked in excess of forty-eight (48) hours per week shall be paid at the rate of time and one-half for the first four (4) hours and double time thereafter for the time worked over the first regular shift of eight (8) hours, such time being considered overtime and not to be deducted from the bulletin hours of forty-eight (48) hours per week.

Section C.—When men are assigned to work on their days off, same to be paid at the rate of double time.

Section D.—The course of promotion shall be as follows:—

Relief 2nd Floorman to 2nd Floorman; 2nd Floorman to 1st Floorman; 1st Floorman to Assistant Operator; Assistant Operator to Operator.

Section E.—In the event of a man being transferred from another Department to the Power House Operating Department, he shall be classed as Junior Man.

Section F.—In the event of an employee being assigned to a higher position for any reason, he shall be paid at the rate paid employees in that position, unless he is temporarily filling the position of an employee on regular holidays, or who is absent on sick leave for a period not exceeding twelve (12) shifts.

Section G.—An employee assuming a higher position shall do twelve (12) consecutive shifts, but once, for each position he assumes, carrying a higher rate of pay.

Section H.—In the event of any man refusing promotion, or having been promoted, being unable to fulfill the duties of the position promoted to, he shall forfeit his place on the Seniority List and be placed as junior man on the List.

Article 2

Maintenance Staff: (Journeymen Electricians; Mechanics; Carpenters; Painters; Power-House Carpenter Helper, Sub-Foremen; Electrician's and Mechanic's Helpers.)

Section A.—Eight (8) hours shall constitute a day's work, from 8 a.m. to 12 noon, and from 1 p.m. to 5 p.m. The hours on Saturday shall be from 8 a.m. to 12 noon. For all time worked up to forty-eight (48) hours per week, exclusive of Saturday afternoon, straight time shall be paid. All time worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates

Section B.—Before reducing the hours of work, men considered temporary shall be laid off. Before there is any reduction in the permanent staff, the hours shall be reduced to

eight (8) hours of five (5) days per week. No extra men to be hired until schedule hours have been resumed when men with previous service shall be given preference.

Section C.—Saturday afternoon and all time worked in excess of forty-eight (48) regular working hours per week shall be paid at the rate of time and one-half, and from 12 midnight to 8 a.m., also Sundays and Legal Holidays shall be paid at the rate of double time.

Section D.—Any employee called out in case of emergency after nine (9) p.m., shall receive not less than four (4) hours pay at the regular day rate.

Article 3

Train Crew: (Locomotive Engineer; Conductor; Firemen; Brakemen.)

Section A.—Eight (8) consecutive hours during the twenty-four (24) shall constitute a day's work, such eight (8) hours to start from the time work is commenced for that day, and forty-eight (48) hours shall constitute a week's work. All hours worked in excess of forty-eight (48) hours per week shall be paid at the regular overtime rates.

Section B.—All hours worked in excess of forty-eight (48) hours per week shall be paid at the rate of time and one-half for the first four (4) hours, and double time thereafter for the time worked over the first regular shift of eight (8) hours, such time being considered overtime and not to be deducted from the bulletin hours of forty-eight (48) hours per week.

Section C.—Sundays and Legal Holidays to be paid at the rate of double time.

Section D.—In the event of an employee being assigned to a higher position for any reason, he shall be paid at the rate paid employees in that position, unless he is temporarily filling the position of an employee on regular holiday, or who is absent on sick leave for a period not exceeding twelve runs.

Section E.—An employee assuming a higher position shall do twelve (12) runs, but once, for each position he assumes, carrying a higher rate of pay.

Article 4

Section Gang and Labourers.

Section A.—Nine hours shall constitute a day's work, from 7 a.m. to 12 noon and from 1 p.m. till 5 p.m., and fifty-four hours shall constitute a week's work. All hours worked in excess of fifty-four (54) hours per week shall be paid at the regular overtime rates.

Section B.—All hours worked in excess of fifty-four (54) hours per week shall be paid at the rate of time and one-half. From 12 midnight to 7 a.m., also Sundays and Legal Holidays shall be paid at the rate of double time.

Article 5

School Teachers.—The working conditions governing the School Teachers shall be the same as maintains throughout the rest of the civic service in so far as they are applicable to their positions.

Article 6

Patrolman and Lineman.

The working conditions governing the Patrolman and Lineman shall be the same as maintains throughout the civic service for men similarly employed.

Article 7

Monthly Staff.

The working conditions governing the monthly staff shall be the same as maintains throughout the rest of the civic service for monthly employees in so far as they are applicable to their respective positions.

Article 8

General Clauses—governing all employees coming under this schedule.

Section A.—Employees called out in case of emergency after 9 p.m., shall be paid not less than four (4) hours full pay at the regular day rate.

Section B.—All overtime to be worked by the staff in whose Department it originates, and shall be distributed as evenly as possible.

Section C.—Seniority with efficiency shall be the basis of promotion.

Section D.—All promotions shall be governed by an approved Seniority List.

Section E.—When new positions are created in the Department, preference shall be given to men already in the Department, providing they are competent to fulfill the duties of such new position.

Section F.—After twelve (12) months' continuous service, employees shall receive one week's holidays with full pay, and after two years' continuous service employees shall receive two weeks' holidays each year with full pay. Holidays to be taken between the 1st of May and the 1st of November, if possible.

Section G.—The following shall be defined as legal holidays, viz:—New Year's Day, Good Friday, Victoria Day (May 24th), Dominion Day, Civic Holiday, Labour Day, Thanksgiving Day, Christmas Day.

Section H.—A Grievance Committee shall be appointed by the members of this Unit and should any employee, subject to this agreement, feel that he has been unjustly dealt with, or that any of the provisions of this agreement have been violated, he shall make a statement of the case in writing to the Grievance Committee. If, after investigation, the Committee find that the complaint justifies further action, they shall take the matter up with the Manager or whomsoever he may appoint as his deputy, and endeavour to settle the matter to the satisfaction of all concerned.

Tramway mechanic and welder	.80	"
Gas-electric driver	.65	"

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1930

THE number of strikes and lockouts in existence in Canada during May was thirteen, as compared with nine the preceding month. The time loss for the month was much larger than that occurring in April, there being over ten times as many workers involved. As compared with May, 1929, the figures for May, 1930, show that approximately one-half as many disputes occurred, involving about one-third of the number of workers and causing about one-third of the time loss recorded for May, 1929, when the month was marked by numerous strikes in the building trades, involving large numbers of workers.

Date	Number of disputes	Number of employees involved	Time loss in working days
*May, 1930	13	1,824	12,957
*April, 1930	9	280	3,834
May, 1929	24	5,106	39,152

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Four disputes, involving one hundred and thirty workers (one not previously reported, metal polishers at Toronto, Ont.), were carried over from April, and nine disputes commenced during May. Of these thirteen disputes eleven terminated during the month, four being in favour of the employer, two in favour of the workers, one being partially successful, two resulting in a compromise, and the result of two being recorded as indefinite. At the end of May, therefore, there were two disputes recorded as strikes or lockouts, as follows: men's clothing factory workers, Montreal, P.Q., and painters at Halifax, N.S.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; and photo engravers, Toronto, Ont., January 7, 1929, one employer. Two disputes carried in this list for some months are considered as having lapsed during May, namely: moulders, Lachine, P.Q., May 2, 1929, one employer; and shoe factory workers, Montreal, P.Q., January 23, 1930, one employer.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—This dispute, involving one establishment in Montreal, commenced on March 18, 1930, for union wages and working conditions, and remained unterminated at the end of May, there being sixty-three strikers still out, the other nineteen having secured work with other employers. Early in May a number of strikers and two union organizers were arrested and charged with intimidation in connection with picketing but were released on bail.

METAL POLISHERS, TORONTO, ONT.—Metal polishers and buffers employed in an establishment manufacturing metal cooking utensils ceased work on April 28, 1930, alleging that union men had been discharged, wages (piece rates) reduced, and non-union men engaged, and that the employer refused to recognize the union. The employer reported that the establishment was an open shop and that the employees had ceased work when two non-union men were engaged. On May 16 the strike was called off by the union, work being resumed without securing any concessions except time and one-half for overtime after nine hours.

PAINTERS, TORONTO, ONT.—This dispute, commencing March 18, 1930, for an increase in wages, appears to have lapsed early in May, the employer having replaced the strikers.

CARPENTERS, FALL RIVER, B.C.—A strike of carpenters employed on the construction of a dam and power house at Falls River was settled on May 12, a rate of $8.50 per ten-hour day being agreed upon instead of the $9 demanded by the strikers.

RIVER DRIVERS, JACQUES TOWNSHIP (NEAR PORT ARTHUR, ONT.).—Employees of the members of the farmers' association of Jacques Township, near Port Arthur, Ont., ceased work on May 12 to secure an increase in wages from 35 cents per hour to 40 cents. The strikers were replaced by other workers, and on May 20 the strike was called off.

COAL MINERS, CALEDONIA, N.S.—Coal miners in one colliery ceased work on May 27 owing to a dispute in regard to pushing of coal cars into the working places from the haulage way. Since 1926 under a local contract the drivers had been on piece rates and had pushed the cars into the working places. Some months ago they demanded an increase in the rate per ton. Negotiations for an increase in the rate not coming to a successful conclusion, the drivers ceased pushing out the cars, which was then done by the miners for some time, but these finally refused and the mine was tied up. Work was resumed after one day, pending further negotiations.

PRESSMEN, HALIFAX, N.S.—Printing pressmen and assistants ceased work on May 17 to secure a union agreement providing for closed

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to May, 1930			
MANUFACTURING—			
Clothing (including knitted goods)—			
Men's clothing factory workers Montreal, P.Q.	66	1,650	Commenced Mar. 18, 1930: for union wages and working conditions. Unterminated.
Non-Ferrous Metal Products—			
Metal polishers, Toronto, Ont..	19	247	Commenced Apr. 28, 1930; against decrease in wages and employment of non-unionists. Terminated May 16, 1930. In favour of employers.
CONSTRUCTION—			
Buildings & Structures—			
Painters, Toronto, Ont.....	7	35	Commenced Mar. 18, 1930, for increase in wages and change in working conditions, Lapsed early in May, 1930.
Miscellaneous—			
Carpenters, Falls River, B.C..	38	342	Alleged lockout; commenced Apr. 12, 1930; against decrease in wages. Terminated May 12, 1930. Compromise.
(b) Strikes and Lockouts Commencing During May, 1930			
LOGGING—			
River drivers, Jacques Township Ont.	100	700	Commenced May 12, 1930; for increase in wages. Terminated May 20, 1930. In favour of employer.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Caledonia, N.S...	600	600	Commenced May 27, 1930; to secure increase in piece rate for drivers. Work resumed May 28, 1930, pending further negotiations.
MANUFACTURING—			
Printing & Publishing—			
Pressmen, job, Halifax, N.S...	8	32	Commenced May 17, 1930; for increase in wages and union agreement. Terminated May 23, 1930. In favour of workers.
CONSTRUCTION—			
Buildings & Structures—			
Painters, Halifax, N.S.....	175	4,000	Commenced May 1, 1930; for increase in wages. Unterminated.
Plumbers, Windsor, Ont.....	120	1,500	Commenced May 1, 1930; against reduction in wages. Terminated May 31, 1930. In favour of workers.
Bricklayers, Saint John, N.B..	71	426	Commenced May 1, 1930; for increase in wages. Terminated May 8, 1930. Compromise.
Painters, Saint John, N.B....	60	540	Commenced May 12, 1930; for increase in wages and union agreement. Terminated May 21, 1930. Indefinite.
Building trades, Toronto, Ont..	350	875	Commenced May 16, 1930; alleged violation of agreements re wages and employment of union members. Terminated May 19, 1930. Partially successful.
TRANSPORTATION AND PUBLIC UTILITIES—			
Steam Railways—			
Extra gang labourers, Newbury, Ont.	210	210	Commenced May 8, 1930; for increase in wages. Terminated May 9, 1930. In favour of employer.

shop. Work was resumed after four days, an agreement having been signed with the union providing for increases in wages and the closed shop. One job printing office was involved and the agreement is summarized elsewhere in this issue.

Painters, Halifax, N.S.—Union painters in Halifax ceased work on May 1 to secure an increase in wages from 73 cents per hour to 90 cents, and a reduction in hours from forty-four per week to forty, in negotiating a new agreement with the contractors' association. A settlement not having been reached within a few days, proposals to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act were made by the mayor. This was agreed to by the painters, but was refused by the contractors, and the consent of both parties was necessary as the industry was not one of those directly within the scope of the statute, namely mines and public utilities. The largest undertaking affected by the dispute was the construction of a hotel for the Canadian National Railways, a local sub-contractor having the painting contract. The main contractor proposed that the painters should resume work on this job, the terms of any settlement to be retroactive, but the union refused to permit this as the sub-contractor was a member of the contractors' association. Finally the main contractor made arrangements to do the painting instead of the sub-contractor, and work was resumed at 80 cents per hour, most of the strikers being employed on this job. At the end of the month the strike against contractors, members of the association, was still unterminated.

Plumbers, Windsor, Ont.—Union plumbers became involved in a strike on May 1, when the employers refused to renew the agreement providing for a wage rate of $1.35 per hour, proposing a decrease to $1.25. From time to time between May 15 and the end of the month individual employers signed agreements with the union providing for the rate of $1.35 and on May 30 the strike was called off.

Bricklayers, etc., Saint John, N.B.—Bricklayers, masons and plasterers ceased work on May 1 to secure an increase in wages from $1 per hour to $1.25. One hundred and twenty helpers were indirectly involved. On May 8 work was resumed, an agreement having been signed between the union and the employers providing for $1.15 per hour.

Painters, Saint John, N.B.—Painters ceased work on May 12 to secure recognition of union and a union rate of wages at 75 cents per hour, eight hours per day, forty-four hours per week. Prior to the dispute wages are reported to have ranged from 50 cents to 65 cents per hour with hours eight per day and between forty-four and forty-eight hours per week. On May 20, as a result of the conciliation of the district officer of the Department of Labour, the parties involved agreed to refer the dispute to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, and work was resumed until the report of the Board should be made.

Building Trades, Toronto, Ont.—Employees in various building trades engaged on the construction of a building in Toronto ceased work on May 16 to secure the maintenance of certain conditions claimed to have been previously agreed upon. The painting contractor had refused to pay $1 per hour which he had paid on a previous job by verbal agreement with the international union, and paid only 85 cents per hour, the rate provided for in an agreement between the National Painters' Union and the Master Painters' Association, in effect May 1. An agreement that hardwood floors would be laid by union men at union rates was understood to have been made and the sub-contractors were not adhering to this. The various crafts employed on the building walked off the job without orders from any of the unions. Officials of the unions held conferences with representatives of the contractors and the owner of the building and reached a settlement. It was arranged that union painters would be employed at 85 cents per hour and that union hardwood floor layers would be engaged at union rates.

Extra Gang Labourers, Newbury, Ont.—Labourers engaged in laying new track near Newbury in the vicinity of Bothwell, Ont., ceased work, demanding an increase in wages from 25 cents per hour to 30 cents. The strikers were paid off and replaced the same day.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in April was 27, and 13 were still in progress from the previous month. The number of workpeople involved in the 40 disputes which were in progress during the month was 110,000, and the time loss 1,300,000 working days. Of the 27 disputes beginning in April, 5 were over proposed reductions in wages, 11 on other wages questions, 8 on questions respecting the employment of particular classes or persons and 3 on other questions as to working arrangements. Settlements were reached in 21 disputes, of which 2 were in favour of workpeople, 8 in favour of employers and 11 ended in compromises. In the case of 4 other disputes, work was resumed pending negotiations.

The dispute in the woollen textile industry in Yorkshire which began on April 10, and was reported in the LABOUR GAZETTE for May, was still in effect at the beginning of June. The dispute arose out of the refusal of the trade unions to accept a reduction of 9·25 per cent in the wages of time workers, and 8·77 per cent for piece workers, as recommended by the court of inquiry appointed by the Minister of Labour. In some districts work was being gradually resumed, but it was estimated that on May 15 there were nearly 60,000 still involved. Negotiations for a settlement were in progress during the first week of June.

Palestine

The number of strikes which took place in Palestine in 1929 was 45 involving 679 workers and resulting in a time loss of 8,773 working days for the year.

Australia

It is reported that a settlement was reached in May of the dispute in the coal mining industry in New South Wales which began in March, 1929, and was reported in the LABOUR GAZETTE for May, 1929, and succeeding months. The terms of the settlement provide for reductions in wages which the unions had previously refused to accept.

United States

The number of disputes beginning in March was 35, while 32 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 5,171 and the time loss 289,561 working days for the month.

A strike in the building trades in Kansas City, Missouri, lasted for two weeks in March, and involved about 8,500 workers. The strikers were successful in obtaining a 5-day week from July 1, and partial increases in wages.

The German Industrial Inquiry Board recently investigated the subject of the workers' attitude towards the process of mechanizing industry. The results of the inquiry are described by Dr. Otto Lippmann, of Berlin, in the *Personnel Journal* (New York), June, 1930. The committee found that the workers were for the most part hostile to the introduction of machinery, as work in the mechanized plants is thought to involve a considerable increase in physical and mental strain. This attitude of hostility is partly attributed to the workers' unwillingness to break fixed habits, but it is also due to the fact that the new mechanical processes cause uncertainty of employment, and that the workers do not fully profit by the increased production brought about by machines. However, the inquiry showed that the use of machinery in plant operations was bringing definite, though unacknowledged, benefits to the workers. The period since 1913, it is stated, has been marked by a tremendous increase in the use of machinery in the anthracite coal mines of Germany. Whereas in 1913, 95 per cent of the coal was mined by hand, through blasting, in 1926 the percentage of hand-mined coal had been reduced to 33 per cent.

METHODS OF ADJUSTING INDUSTRIAL DISPUTES IN CANADA

*Paper Read Before the 17th Annual Convention of the Association of Governmental Officials in Industry of the United States and Canada, by Frank J. Plant, Chief of the Labour Intelligence Branch, Department of Labour of Canada**

WITH a view to indicating the methods employed in the Dominion of Canada in the settlement of labour disputes I wish to mention, first, that we have a Conciliation Act which is administered by the Federal Department of Labour, and which has been on the statute books for nigh on to 30 years.

Conciliation and Labour Act

Through its machinery a large number of disputes have been from time to time satisfactorily adjusted by a representative or representatives of the Department of Labour, the number for the fiscal year ended March 31, 1930, being 28 out of 32 disputes in which the government mediators had taken part. While this law for the settlement of industrial disputes had been and still is of value, it does not prevent a strike occurring before a conciliator has endeavoured to effect a settlement. Consequently in 1906 there was a prolonged strike in the coal mines of Lethbridge, Alberta, which had threatened to cause a fuel famine in the prairie provinces of the Dominion. Negotiations resulting in a settlement of the strike were conducted by Mr. W. L. Mackenzie King, then Deputy Minister of Labour and now Prime Minister of Canada, who, in his report on the subject, dealt at length with the danger and loss to the country ensuing from such stoppages, and recommended that consideration be given by Parliament to industrial disputes legislation which would have as its dominant motive the prevention of strikes seriously menacing the public safety. The outcome of this suggestion was the enactment of the Industrial Disputes Investigation Act, 1907, the intent of which is more fully set forth in its complete title "An Act to aid in the Prevention and Settlement of Strikes and Lockouts in Mines and Industries Connected with Public Utilities," and which became law on March 22, 1907.

Industrial Disputes Investigation Act

The essence of the legislation is the provision that in disputes arising in mines and public utility industries no strike or lockout may be lawfully declared until after the subject of the dispute in question has been investigated by a Board of Conciliation and Investigation and every reasonable effort has been made to bring the parties concerned to an agreement. The Act does not forbid strikes or lockouts failing an ultimate agreement, but forbids them only pending inquiry before a board. The award of a board is not binding unless the parties agree to make it so. At least thirty days' notice is required to be given by employers and employees regarding an intended or desired change affecting wages or working conditions, and the Act prescribes further that, in the case of a dispute arising, any such contemplated change may not take place until the dispute has been finally dealt with by a board.

Penalties are named in the statute for employers causing a lockout or change in wages or hours, and for employees engaging in a strike, prior to board proceedings; also for persons who incite, encourage or aid those taking part in such strikes or lockouts. While the Act applies equally to strikes and lockouts, it may be remarked that the lockout is rarely encountered in Canada, though it is true that here and there in an industrial dispute the nature of a stoppage of work becomes sometimes confused, and it is difficult to determine whether it may be correctly attributed to either one cause or the other. An admitted lockout is practically unknown.

Validity of the Act.—The constitutionality of the Industrial Disputes Investigation Act has been the subject of judicial proceedings on two occasions.

In 1911, in connection with a board constituted under its provisions to deal with a dispute between the Montreal Street Railway Company and certain of its employees, a permanent injunction was obtained restraining the board from proceeding with its inquiry by reason of an alleged technical defect in the establishment of the board. The judges of both the Superior Court and the Court of Review of the Montreal District, however, declared the Act to be constitutional and *intra vires* of the Dominion Parliament.

In August, 1923, proceedings concerning the constitutionality of the Industrial Disputes Investigation Act were instituted in the Ontario courts by the Toronto Electric Commissioners, who refused to recognize the authority of a Board of Conciliation and Investigation established to deal with a dispute between the commissioners in question and their electrical workers. The commissioners contended that, as the Toronto Hydro-Electric System was

*A report of the convention is published elsewhere in this issue.

controlled by a municipality, the provisions of the Act could not be applied to the particular dispute; also that the statute invaded provincial rights and was unconstitutional. The case was heard by various Ontario courts, and was carried to the Judicial Committee of the Privy Council. The judgment of the latter was delivered on January 20, 1925, and was to the effect that the Act in its then existing form was *ultra vires* of the Dominion Parliament, on the ground that it encroached upon the rights given to the provinces under the provisions of the British North America Act. A volume was issued by the Department of Labour during 1925 containing a full account of the legal proceedings in this case, and including the texts of the judgments of the various Ontario courts and of the Judicial Committee of the Privy Council, the cases for the several parties as presented before the Judicial Committee, the argument before the Juridical Committee, and other correlated data.

Scope of the Act.—Following the decision of the Judicial Committee of the Privy Council, the question of constitutional limitation was carefully considered and amendments to the Industrial Disputes Investigation Act were drafted with the object of confining the application of the statute to matters not within the exclusive legislative jurisdiction of any province. The amendments were enacted at the 1925 parliamentary session, and the statute accordingly remains applicable to industrial disputes in such enterprises as come clearly within the purview of the Dominion Parliament, these undertakings being enumerated in the amending measure as including works carried on in connection with navigation and shipping; lines of steam or other ships, railways, telegraphs, canals, ferries, and other works extending beyond any one province; works operated by aliens; works declared to be for the general advantage of Canada or for the advantage of two or more of the provinces; and works of any company incorporated by or under the authority of the Parliament of Canada. The application of the Act is also defined as extending to any dispute which the Governor in Council may in apprehended national emergency declare to be subject to the provisions of the Act, and to any dispute within the exclusive control of the provinces which is brought within the scope of the federal Act by provincial legislation. The legislatures of six of the provinces, namely, British Columbia, Saskatchewan, Alberta, Manitoba, New Brunswick, and Nova Scotia, have taken advantage of this latter provision of the Industrial Disputes Investigation Act and have enacted enabling legislation by which the terms of the federal statute are made applicable to disputes of the classes named in the Dominion law and otherwise within the exclusive legislative jurisdiction of the province.

Although the Act applies directly only to disputes in the industries or trades specifically named therein, its machinery may be put into operation in the case of differences arising in any other industry or trade with the joint consent of the disputants. A few disputes of this nature are usually referred under the statute in the course of a year.

Machinery of the Act.—The general administration of the Act is placed under the Minister of Labour, and, since the enactment of the statute, the position of Registrar of Boards of Conciliation and Investigation has been held in conjunction with that of Deputy Minister of Labour.

Boards of Conciliation and Investigation are established by the Minister of Labour, usually on an application from one of the parties to the dispute. The minister has power, if he deems it expedient, to constitute a board on his own initiative. A municipal authority may also apply for a board. An amendment passed at the 1925 session places clearly upon the party desiring a change in wages and hours the full responsibility, in the event of a dispute occurring, for making application for a board.

Application forms are supplied by the Department on request; it is not necessary that application be made on these forms, but an application should be, in any event, accompanied by a statement setting forth (1) the parties to the dispute; (2) the nature and cause of the dispute, including any claims or demands made by either party upon the other, to which exception is taken; (3) an approximate estimate of the number of persons affected or likely to be affected by the dispute; and (4) the efforts made by the parties themselves to adjust the dispute. The law requires further that the application shall be accompanied by a statutory declaration setting forth that, failing an adjustment of the dispute or a reference thereof by the minister to a board, to the best of the knowledge and belief of the declarant a lockout or strike will be declared, and (except where the application is made by an employer in consequence of an intended change in wages or hours proposed by the said employer) that the necessary authority to declare such lockout or strike has been obtained.

When, however, a dispute concerns employees in more than one province, and such employees are members of a trades union

having a general committee authorized to carry on negotiations in disputes and so recognized by the employer, there is an alternative procedure, free from the necessity of obtaining authority to declare a strike, whereby a declaration may be made by certain union officials setting forth that, failing an adjustment of the dispute or reference thereof by the minister to a board, to the best of the knowledge and belief of the declarants a strike will be declared, that the dispute has been the subject of negotiations between the committee of the employees and the employer, or that it has been impossible to secure conference or to enter into negotiations, that all efforts to obtain a satisfactory settlement have failed, and that there is no reasonable hope of securing a settlement by further effort or negotiations.

A Board of Conciliation and Investigation consists of three members appointed by the Minister of Labour. One member is recommended by each of the disputing parties, and the third member, who is chairman, is secured if possible by joint recommendation of the two members first appointed. Failing a joint recommendation the chairman is selected and appointed by the minister. There is also provision for the selection and appointment by the minister of a member for either of the parties who fails or neglects to nominate a person for appointment as board member within five days after being requested by the minister to do so, or within such extension of that period as the minister may allow. Members of a board must be British subjects, though not necessarily residents of Canada.

On the constitution of a board the registrar forwards to the chairman the necessary documents and instructions. The sittings of the board are fixed as to time and place by the chairman, and the proceedings conducted in public unless the board, of its own motion or by request of any of the parties to the dispute, directs that they be held in private. The board may at any time dismiss any matter referred to it which it deems frivolous or trivial also it may, with the consent of the Minister of Labour, employ competent experts or assessors to examine the books or official reports of either party, and to advise upon any technical or other matter material to the investigation.

The Act gives the board the requisite powers for taking evidence, etc., and provides for the remuneration and payment of expenses of board members and witnesses, and for all clerical assistance. Procedure under the statute is on simple lines, and in practice the effort has been to free the tribunal so far as possible from the formalities of a court of law.

If the board by conciliation effort brings the disputants together and a working agreement results, a copy of the memorandum of the settlement, with a report of the proceedings, is forwarded to the minister. If a settlement of the dispute is not reached during the course of its reference to a board, the board is required to report fully thereon and to make such recommendations as it sees fit for the settlement of the dispute. If the board deems it expedient the report shall state the period during which the proposed settlement shall continue in force and the date from which it shall commence. This report is sent to the registrar, and, similarly, a minority report may be made by a dissenting member of the board. Copies of the reports and minority reports made by boards or members of boards are, in accordance with the requirements of the statute, furnished the parties to the dispute. All reports are also published, either verbatim or in summary form, in the LABOUR GAZETTE, the official monthly publication of the Department of Labour, and are given publicity in the press.

Railway Boards of Adjustment

While the Industrial Disputes Investigation Act has since its inception applied to all classes of railway disputes, save only in certain rare cases where a dispute might affect a railway within the exclusive jurisdiction of a province, certain classes of railway employees and the railway companies have established a tribunal through which many disputes have been adjusted, this body being known as Canadian Railway Board of Adjustment No. 1.

This tribunal was voluntarily formed in August, 1918, by agreement between (a) Canadian railways being members of the Canadian Railway War Board, afterwards the Railway Association of Canada, and comprising practically all railways of importance in Canada, and (*b*) six trades unions, namely, (1) Brotherhood of Locomotive Engineers, (2) Brotherhood of Locomotive Firemen and Enginemen, (3) Order of Railway Conductors, (4) Brotherhood of Railroad Trainmen, (5) Order of Railroad Telegraphers, and (6) Brotherhood of Maintenance-of-Way Employees. A new agreement, executed on April 15, 1921, is effective until amended or terminated "upon service of thirty days' notice by the one party upon the other." The board consists of twelve members, six selected by the Railway Association

of Canada and six by the executive officers of the organizations above named.

Under the terms of the agreement, decisions of the board are binding. In the event of a majority vote of the members of the board not being obtained, provision is made for the unanimous choice of a referee, or, in case of failure to agree, for the appointment of a referee by the Federal Minister of Labour. However, all decisions so far rendered by the board have been unanimous. The board deals with all disputes between the respective railway managements and their employees, members of the unions above named, concerning the interpretation or application of wage schedules or agreements and which have not been settled by direct negotiations. Disputes arising out of the negotiation of new agreements as to wages and working conditions or amendments thereto are now, however, embraced within the jurisdiction of the Canadian Railway Board of Adjustment No. 1, and several disputes of this nature have, since the creation of the board, been referred to Boards of Conciliation and Investigation under the terms of the Industrial Disputes Investigation Act. The Canadian Railway Board of Adjustment No. 1 also determines differences existing between railways and classes of employees not represntd on the board, provided joint submission of the case is made to the board by the parties concerned.

A similar tribunal, the Canadian National Railways Employees' Board of Adjustment No. 2, was organized on September 1, 1925, by agreement between the Canadian National Railways and its clerks, station, baggageroom and freight shed employees, roundhouse, shop and stores labourers (members of the Canadian Brotherhood of Railway Employees), for the purpose of disposing of grievances or disputes which might arise respecting the application, non-application or interpretation of agreements as to wages or working conditions. All disputes arising out of proposed changes in rates of pay, rules or working conditions are specifically excluded from the jurisdiction of the board. The board is composed of eight members, four of whom are selected by the railway management and four by the employees concerned. A majority vote of the full board is necessary for a decision, which is binding upon the parties, if no decision is reached, provision is made for the appointment of an arbitrator. The agreement is effective until cancelled by thirty days' notice given at any time by either party to the other. In November, 1925, the scope of the board was enlarged to include additional classes, namely, dining, sleeping and parlor car employees.

An agreement between the Railway Association of Canada and Division No. 4, Railway Employees' Department of the American Federation of Labour, governing rates of pay and rules of service for crafts in the locomotive and car departments of various Canadian railways, contains a provision that all grievances and disputes which cannot be adjusted directly by the railway officials and the employees' representatives shall be jointly submitted in writing to the Railway Association of Canada and to Division No. 4, Railway Employees' Department, American Federation of Labour, "for adjudication or final disposition." This arrangement has been in operation for several years.

The railways and employees participating in the above mentioned agreement are not exempted from the operation of the Industrial Disputes Investigation Act, but, since all the disputes going before these voluntary agencies for adjustment are settled, comparatively few disputes affecting the railway labour classes are now referred under the terms of this statute.

The Industrial Disputes Investigation Act, as previously mentioned, became law on March 22, 1907, and had therefore been in operation for twenty-three years at the close of the fiscal year 1929-30.

During this period applications under its terms reached the total of 730. Boards of Conciliation and Investigation were granted in 500 cases, leaving 230 disputes which were either settled by other efforts than those of a Board of Conciliation and Investigation or in which it was found that the machinery of the statute could not be utilized. Of the above mentioned 500 disputes, in each of which it had been declared on oath that a strike or lockout was believed to be impending, a cessation of work was averted or ended in all save thirty-eight cases. The number of applications for boards in the fiscal year above mentioned was 24, of these 15 were granted, and in no case was a strike not averted.

Provincial Acts

The province of Alberta has a Labour Disputes Act which provides for boards of investigation and conciliation in labour disputes within the legislative jurisdiction of the province and which are not covered by the provisions of the Federal Industrial Disputes Investigation Act. The appointment of boards of conciliation, constitution, procedure, functions, powers, etc., of boards are somewhat similar to these appointed under the Federal statute.

In Ontario there is the Trades Dispute Act, designed to prevent interruption in industry, and which provides for mediation in labour disputes by a Government official and also for (1) councils of conciliation and (2) councils of arbitration, where the parties to a dispute agree to have the matter submitted.

In Quebec there is also an act similar in its provisions to the Ontario Statute, which, however, does not include municipal employees. For this class of workers there is a special law, the provisions of which prohibit strikes or lock-outs until the matters in dispute have been submitted to a board of arbitration.

COMBINES INVESTIGATION ACT

Alleged Combine in the Plumbing and Heating Industry in Ontario—Prosecution Proceedings

PRELIMINARY hearings in the case of *Rex v. Singer et al* were commenced in the police courts at London and Windsor, Ontario, during the month of May. This action by the Department of Justice against members of an alleged combine in the plumbing and heating industry in Ontario was reported in the May number of the LABOUR GAZETTE, page 509, and judgments in two related cases, *O'Connor v. Waldron* and *Amalgamated Builders' Council v. Herman,* were quoted in the same issue at pages 613 and 614.

Hearings at London opened before Magistrate Scandrett on May 12, when eleven persons and one corporation pleaded guilty to four charges of violation of the Combines Investigation Act and to one charge of contravention of Section 444 of the Criminal Code. The four charges under the Combines Investigation Act dealt with combination to the detriment of the public in (1) limiting facilities for supplying and dealing, (2) fixing a common or a resale price, (3) enhancing the price, and (4) preventing or lessening competition or substantially controlling the trade, in relation to plumbers' and other builders' supplies or to services in connection with their installation. The remaining charge to which the above twelve pleas of guilty were entered was that of unlawful conspiracy to defraud the public or the Municipal Corporation and Board of Education of the city of London and others, contrary to the provisions of the Criminal Code, Section 444.

The accused who pleaded guilty were sentenced on the same day by the imposition of the following fines by the Magistrate:—

The Bennett and Wright Company, Limited	$10,000
Benjamin Noble	3,000
John Eggett	2,000
William Skelly	2,000
William T. Allen	1,000
James H. Bull	1,000
Alfred E. Gibbons	1,000
Thomas L. Partridge	1,000
Robert D. Paton	1,000
Alfred R. Pope	1,000
Christopher Teale	1,000
C. Russell Wright	1,000

An alternative sentence of six months' imprisonment was placed on each of the eleven individuals convicted. All twelve fines were imposed under the charge which alleged that the accused had entered into a combination against the public interest which had or was designed to have the effect of enhancing the price of plumbers' and steamfitters' supplies, in violation of the Combine Investigation Act. On the other charges to which the accused pleaded guilty, sentence was suspended, and four further charges against each of these accused parties, under Section 498 of the Criminal Code, were left in abeyance. On May 26 another London plumbing contractor, James R. Haslett, pleaded guilty to the charges on which the previous convictions had been registered, and was dealt with in the same manner, a fine of $1,000 being imposed.

Hearings in the case of 33 individuals and companies charged with being parties to the alleged plumbing combine in Windsor were continued before Magistrate Brodie in the Windsor Police Court on May 13, after an adjournment on May 5. Four charges under the Combines Investigation Act and four charges under Section 498 of the Criminal Code were laid against each of the 33 persons. The eight counts were similar to those laid under the same two statutes in the London prosecutions. The Windsor cases were adjourned on May 22, to resume on June 16. On May 26 hearings in London were resumed for three days. At the request of counsel for the defence the London proceedings were adjourned, to be concluded after the completion of the preliminary hearings in Windsor.

The Minimum Wage Board of Nova Scotia met this month for the purpose of considering the "budget" which will be used in fixing the minimum rates of wages to be fixed subsequently for female employees. It is expected that one of the first occupations to be covered will be in the laundry and dyeing industry.

LABOUR LEGISLATION ENACTED BY THE PARLIAMENT OF CANADA AND BY THE LEGISLATURES OF MANITOBA AND SASKATCHEWAN IN 1930

Parliament of Canada

THE Parliament of Canada during its recent Session which opened on February 20 and closed on May 30, 1930, enacted a law providing for fair wages and an eight hour day on Dominion public works and an amendment to the Criminal Code respecting sedition and the penalty therefor.

Fair Wages and 8-Hour Day on Dominion Public Works

The text of the Fair Wages and Eight Hour Day Bill, as it stood for third reading in the House of Commons, was printed in the LABOUR GAZETTE, April, 1930, page 383. No further amendments were made in the House, but in the passage of the Bill through the Senate a provision was added that regulations made under authority of section 5 should come into force fifteen days after the date of publication in the *Canada Gazette*.

Criminal Code Amendment

An Act to amend the Criminal Code re-enacts the section repealed in 1919 which provides that—

No one shall be deemed to have a seditious intention only because he intends in good faith,—

(*a*) to show that His Majesty has been misled or mistaken in his measures; or,

(*b*) to point out errors or defects in the government or constitution of the United Kingdom, or of any part of it, or of Canada or any province thereof, or in either House of Parliament of the United Kingdom or of Canada, or in any legislature, or in the administration of justice; or to excite His Majesty's subjects to attempt to procure, by lawful means, the alteration of any matter in the state; or,

(*c*) to point out, in order to their removal, matters which are producing or have a tendency to produce feelings of hatred and ill-will between different classes of His Majesty's subjects.

A further provision reduces from 20 years to 2 years imprisonment the penalty for speaking seditious words, publishing seditious libel or being a party to any seditious conspiracy. The penalty is now the same as it was previous to 1919. As first introduced this Bill contained a Section, No. 2, repealing Section 98 of the Code which was enacted in 1919 and which defines certain acts, words or publications as seditious. Section 2 was rejected by the Senate.

Manitoba

A number of laws of labour interest were enacted during the Session of the Legislature which opened on January 21, and closed on April 14, 1930. These included amendments to the Acts relating to workmen's compensation, mines, advance polls in municipal elections, vocational education, mothers' allowances, and old age pensions.

Workmen's Compensation

The Workmen's Compensation Act was amended to carry out the recommendations of the special committee appointed pursuant to an Order of the Legislative Assembly made during the 1929 Session, based upon a resolution previously made by the Law Amendments Committee to which had been referred during that session a Bill to amend the Workmen's Compensation Act. A summary of the committee's report was given in the LABOUR GAZETTE, February, page 110. The amending Act of 1930 contains all the provisions of the draft Bill which was appended to the report together with several clauses dealing with directors and their salaries.

An executive officer of a corporation is not included within the scope of the Act unless he is designated by name in the last payroll report submitted to the Board and request is made by the employer that he be included.

Payment of compensation will commence after three consecutive days from the date of the injury.

The clause dealing with compensation for accidents occurring outside of the province was amended by the addition of a proviso that a workman is deemed to be covered by Part I of the Act if his residence and his employer's chief place of business are in Manitoba and the industry in which he is engaged is an industry covered by Part I and he is, at the time of the accident, without Manitoba merely for some casual and incidental purpose connected with his employment within the province. In cases where a

workman so employed regularly spends some portion of his working time out of Manitoba the Workmen's Compensation Board is authorized to arrange with the employer and the Compensation Board of the Province in which he spends such time, the premium to be paid by the employer to each Board in order that the workman may be properly protected.

No compensation is payable for hernia unless it is a clinical hernia of recent primary demonstrability, and its onset can be shown to have been immediately preceded by a strain or other accident; and also that the workman immediately reported his condition to his employer or ceased work at the time and reported within seventy-two hours. If the chief medical officer of the Board orders an operation for cure the workman must submit to such operation within two weeks or compensation will cease to be payable at the end of that time.

If a workman or dependant claims compensation any right of action which he may have against a person other than his employer becomes vested in the Board immediately upon approval of his claim.

That section was repealed which denied compensation to a member of an employer's family unless he was proved to have been a bona fide employee at the time of the accident. A clause was added which provides that compensation shall not be payable to an employer or a member of an employer's family unless application to come within the scope of Part I has been approved by the Board. Whether a wage loss is suffered by the workman or not the Board may, on proof of the accident from the employer and medical attendant, pay for medical aid without formal claim thereto being filed by the workman.

The subsection providing for the payment by the Board of a fee of $2 to physicians furnishing medical certificates was repealed.

The section prohibiting the assignment, attachment, etc., of compensation payments was amended to except cases where such action is taken with the consent of the Board where the debt is for board and lodging.

The section dealing with suspension and diversion of compensation payments was the subject of a number of amendments. The clause permitting suspension in the case of a workman living an immoral life was dropped. Provision was made that the Board may wholly or partly divert compensation of a workman for the benefit of his wife and children, if the workman leaves Manitoba and his wife and children remain there without adequate means of subsistence, or, if he remains in Manitoba and fails to support his wife and children and an order of a court for maintenance or support or for alimony has been made against him. The Board is authorized to suspend compensation to a widow living an immoral life.

Compensation for broken dentures is provided where the breakage results from accidental injury arising out of and in the course of employment.

Fees for medical aid may not be more than would reasonably be charged to the workman himself and no action may be taken with respect to medical or dental aid for any amount larger than that fixed by the Board.

The employer is required at his own expense to provide immediate transportation for the workman to a hospital or other place where adequate care can be given, and for the necessary attendance on the journey.

Compensation payable to a widow is increased from $30 to $40 per month. Monthly payments to dependents are limited to 66⅔ per cent of the average earnings of the workman subject to a minimum of $12.50 per week in the case of a widow or invalid widower with one child or $15 per week in the case of a widow or invalid widower with two or more children.

The section which denied compensation to dependents resident in countries which were enemy countries during the Great War is repealed as from May 17, 1929. Employers are required to keep records showing the name of each workman, the dates and time worked and the wages earned.

The section requiring all employers who, in the opinion of the Board, are under the provisions of Part I to furnish signed statements on request was replaced by a section providing for such statements to be furnished by any person who, in the opinion of the Board, may be an employer under the provisions of Part I. The Board may require such statements to contain particulars of the payroll as well as of the nature of the different classes of work.

Those clauses were repealed which provided that when a capitalized sum representing outstanding claims for compensation at a certain date is transferred to the reserve from one of the classes the amount so transferred is to be taken as representing the total charge against that class in respect to these claims, the Board assuming the responsibility for any further claims, and that the amount so transferred belongs permanently to the reserve.

Another clause repealed provided that, if the workman, at or immediately before the date of disability, was employed in any pro-

cess mentioned in the second column of Schedule II and the disease contracted is that in the first column of the Schedule set opposite the description of the process, the disease shall be deemed to have been due to that employment unless the contrary is proved.

Group 42 of Schedule I is repealed. This group included the construction or operation of railways operated by steam, electricity or other motive power, street railways and incline railways but not their construction when constructed by any person other than the company owning or operating them.

The Schedule of industrial diseases was amended by the addition of conjunctivitis and retinitis, due to electro and oxy-acetylene welding, and occupational dermatitis and ulcerations and infections of the skin caused by harmful and noxious factors pertaining specifically to the employment carried on by the following classes of workers: abattoir and stockyard workers; boiler washers (steam); bricklayers; cement (Portland) workers; dyers (in clothes cleaning establishments); furriers and fur workers; lime workers; masons; metal platers including galvanizers and bronzers; plasterers (including lime whitewashers); painters (including paint mixers and French polishers); printers (including engravers, electrotypers and lithographers); tanners (leather) including hide-workers.

A worker in one of the above classes who has been disabled or required medical or surgical treatment on account of occupational dermatitis or occupational ulcerations or infections of the skin for three separate occasions or periods will after the lapse of twelve months from the beginning of the first period of disability be deemed unfit for the special class of employment in which he is engaged and no further similar claim for disability or other benefit may be made by him so long as he remains in that occupation.

Mines Act

The revised and amended Mines Act, which comes into effect on Proclamation, is wider in scope than its predecessor and applies to oil and gas wells, mines and quarries without regard to the number of persons employed therein.

Provision is made for the establishment of a branch of the Department of Mines and Natural Resources, to be known as the Mines Branch.

Those sections of the old law which authorized the Lieutenant-Governor in Council to make regulations for inspection of mines, protection of workmen, and governing the age, sex and hours of labour of employees are reproduced in the new statute.

The inspector is empowered to make necessary examinations and inquiries and to give notice to the owner of any thing which he considers dangerous or defective and to require it to be remedied within the time named in the notice. He may also order immediate cessation of work and the departure of all persons from the mine or any portion of it which he considers unsafe, or direct the taking of precautions. In addition he may exercise such other powers as he may consider necessary for ensuring the health and safety of all persons employed in or about mines, smelters, metallurgical or mining works.

Statistical returns made by owners or agents must show not only the number of persons employed below and above ground but must distinguish the different classes and ages of persons whose hours of labour are governed by the regulations. The average rate of wages of each class must also be shown.

A penalty of $20 per day during the continuance of the offence is imposed for pulling down or defacing rules posted by the owner or agent, for obstructing an officer in the discharge of his duty and for breaches of the Act for which no penalty is provided. An owner or agent guilty of an offence against the regulations or rules is liable to a penalty of from $100 to $1,000 and other persons so offending incur a penalty of $10 to $100. Where the offence is wilful default or negligence which might have endangered the safety of employees or caused serious accident or injury, imprisonment for three months may be imposed in addition to the prescribed fine.

Advance Polls in Civic Elections

A section added to the Municipal Act makes provision for advance polls in municipal elections. Such polls will be open from 5 p.m. to 9.30 p.m. during the three days immediately prior to the day next preceding the election. Persons desiring to vote at advance polls are required to make a signed declaration before the deputy returning officer and a penalty is provided for false declarations.

Technical Education

The Public Schools Act contains the same provisions as the former law regarding establishment of and grants to night schools and for manual, technical and industrial training. A section is included which relieves school districts in which technical instruction is given and their trustees and teachers from liability for accidents to pupils receiving such instruction, if proper precautions are taken.

Regulation of Camps, Etc.

The Game and Fisheries Act which comes into force on Proclamation forbids any person to act as guide for hire for hunting purposes unless he possesses a guide's licence which the Lieutenant-Governor in Council is authorized to grant. Licensed guides while employed as such may not kill or take game. Employees of labour camps may not permit the carcasses of any animal or bird covered by the Act to remain in the camp or vicinity. Persons employed in lumber camps or on the construction or maintenance of a railway or public work are forbidden to have firearms except by special permit. Resident employees are excepted provided they do not carry such firearms on hand-cars.

The Fires Prevention Act was amended to provide that where residents of a municipality are called out to fight a fire they shall be paid at a rate to be set by regulations of the Lieutenant-Governor in Council from funds provided for the purpose by the municipal council.

Labour Unions not Taxable

A clause added to the Income Tax Act exempts from taxation the income of labour organizations. The section dealing with exemption of employees' contributions to pension funds was redrawn.

Mothers' Allowances

The Child Welfare Act was the subject of a number of amendments some of which dealt with mothers' allowances. Allowances may now be paid in respect of normal children fourteen years of age and under and of mentally and physically disabled children above that age provided such children were born in Canada. Formerly allowances were granted only if the father was a British subject by birth or naturalization. The Director of Child Welfare is authorized to make a recommendation to the Child Welfare Board in the case of any child whom he finds upon investigation to be a "bereaved and dependant child" within the meaning of the law. Formerly the director was authorized to make a report only.

Old Age Pensions

A number of changes were made in the Old Age Pensions Act, by an amending statute which came into force by Proclamation on June 1, 1930. An application for a pension is to be made in the first instance to a local authority which will forward it, with its recommendation, to the Old Age Pensions Board whose decision is final. The Board, however, may reconsider any decision and may rescind, alter or amend any order, direction or ruling. The authorized amount of the levy upon the municipalities and upon the school districts in unorganized territories is reduced from the full amount to one-half the amount estimated to be required for the purposes of the Act after making proper allowance for the moneys payable by the Dominion. Pensions are exempt from Provincial and municipal taxation, are not subject to garnishment, attachment or any legal process, and are not assignable. Receipt of a pension does not, in itself, disqualify a person from voting at a Provincial or municipal election. The Board may recover from a pensioner any sum improperly paid and may also recover from the estate of a pensioner the amount of pension payments with interest at 5 per cent compounded annually. Claim for such latter recovery may not be made, however, against any part of the pensioner's estate which passes to another pensioner or to a person who since the granting of a pension or for the last three years of its payment has regularly made reasonable contribution to the support of the pensioner. The Board has a lien on all property in Manitoba for the amount of any debt due by the pensioner to the Board. The Board may also attach money due a pensioner.

Bills not Passed

Bills to amend the Minimum Wage Act, the Shops Regulation Act and the Fair Wage Act were introduced but not passed. The Bill to amend the Minimum Wage Act provided for the extension of the scope of that Act to include boys under the age of 18 years. The Bill to amend the Shops Regulation Act made provision for the closing of all classes of shops (except those exempted by the Act) from 12 o'clock noon on Wednesday until 7 o'clock on the following morning during the months of January to September both inclusive. The Bill to amend the Fair Wage Act limited its application to public buildings.

Resolutions

On February 3, the following Resolution was unanimously adopted:—

Whereas, general unemployment in the Province of Manitoba has brought distress to a large number of citizens; and

Whereas, resolutions were passed on January 23rd, 1923, and on February 7th, 1924, by the Legislative Assembly of Manitoba, to the effect that unemployment is essentially a national problem, and one which should receive the assistance, close co-operation and financial aid of the Government of the Dominion of Canada; and

Whereas, at a conference between representatives of Provincial Governments and the Government of the Dominion of Canada, held at Ottawa, September 5th, 6th and 7th, 1922, and at a similar conference held at Ottawa, September 3rd and 4th, 1924, resolutions to the foregoing effect were also passed; and

Whereas, for the following reasons the assistance, co-operation and financial aid of the Government of the Dominion of Canada is necessary in workiig out a solution of the problem of seasonal and general unemployment:

1. No Province or City can individually undertake to provide work for the unemployed during periods of depression without making that Province or City the "Mecca" for the unemployed located beyond its boundaries, and thus take upon its shoulders the problem of others.

2. That investigations reveal the fact that unemployment is greatly aggravated by the flow of new immigrants into Western Canada, many of whom have been admitted as agricultural labourers, and who have undertaken farm work for a short time only, or not at all, and who are now located in our urban centres, either unemployed or holding jobs that might otherwise have gone to some of those now unemployed. Since immigration into Canada is in the sole control of the Federal authorities, a problem which, to a great extent, is caused by immigration, is, therefore, one which demands Federal attention.

3. The placement services maintained by transportation companies have directed many of the new immigrants into other than agricultural work, and have been very active endeavouring to find jobs of any nature for men brought out. This has had the effect of depriving men already here from obtaining work available, and men are now stranded and on the hands of local authorities. This condition has been allowed to develop by the Dominion Government, which is a good reason why it should share in dealing with the problem created.

4. Many of the men who are unable to find work are in such a situation because of war experiences and war disabilities, even though not in receipt of pensions, and constitute an after-war problem and are a Federal responsibility.

And whereas, the Hon. W. L. Mackenzie King, Premier of the Dominion of Canada, wrote the Hon. John Bracken, Premier of the Province of Manitoba, a letter dated at Ottawa, on January 8th, 1930, which read in part as follows:—

"Should it appear that the provinces of the Dominion and their respective municipalities are not in a position to cope with unemployment within their respective jurisdictions, and we are so advised by the several provinces, we shall be prepared to consider what course it may be most advisable to take, in order to cope with a national problem of the kind."

Be it therefore resolved:—

1. That this House is of the opinion that unemployment is essentially a national problem, beyond the power of individual provinces to cope with satisfactorily, and we respectfully urge the Government of Canada to grant assistance, co-operation and financial aid to the Provincial and Municipal Governments in dealing with unemployment on an equitable basis.

2. That this House is of the further opinion, that unemployment of ex-service men is a national problem, and we respectively urge the Government of Canada to care for and assume responsibility as a national undertaking for the care of such persons.

A resolution on the subject of unemployment insurance, which was adopted by a vote of 23—6, is quoted on page 621 of this issue.

Saskatchewan

The Saskatchewan Legislature, which opened its session on February 6 and was prorogued on April 9, 1930, passed a statute providing for a weekly rest-day for certain employees and amended the laws relating to workmen's compensation, masters and servants, minimum wages, steam boilers, school attendance, electrical licensing, mothers' allowances and licensing of chauffeurs.

One Day Rest in Seven

The One Day's Rest in Seven Act, which became effective on May 1, 1930, provides for a rest period of at least twenty-four consecutive hours in every seven days (on Sunday when possible) for industrial workers, including employees of municipal corporations. The following classes of workers are excepted—watchmen, janitors or stationary boiler engineers; employees who are not usually employed for more than five hours per day; occupants of supervising, managerial or confidential positions; employees engaged in repairing or replacing equipment or machinery by reason of breakage or work of a similar emergency nature; and those employed during their period of rest for the sole purpose of maintaining fires, setting sponges in bakeries or feeding and attending animals where such work is part of their usual duties. The Minister of Railways, Labour and Industries is authorized to grant exemption for a period not exceeding one year on application of any employer against whom the enforcement of the provisions of the Act would, in the opinion of the Minister, work hardship.

The Act applies only in cities but the Lieutenant-Governor in Council is empowered to extend the application of its provisions to other portions of the province and may also withdraw any industry from the scope of the Act. Provision is made for inspection by officials or inspectors of the Department of Railways, Labour and Industries. A penalty of $5-$25 or a term of imprisonment not ex-

ceeding one month is provided for contravention of the law.

In order to facilitate the administration of the Act the words "persons whose work is mainly clerical" were eliminated from the list of exclusions in the definition of "workman" in the Workmen's Compensation Act. It was pointed out during the debate that clerical workers are not within the scope of the Act and that the words struck out had merely caused confusion.

Payment of Wages

The section of the Masters and Servants Act which prescribes penalties for a master guilty of neglecting to pay wages to, or ill-using or improperly dismissing a servant, is amended as from May 1, 1930, by striking out the clauses providing for distress and sale of the master's goods in default of payment of the prescribed fine.

Minimum Wages for Women

A section, which came into effect on May 1, 1930, was added to the Minimum Wage Act and provides that the Minister may require an employer to furnish a certified statement giving the name and address of every employee, the number of hours per day and per week worked by each, the amount of wages paid and any other information he may require. An employer failing to comply is liable to a penalty of $10 for each day of default.

Steam Boilers Act

The Steam Boilers Act was the subject of a number of amendments which went into effect on May 1, 1930. A candidate for a first-class certificate must be at least twenty-five years of age and if he qualifies as holder of a second-class certificate with twelve months' experience, such experience must be in operating a steam engine and boiler of at least 300 h.p. as assistant in the operation of a steam engine or battery of boilers of 500 h.p.

A candidate for a second-class certificate must now obtain 60 per cent of the marks obtainable on a written examination, have attained the age of twenty-two years, and, in addition either be holder of a third-class certificate with twelve months' experience as operator of a stationary steam boiler and engine of not less than 100 h.p., or as assistant in the operation of a steam boiler of not less than 300 h.p.; or satisfy the Minister of Public Works that he has operated a stationary boiler and engine of not less than 100 h.p. for at least four years or that he has served three years in a workshop in the manufacture or repairing of steam engines or boilers and has for a period of twelve months either operated a steam boiler and engine of more than 100 h.p. or acted as assistant in the operation of a steam boiler and engine of not less than 300 h.p. A second-class certificate entitles the holder to have sole charge of a boiler or boilers having a capacity not exceeding 500 h.p. in the aggregate or not more than 1,000 h.p. when used for heating purposes only or to act as assistant in the operation of a boiler or boilers of any capacity under an engineer holding a first-class certificate.

Candidates for a third-class certificate must be twenty-one years of age and must obtain 60 per cent of the possible marks in the examination. The minimum amount of experience required is, in all cases, twelve months instead of three months as formerly. This certificate entitles the holder to have sole charge of a boiler of not more than 200 h.p. or to act as assistant in the operation of a boiler or boilers of not more than 500 h.p. under an engineer holding a first or second-class certificate.

The holder of a provisional certificate may take sole charge of high pressure boilers not exceeding 100 h.p. when used for heating purposes only.

Education

The School Grants Act is amended as from January 1, 1931, to provide among other things, that a grant for a night school shall be 20 cents per pupil per evening session of not less than two hours but not exceeding $2 per session, provided that no vocational schools are in operation in the district.

An Act which comes into force on July 1, 1930, amends the School Attendance Act. A subsection is added providing that heads of schools shall make monthly reports to the school attendance officer regarding the attendance of each child between the ages of seven and fifteen years. School attendance officers may require medical certificates in cases where illness of the child is offered as a reason for non-attendance. A child may be excused from attendance at school if, in the opinion of the officer, he should be exempt from further attendance in the elementary grades.

Mothers' Allowances

The Child Welfare Act was amended as from May 1st, 1930, to provide for the granting of a mother's allowance to an applicant whose husband has not been heard of for seven years.

Licensing of Workmen

A number of changes, which came into force on May 1st, 1930, were made in the Electrical Licensing Act. The section providing that the Act should apply to certain classes of persons (contractors, journeymen, electricians, etc.) was replaced by a section providing that it shall apply to classes of work viz:—electrical wiring and the installation of electrical apparatus in buildings structures and mines, the inspection of such work and the sale of electrical equipment.

Applications for contractors' licenses are to be made to the Saskatchewan Power Commission instead of to the board of examiners. Journeymen must have four years' apprenticeship instead of three as formerly. In case the council of a city or town fails to take measures necessary for the enforcement within the municipality of the Act or regulations, the Commission may after seven days' notice in writing to the council take such measures as it deems expedient to secure such enforcement. A number of sections were redrawn and minor amendments made.

In the revision of the Vehicles Act which becomes effective on May 1, 1930, a number of changes were made in the provisions governing chauffeurs. An applicant for a chauffeur's licence must file with the Minister of Highways a certificate of good character furnished by the Secretary-treasurer, chief constable or police magistrate of the municipality in which he resides and a certificate of physical fitness, ability to drive and knowledge of the rules of the road furnished by an examiner appointed for the purpose and residing in the municipality in which the applicant resides, or, if none has been appointed for that municipality, the examiner of the nearest municipality. On application for renewal of his licence a chauffeur must file a similar certificate of character together with his chauffeur's licence for the previous year. Examiners may charge a fee not exceeding fifty cents for each examination. The sections of the old Act regarding badges are reproduced in the new statute. The minimum age at which a chauffeur's licence may be obtained remains unchanged at 18 years, except in cases where by special examination a candidate over 16 years of age proves his skill and capability to the satisfaction of the Minister. A chauffeur must carry his licence when he is in charge of a motor vehicle and produce it when required to do so by an inspector, traffic officer, police officer or police constable. A chauffeur convicted of a violation of the Act must also produce his licence for indorsement by the convicting magistrate. A person whose licence has been suspended or cancelled may not apply for or procure a new licence during the period of suspension or cancellation. A person convicted of a violation of the Act who is required to hold a licence but does not do so may be suspended from holding a licence for such period as the magistrate may deem just. The penalties for breaches of the law are unchanged.

Civil Service Superannuation

The Civil Service Superannuation Act was the subject of a number of amendments. A civil servant who has served for thirty-five years but has not reached the retiring age and whose allowance if he were superannuated, would be less than the maximum payable, may continue to contribute to the fund in which case the allowance granted on retirement is to be based on the number of years' service at that time. Any period of employment by the Government of Canada after January 1, 1907, is, if continuous with employment by the Government of Saskatchewan, to be taken into account for the purposes of the Superannuation Act. As from July 1, 1930, employment as a teacher in accordance with the provisions of the Teachers' Superannuation Act will also, in certain circumstances, be counted as employment by the Government of Saskatchewan. The Lieutenant-Governor in Council may authorize the payment of allowances to the widow and children of a civil servant with less than ten years' service who is killed in the performance of his duties. The widow of a civil servant or superannuate who has become a civil servant and retired receives only the allowance payable in respect of her husband's death or a superannuation allowance, whichever is the greater. If she is not entitled to a superannuate allowance she receives in addition to her widow's allowance a lump sum not exceeding her total contributions with accrued interest. The period of war service of any male civil servant, resident in Saskatchewan at the time of enlistment who served in the British or Allied forces is counted as employment in the Government of Saskatchewan.

An Act respecting Embalmers, which goes into force on July 1, 1930, is designed to organize, protect and regulate the embalmers' profession, setting up a board of examiners and providing for registration of embalmers.

Bill to provide for a Weekly Half-Holiday for Shop Employees in Certain Cities applied to cities having a population exceeding 7,000 and to all shops except those in the attached Schedule. The Bill was not passed.

SOLDIER LEGISLATION IN CANADA

Article by Mr. J. R. Bowler, General Secretary of the Canadian Legion, Contributed Upon Request

THE Session of Parliament just concluded has resulted in legislation of vital interest to ex-service men and their dependants. It may be stated that, since the termination of hostilities, Canada has made sincere and praiseworthy efforts to meet the obligation of the country in regard to its soldiers and their dependants, and in many respects, even prior to the present legislation, it can be truthfully said that Canadian soldiers have received treatment at least equal to that of any other nation. Notwithstanding this, however, there had developed during the past few years a steadily increasing volume of opinion to the effect that still further legislative and administrative provisions were necessary in order to ensure that degree of adequate justice so earnestly desired by Parliament and public alike. So that the question might receive the most careful and thorough consideration, the Government at the last session appointed a Special Committee of the House of Commons for the purpose of a complete investigation. This Committee, composed for the most part of men with splendid war records themselves and chosen from all parties, was ably presided over by Major C. G. Power, M.C., M.P. The Committee heard witnesses from all recognized Veteran organizations headed by Lt.-Col. L. R. LaFlèche, D.S.O., A.D.C., Dominion President of the Canadian Legion of the British Empire Service League, the unanimously chosen spokesman, and from all departments concerned. The subsequent legislation was directly consequent upon the recommendations made by this Committee.

The amendments to the Pension Act were of paramount importance. Heretofore, all applications for pension had been dealt with by the Board of Pension Commissioners, with a right of appeal in certain limited classes, i.e., on questions of attributability, to the Federal Appeal Board. It was made clear before the Committee that the establishment of these two Boards was not adequate to deal in a satisfactory manner with the large volume of applications constantly arising. Provision was, therefore, made which it is hoped and believed will provide each applicant with a full and complete hearing of his case before a competent body in his own locality; this to be accomplished by the setting up in various parts of Canada of Pension Tribunals. Application in the first instance will be made as heretofore to the Board of Pension Commissioners, but, in the event of that Board being unable to grant the application, instead of rejecting it, the Board will refer the application to the newly-constituted Veterans' Bureau for preparation and presentation to the Tribunal. In connection with the Veterans' Bureau, it is expected by this means to greatly extend the facilities for the preparation and presentation of cases.

An appeal from the decision of the Tribunal is provided to a new body known as the Pension Appeal Court. This Court will be located in Ottawa, and will hear appeals on the evidence and records. Its jurisdiction will extend not only to the question of attributability, but also as to the degree of any pre-enlistment disability, as to whether such pre-enlistment disability was obvious, etc., and as to the right to pension for any period prior to the date of application therefor. The decision of this latter body is final, but there is a provision that cases may be re-opened upon special leave being obtained.

In addition to the foregoing, a clause was enacted which provides that the applicant shall be entitled to the benefit of the doubt; that is to say, it shall not be necessary for him to produce conclusive proof of his right to pension but the Tribunal or Court shall be entitled to draw from the circumstances of the case the evidence adduced and medical opinions of reasonable inferences in favour of the applicant.

Provision is also made for representation by the Board of Pension Commissioners by its own counsel.

It is also provided that all cases heretofore disallowed, either by the Board of Pension Commissioners or the Federal Appeal Board, may be re-opened.

It is anticipated that this re-organized machinery will come into effect on or about October 1, 1930.

In addition to the provisions relating to new machinery, the Act also provides for restoration to pension of all men who elected to accept final payment and who still have a disability remaining. It is anticipated that several thousand men will automatically be benefited by this amendment.

The new Act will also bring substantial benefit to all widows married after the appearance of the disability, whose cases have hitherto remained unrecognized. The present provision is that all such marriages will be recognized, if contracted prior to January 1st, 1930. In such cases, the widow will receive pension

provided her husband dies from a war disability even though the marriage was contracted subsequent to the appearance thereof.

A further point of interest is that all time limits in respect to applications for pension have now been abolished.

The War Veterans' Allowance Act.—The bringing into being of the War Veterans' Allowance Act marks an important step forward in soldier legislation: namely, provision for soldiers who, although permanently unemployable by reason of mental or physical disability, are non-pensionable or who are in receipt of very small pension, or who have reached the age of 60 years. Those entitled to the benefits, subject to the conditions hereunder, are:—

(*a*) All C.E.F. men who have served in a theatre of actual war,

(*b*) All C.E.F. pensioners, including those who have accepted final payment on a basis of 5 per cent or more,

(*c*) All Imperial or Allied pre-war residents of Canada who were domiciled in Canada at the time of joining and who are pensioners, or have accepted final payment on a basis of 5 per cent disability or more.

The maximum amount payable under this Act to a bachelor or widower, without children, is $240 per year. Income in this case is exempted up to $125 per year.

To a married man or widower, with children, $480 per year with income exempted up to $250 per year.

In addition, casual earnings up to $125 per year are exempted. Pension clothing allowances and pension allowances for children are also exempted, and property on which the soldier resides not exceeding $2,000 in value is excluded.

Upon the death of a married soldier, the allowance may be paid to the widow or for the benefit of children up to a period of one year.

The Act provides that there must be residence in Canada for one year previous to the commencement of the allowance. There are other limiting provisions relating to hospitalization, etc., but generally speaking the foregoing sets out the main features of the Act.

It will be seen at a glance that this new legislation will beneficially affect large numbers of ex-service men, who have rendered valuable services to their country, yet who hitherto, through no fault of their own, have found it impossible to obtain employment in the general labour market, and have in many cases been the recipient of charity. It will ensure to this class a stabilized year-round income with resulting security, in place of spasmodic relief with its periods of hardship and destitution.

It is expected that the War Veterans' Allowance Act will come into operation on or about the first of September next.

In addition to this legislation, the time for making applications under the Returned Soldiers' Insurance Act has been extended until the 31st day of August, 1933.

Soldier settlers have also been substantially benefitted by an amendment to the Soldier Settlement Act, which will reduce their total debt by 30 per cent thereof over and above any amount allowed upon revaluation. It is expected that this amendment will affect between 11,000 and 12,000 families.

The foregoing resumé of soldier legislation passed this session is sufficient to show that a very earnest endeavour has been made to solve the difficulties with which ex-service men and dependants have been faced in the past. It should be explained that nothing more has been attempted here than a general outline, in which attention has been drawn to what are considered to be the main features of the new enactments. For greater detail and for information as to procedure, those interested should make application direct to the department concerned.

The "employees' suggestion" system carried on in the Canadian National Railways is referred to elsewhere in this issue. An investigation of this subject recently made by the National Industrial Conference Board (U.S.A.) showed the wide use now made of such systems in American industries. Increasing experience with these plans, it is stated, tends to bring about more or less uniform practice. For example, most plants of any size seem to find the committee method best for administering the system. A small committee is appointed which receives the suggestions and sees that they receive careful and just consideration. After rejecting those that are palpably impracticable or of no value, the others are discussed with those under whose supervision they would fall if adopted, and the attempt is made to determine their practicability and value. Another tendency is toward increasing the awards that may be won. Even if most accepted suggestions are not considered worth more than two to ten dollars, occasionally one is received which is worth much more and should be paid for adequately. Furthermore, the possibility of winning a high award is likely to stimulate greater effort to submit suggestions which are of real value, and this effort will raise the general level of suggestions submitted.

OLD AGE PENSIONS IN CANADA

Order-in-Council amending Dominion Regulations

THE following minute of a meeting of the Treasury Board approved by His Excellency the Governor General in Council on the 13th May, 1930 relates to the Regulations issued in 1927 on the recommendation of the Minister of Labour (LABOUR GAZETTE, February, 1928, page 138).

P.C. 311/991

The Board had under consideration the memorandum from the Honourable the Minister of Labour:

"Whereas the Old Age Pensions Act, being Chapter 156 of the Revised Statutes of Canada, 1927, provides by section 19 that 'the Governor in Council may, on the recommendation of the Minister of Labour and with the approval of the Treasury Board, make regulations not inconsistent with the provisions of this Act, with regard to the pensions herein provided for, and, without limiting the generality of the foregoing provision, may provide by regulation for *inter alia* the constitution and powers of an interprovincial board to interpret and recommend alterations in the regulations'; and

Whereas by Order in Council (P.C. 42/1232) dated the 25th day of June, 1927, the following among other regulations, was made: 'An Interprovincial Board is authorized to be established with powers to interpret and recommend alterations in the Regulations, such Board to be appointed by the Governor in Council'; and

Whereas by Orders in Council (P.C. 1806) and (P.C. 2260) dated the 3rd day of October, 1928, and the 14th day of November, 1929, respectively, the members of the said Board were duly appointed; and

Whereas the members of the said Interprovincial Old Age Pensions Board met in Ottawa on the 13th, 14th, 15th and 16th days of January, 1930, and submitted the following recommendations for amendments to the Regulations:—

1. That in Regulation No. 10 the words 'shall, in the absence of evidence to rebut such presumption' be struck out and that the word 'may' be inserted in lieu thereof.

2. That in Regulation No. 11 the words 'shall, in the absence of evidence to rebut such presumption' be struck out and that the word 'may' be inserted in lieu thereof.

3. That the following regulation be made and inserted after Regulation No. 12:

'13. Absence from Canada for a period of less than one month shall not be deemed to have interrupted residence therein.'

4. That Regulations 13, 14 and 15 be renumbered 14, 15 and 16.

5. That Regulations 16, 17 and 19 be rescinded.

6. That the following regulation be made as No. 17:—

'17. For the purpose of determining income regard may be had to the following:—

(*a*) annuity at the amount thereof;

(*b*) real property at the rate of five per cent of the assessed value thereof, exclusive of encumbrances;

(*c*) the amount of the annuity purchasable by the personal property of the pensioner after making due allowance for reasonable household furniture;

(*d*) salary, wages or other means of livelihood, whether in money or in kind, which the pensioner may reasonably be expected to receive;

and such other methods as may be deemed equitable.

7. That Regulation 20 be renumbered as 19 and the succeeding Regulations be renumbered accordingly, and

Whereas the provinces of Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, being the provinces with which agreements have been made under this Act, have consented to the amendments in the Regulations recommended above;

The Minister therefore recommends that these alterations be made in the Old Age Pension Regulations."

The Board concur in the above report and recommendation, and submit the same for favourable consideration.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

The Amended Regulations

Regulation No. 10, as now amended, reads as follows:—

10. An applicant may be presumed to have been resident in Canada for the twenty years immediately preceding the date of the proposed commencement of the pension if he (*a*) has actually lodged within Canada on at least

4,384 days within the said twenty years, and (*b*) has not within the said twenty years been absent from Canada for more than 731 consecutive days, but in no case shall a pensioner be deemed a resident of Canada for twenty years unless he lodged within Canada some time at least twenty years prior to making application.

Regulation No. 11, as amended reads as follows:—

11. An applicant may be presumed to have resided in the province in which the application for pension is made for the five years immediately preceding the date of the proposed commencement of pension if he is then residing in the province, and if he has lodged therein on at least 1,095 days in the said five years, but in no case shall a pensioner be presumed to be a resident of such province for five years unless he lodged within said province some time at least five years prior to making application.

Meeting of Interprovincial Board

The members of the Board who were present at the meeting of the Interprovincial Old Age Pensions Board, to which reference is made in the foregoing Order in Council, were as follows: Messrs. J. D. O'Neill, chairman, representing the Department of Labour; E. S. H. Winn, representing province of British Columbia; F. J. Reynolds, representing the province of Saskatchewan; Chas. K. Newcombe, representing province of Manitoba; Alex. Ross, representing province of Alberta; and D. Jamieson, representing province of Ontario.

Mr. W. F. Nickle, K.C., on behalf of the Canadian Patriotic Fund, requested that the Ald Age Pensions Board recommend that the Regulations be altered so as to permit that Fund to supplement the Old Age Pension up to such amount as the Fund considers necessary and that such contribution by the Patriotic Fund be not considered to bar the recipient from an old age pension. The Chairman of the Board was authorized to reply to Mr' Nickle stating that it was understood arrangements would be made between the Canadian Patriotic Fund and the various pension authorities concerned.

Mr. H. W. Macdonnell, on behalf of the Canadian Manufacturers' Association, presented an argument before the Board that old age pensions be paid to those who might be in receipt of an industrial pension and that the employer be permitted to supplement the old age pension up to the amount of the industrial pension the pensioner would otherwise receive, and that the payment of this additional amount as an industrial pension be not considered as a bar to old age pension. The Chairman of the Board was authorized to reply to Mr. Macdonnell that such procedure would not be consistent with the provisions of the Old Age Pensions Act.

A brief submitted by the National Order of Canada was considered by the Board and the Chairman was directed to advise this Order that it is not within the jurisdiction of the Board to recommend alterations to the Old Age Pensions Act.

The following resolution was passed:—

Resolved that, in the opinion of this Board, to provide by regulation that a person is entitled to a pension who has resided in the province in which the application is made or in that province and in another province with which an agreement under this Act is in force for the five years immediately preceding the said date, would not be consistent with the provisions of the Old Age Pensions Act.

The Board recommended the amendments to the Old Age Pension Regulation to which effect was given in the Order in Council quoted above.

Saskatchewan Research Council

The appointment of the members of the Saskatchewan Research Council was announced during May as follows:—

Dr. W. C. Murray, president of the University of Saskatchewan, Saskatoon.

Hon. J. T. M. Anderson, Premier of Saskatchewan, Regina.

Hon. J. A. Merkley, Regina, Minister of Railways, Labour and Industries.

Dr. James Creighton, Estevan, former Independent member of the legislature.

Dr. D. J. Brass, Yorkton, representing Boards of Trade.

Mr. George Williams, Saskatoon, president of the United Farmers of Canada, Saskatchewan section.

Mr. T. A. Wilson, Regina, representing the manufacturing industry.

Mr. William Darnborough, Laura, Sask., farmer.

Dr. M. A. Mackay, Tisdale, representing the lumber industry in the northern part of the province.

The council will have charge of all matters affecting scientific and industrial research and will undertake the promotion of the use of the natural resources of the province.

WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1929

ACCORDING to the annual report of the Workmen's Compensation Board of Nova Scotia for the year 1929, there was an increase of 1,737 in the total number of accidents, the total for 1929 being 10,086 as compared with 8,349 in 1928. The total cost of accidents during 1929, so far as could be estimated, was approximately $1,522,000.

Summary, 1917-1929.—The report contains a summary of operations under the Act since January 1, 1917, when the legislation came into effect. In the thirteen year period from the beginning of 1917 to the end of 1929, accidents in the industries within the jurisdiction of the Board to the number of 92,519 were reported. During that time 1,233 workmen were fatally injured. The amount actually paid to workmen or their dependents and for medical aid during the same period was $7,946,732.51, and the amount required at the end of 1929 for the purpose of paying life and other pensions and compensation to disabled workmen, and for medical aid, was $6,488,705.59. The total compensation paid or payable to workmen and their dependents and for medical aid for thirteen years amounts to $14,435,438.10. That amount does not, however, represent the entire cost of accidents for the thirteen year period, as the administration expense and cost of safety associations are not included. There were 652 widows to whom pensions for life or until remarriage were awarded; 1,531 children under sixteen years of age were awarded monthly pensions while under that age; dependent mothers and fathers to the number of 352 were awarded compensation; 30 members of the family other than widows, children and parents, but who were wholly or partly dependent upon the earnings of deceased workmen at the time of their respective deaths, received benefits; and life pensions were awarded to 3,037 workmen who were disabled, either wholly or partially, for life.

Prior to January 1, 1920, medical aid was not furnished to injured workmen except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and during the ten years that have elapsed the cost of medical aid was $721,265.92.

Accidents in 1929.—The 10,086 accidents reported to the Board for the year 1929 are classified as follows:—

Fatal accidents, dependency established and compensation commenced	55
Fatal accidents, burial expenses paid, no dependents	7
Fatal accidents, burial expenses paid or provisional payments made, dependency not yet established	1
Fatal accidents, claim non-compensable or disallowed	6
Accidents causing permanent partial disability	201
Accidents causing total disability for seven days or over	6,865
Accidents where medical aid only has been paid	2,125
Accidents pending adjustment, no payment	204
Accidents not compensable (other than fatal)	622
	10,086

Summary for 1929.—The report summarizes the financial statement for 1929 in the following paragraphs:

"In our annual report for the year 1928 the estimated deficit at the end of that year was $279,184.14. During the year adjustments were made in regard to assessments and claims, and at December 31, 1929, operations at the end of the year 1928 showed a surplus of $136,619.09. This difference was due to the fact that the Board decided that as the fishing sub-class was not under Part 1 of the Act (which covers the majority of the industries) the deficit in that sub-class should be carried to a special account. This deficit amounted to $381,004.98, and is shown in our balance sheet. The Board also decided that they would not charge interest on this deficit and for that reason the fishing sub-class would not be entitled to any interest credits or entitled to any part of the distribution of any surplus which might be found in the pension fund. The Board felt as regards the deficit which must eventually be paid out of the accident fund that no good purpose would be served by increasing the deficit as given above, viz., $381,004.98. During the year a re-arrangement and a re-grouping of industries was made in different classes. A number of industries had become depleted within the meaning of the Act, and the Board decided that the amount of any balances, whether credit or debit, with accrued interest, should be carried to a Reserve under Section 59 (1)(*a*). This fund as shown by our Balance Sheet amounted to $241,365.37.

"During the year 1929 the Board decided that a revaluation of our pension fund should be made as at December 31, 1928. This was done by our own staff and showed that the book value of our pensions at that date was

$4,331,293.74. The revaluation showed $3,986,631.11, indicating a surplus of $344,662.63. In view of this surplus the Board decided that $150,000 of this amount should be returned to the accident fund and distributed amongst the classes in proportion to the amount which had been contributed to the pension fund by each class.

"The amendment to the Act passed during the session of 1929 increasing compensation from 55 per cent to 60 per cent came into effect on and after January 1, 1930, with the exception of the lumbering industry, where the increase is effective on and after May 1, 1930. This meant a general increase of approximately 8 per cent over and above the present rates. The Board deemed it advisable on this account, and also due to the experience to increase the rates in some of the subclasses.

"For industries under Part 1 of the Act the total income for the year 1929, actual and estimated (including the amount of $150,000 taken from the surplus in the pension fund) was $1,623,160.58, and the estimated expenditure for the same period was $1,618,162.04, showing a surplus for the year's operations of $4,998.54. Taking into account the surplus from previous years as shown by Table 1, which amounts to $136,619.09 leaves us with a surplus of $141,617.63."

The amount in the disaster reserve fund at the end of the year was $667,538.96.

Benefit of Act to Workmen and Dependents.—During the past year, 6,865 workmen, wholly disabled for seven days and upwards, were paid compensation. At the end of the year the persons receiving compensation in the form of a monthly pension were as follows: widows, 460; children under sixteen, 890; dependent mothers, 77; dependent fathers, 36; other dependents, 28; workmen disabled for life (partially or wholly) 693.

Income and Expenditure by Classes.—The actual and estimated income and expenditure of the Board in respect to each class of industry under Part 1 of the Act according to the provisional statement of such to December 31, 1929, were as follows:—

Class	Income (actual and estimated)	Expenditure (actual and estimated)
	$ cts.	$ cts.
Mining	844,139 18	799,529 16
Lumbering and Woodworking	221,224 09	222,301 38
Iron and Steel	145,431 72	106,014 91
Manufacturing and Operating (not otherwise specified)	76,108 77	58,553 79
Building and Construction	95,585 35	122,555 56
Public Utilities	118,594 56	163,827 18
Transportation	121,964 65	145,287 80
Halifax Relief Commission	92 26	92 26
Total	1,623,160 58	1,618,162 04

Minors Under Workmen's Compensation Act of Quebec

The Workmen's Compensation Commission of Quebec recently announced that it had had considerable difficulty from time to time with respect to agreements and other documents signed by minors. A circular on this subject, issued by the Commission to employers in the province states as follows:—

"It is frequently alleged that the minor has signed without being aware of the importance of his action and without proper knowledge of the amount of the indemnity which he should receive. In a great many cases the minor makes an arrangement without consulting with his father or another person.

"Section 9 of the Workmen's Compensation Act, 1928, provides that a minor, 14 years of age or over, may alone recover the indemnities due to him under this Act. The Commission requests, however, that whereever possible, agreements or other documents of an important nature with respect to a minor's claim should also be signed by the father. In view of Section 9 of the Act the signature of the father is not absolutely necessary, and where difficulties exist or the father is not living, this procedure will not be insisted upon. We believe, however, that for the protection of all the interested parties and in order to avoid disputes later on, it would be to the advantage of the employer or insurer, to obtain the signature of the father when the injured person is a minor. We therefore request your co-operation in this connection."

MINIMUM WAGES FOR WOMEN IN ONTARIO IN 1929

THE ninth annual report of the Minimum Wage Board of Ontario details the administration of the Act during 1929. The Board claims that there is behind this enactment "the driving force of an unanimous public sentiment." It feels the necessity, however, of "crystallizing the minimum wage principle in legislation," pointing to the great disparities between wages and conditions of employment in different business establishments. The comment of the Board on this phase of the situation was as follows:—

"It is idle to talk of average wages in respect to the problem we face. An average wage may include and hide a shamefully low wage if it be counterbalanced by an uncommonly high wage. Thus the unsocial competitor is shielded by the worthy employer whose superior standards, and perhaps whose business success, he threatens. Nor do general comparisons of wages as between two cities or two provinces mean anything to our work. There are wages of all sorts in every city and in every province.

"There always tend to be unsocially low wages. In the ceaseless flux of modern business nothing remains at rest. This Board is in the same position as any manager of a store or factory, and must be on the job every day. Fresh situations are forever arising. Some firms are going out of business, while others are starting up. Some of the latter need to be taught that remorseless wage-cutting is not the only way to get ahead.

"We have also learned the truth of the ancient maxim, that a law is never better than its enforcement. Hence we have tried to work out methods by which, without developing a too elaborate and expensive system of inspection, we might extend this protection wherever it is needed in Ontario. By means of the collection, analysis, and correction of wage sheets we have attained this goal for a very large proportion of the hundred thousand women who are gainfully employed in Ontario. When we add to this prompt and effective dealing with all complaints we receive, in which we have the hearty co-operation of the Factory Inspection Department, we feel that our orders are known and obeyed within the provincial boundaries. No law is entirely without breach, but the standards prevail."

The minimum wage rates are established as a result of surveys of the cost of living in the various sections of the province. The cost of living budget of an average working woman in Toronto is first estimated as a basis for these calculations, the budget of the workers in other localities being adjusted in proportion to a recognized variation in the cost of living as between large and small cities, towns, villages and country districts. The budget for Toronto as reviewed to October, 1929, allows $364 per year, or $7 per week, for board and lodgings; $127 per year for clothing; $162 for sundries (including laundry, doctor, dentist, carfare, amusements, church, etc.), making a total of $653 for the year. The weekly budget for Toronto is, therefore, as follows: board and lodging, $7; clothing, $2.44; sundries, $3.06, making a total of $12.50 per week. The figure thus arrived at is taken as the minimum wage required to provide a female worker at Toronto with the necessities of living.

In enforcing the provisions of the Act the Board employs three chief methods. The first is to require the posting of cards, containing the wage orders of the Board in all factories, stores, laundries, hotels and theatres. It is the duty of the factory inspectors while on their inspections to report whether these cards are properly displayed. The second method of enforcement is through the investigation of complaints. Regular meetings attended by the chief factory inspector are held to review these complaints. During the year 24 such meetings were held and 379 complaints were dealt with and satisfactorily settled. The third method is based on an analysis of wage returns from firms employing women. Any apparent lack of conformity to the orders is taken up with the firm concerned. There were 410 such cases during the year out of a total collection of 3,850 wage sheets. All of these were either explained or rectified.

A feature of the Board's administrative work is the collection of wage arrears due to female workers. Fifty-two firms made such payments to 56 employees. The total amount collected was $1,349.47, of which the largest to any one worker was $100, the average being $22.31.

The Board has authority to allow lower wages to handicapped employees, or to suspend or vary an order in case of emergency. During the year, 87 such permits were issued. The report points out that the proportion of these special permits is "so small that the general levels of wages are not affected while jobs are saved for a considerable number who otherwise would be shut out from gainful employment."

During the past year three new orders went into force. Female employees in wholesale establishments, warehouses and the like were included within the office-workers order. Regulations were adopted respecting female operators of elevators. Also, seasonal factories engaged in canning, packing, evaporating fruits and vegetables were brought under an Order.

The accompanying table shows the average weekly wages and hours worked by female employees in the various industries in Ontario during the period covered by the report.

AVERAGE WEEKLY WAGES AND HOURS OF FEMALE EMPLOYEES IN VARIOUS INDUSTRIES IN ONTARIO, 1929.

Industry	Number of firms	Female employees		Average weekly wages		Average hours per week	Minimum wage (experienced adults)
		Over 18	Under 18	Over 18	Under 18

MOTHERS' ALLOWANCES IN ONTARIO IN 1929

THE ninth annual report of the Ontario Mothers' Allowances Commission for the year ending October 31, 1929, indicates a continued increase in the number of beneficiaries and also in the amount expended.

The Commission was established under the Mothers' Allowances Act of 1920, to adjudicate upon applications forwarded by local boards on behalf of mothers of two or more dependent children. The municipality in which a beneficiary has resided for one year is required to contribute one-half the amount of the allowance granted in each case, the remainder being paid by the province. The cost of administration of the Act also is borne by the province. The amount of the allowance is determined by the Board within limits fixed by regulation under the Act. The rate in cities is $40, $45, $50, and $55, per month for mothers with 2, 3, 4 and 5 children; in towns and country districts the rates are lower. The commision may grant an additional allowance for larger families. The commission is now composed of the following members; the Hon. David Jamieson, M.D., M.C.P.S. (former Speaker of the provincial legislature) chairman; Miss Belle Thompson, vice-chairman; Mrs. Minnie Singer; Lieutenant-Colonel T. J. Murphy, K.C.; and Mr. A. J. Reynolds.

The Commision considers that one of the most serious problems with which it has to deal is that of deserted mothers, and observes that if funds could be provided to bring back deserters and if adequate action were taken against them, the results achieved would "materially reduce the number of beneficiaries in this category."

Beneficiaries.—The number of families on the allowance list during the year was 6,411, and the number of children under sixteen in those families was 18,605, the average number of children per family being 2.90. As indicated by the statistics, the number of beneficiaries varies from month to month. On October 31, 1929, the last month of the financial year, there were 5,357 beneficiaries and the amount disbursed during that month was $196,450. These totals represent an increase of 220 in the number of beneficiaries and $8,514 in disbursements over the corresponding month of the previous year. The average monthly increase in the number of beneficiaries and the amount disbursed was 18.33 and $9,639.66, respectively. The disbursements during the fiscal year 1928-29 amounted to a total of $2,306,083, being an increase of $115,676 over the previous year.

As already stated, half the disbursements for mothers' allowances are borne by the province. The province also bears all the cost of allowances in unorganized districts, which, in 1928-29, amounted to $199,682. In addition, the province assumes full charge of any amounts made to those lacking one year's continuous residence in any municipality. The payments by municipalities during the year amounted to $1,045,784.

In the nine years since the Act has been in force, the net cost to the province is $8,823,-857, while the share of the municipalities durthe same period amounted to $6,721,067. Although the disbursements throughout the year were greater, the cost of administration again shows a slight decrease over the previous year, being 3.46 per cent as compared with 3.5 per cent.

Of the 6,411 families receiving allowances, 3,123 were in the cities, 3,200 were in the country, and 88 in towns. The average number of children in these families was 2.75 in the cities, 3.05 in the country, and 2.70 in the towns.

Of the total of 6,411 families which received allowances the death of the father was the cause of dependency in 4,503 cases. In addition there were 1,243 cases where the father was totally incapacitated. Desertion was the cause of dependency in 407 cases, while in 258 cases both the mother and father were dead and the children were in charge of a foster parent.

Of the total number of beneficiaries, 64.45 per cent were Canadian; 26.67 per cent were other British; and 8.88 per cent were of foreign birth.

TEACHERS' PENSIONS IN ONTARIO

A RECENT statement on the Teachers' and Inspectors' Superannuation Fund of Ontario indicates that the fund is in a satisfactory financial position. Since the Teachers' and Inspectors' Superannuation Act came into operation on April 1, 1917, approximately 1,050 teachers have been pensioned under its provisions. The Act provides for the establishment of a fund, known as the Teachers' and Inspectors' Superannuation Fund, to the credit of which the Treasurer of the Province places sums equal to those contributed by the teachers and inspectors. Ever since April, 1917, every teacher and inspector in a public or separate school, high school, collegiate institute, normal or model school, or observation school attached to a faculty of education has been required to contribute 2½ per cent of his or her salary. Teachers employed in the Ontario School for the Deaf and the School for the Blind, or in an industrial school, or in classes held in connection with any public institution supported wholly or in part by contributions from the province or municipality, are also included in the provisions. If the salary of any teacher is less than $550 per year, it is taken as $550 for the purposes of the Act with the contribution and pension adjusted in proportion.

There are three classes of pensioners: (1) Class A, comprising those who have retired after completing at least 40 years of service; (2) Class B, comprising those who have retired after completing 30 years of service, and who are retiring in good health; and (3) Class C, those who have completed at least 15 years of service, but less than 40 years of service, and who have become incapacitated through ill health for further service.

Benefits.—The pension allowance in all three of the above mentioned classes is equivalent to one sixtieth of the average salary for the last ten years of employment multiplied by the number of full years during which the teacher was employed. The years during which a teacher has contributed to the fund are considered as full years of employment, but the years completed prior to April 1, 1917 (when the Act came into effect) are counted each as a half year of employment. Other benefit provisions as set forth in the Act are as follows:—

Contributions to any municipal or school board fund made prior to April 1, 1917, and paid over to the Fund shall be considered as contributions to the Fund.

If the amount of the annual payment to the teacher or inspector as determined is less than $365, the amount payable annually to the teacher or inspector may be $20 for each year of service, but not exceeding in the whole $365.

If the amount of such annual payment as computed is more than $1,000 the amount of the annual payment shall be $1,000, but if at the time of his becoming entitled to such a maximum allowance, the teacher or inspector has paid into the fund a sum sufficient to purchase at Dominion Government rates a life annuity of a greater amount than $1,000 per annum, the annual allowance payable to him under this Act shall equal the amount of such annuity.

Provision is also made for transference of superannuation of such teachers who were formerly eligible under the Public Schools Act to the new enactment if they so elect.

Upon the death of a teacher or inspector while engaged in the profession, personal representatives of such are entitled to receive a sum equal to the total amount contributed by such teacher to the fund with interest at four per centum per annum compounded half-yearly.

A teacher or inspector withdrawing from the profession after having been employed for at least five years is entitled to receive all personal contributions made to the Fund together with interest thereon at the rate of four per centum per annum from the date of retirement.

All claims for superannuation must be first approved by a commission consisting of five members appointed and elected triennially as follows:—

(*a*) An actuary and two other persons appointed by the Minister;

(*b*) Two teachers or inspectors who are members of the Ontario Educational Association, elected at the annual meeting of such Association, by the teachers and inspectors present and voting thereat.

NATIONAL RESEARCH COUNCIL

THE latest annual report of the National Research Council describes the wide range of scientific inquiries already carried on under the provisions of the Research Council Act of 1924. The Council has charge of all matters affecting scientific and industrial research in Canada and all questions of scientific and technological methods affecting the expansion of Canadian industries or the utilization of the natural resources of Canada. An outline of the activities of the organization during the financial period 1928-9 is given by the president, Dr. H. M. Tory, as follows:—

The activities in which the Council has been engaged during the year under review may be broadly divided under the following main headings:—

1. The prosecution of research work through the awarding of assisted research grants to qualified research men working on individual problems in established laboratories;

2. The training of research workers through the awarding of post-graduate scholarships in science and research.

3. The co-ordination of research work on problems of major importance by means of national conferences between the leading Canadian authorities on such problems.

4. The organization and prosecution of co-operative investigations in connection with major research projects through associate research committees;

5. The establishment of National Research Laboratories.

There were in active operation during the year under review, in laboratories spread from the Atlantic to the Pacific ninety-one specific investigations. These researches were carried out under grants awarded by the Council to an associate committee directing a major research or to an individual investigator specially qualified to undertake the research work entrusted to him. These investigations were carried out in twenty-five divisions of science at eleven Canadian universities and in fourteen Government and industrial laboratories.

The laboratories in which these investigations were carried out were as follows: Universities of British Columbia; Alberta; Saskatchewan; Manitoba; Western Ontario; Toronto; Queen's; McGill; Montreal; Dalhousie; Macdonald College; Connaught Laboratories; Queen Alexandra Sanatorium; Fort Qu'Appelle Sanatorium; Federal Departments of Agriculture, Mines and National Defence; Board of Grain Commissioners, Winnipeg; Steel Company of Canada; Biological Board of Canada.

In addition to the work just described, there were in operation during the year fifty research scholarships awarded by the National Research Council in order to build up in Canada a corps of research men competent to undertake independent research work on scientific and industrial problems. Each person who is successful in winning one of these scholarships is placed under the personal supervision of an approved member of the staff of the university where the scholarship is held. Such scholarships have been awarded by the National Research Council for the past twelve years, and section 4 of this report, beginning at page 76, gives full information regarding these scholarships and what has been achieved through them.

"With the object of co-ordinating research work in Canada, the National Research Council has consistently followed a policy of bringing together in conference outstanding persons interested in and working on related projects of major importance, with the object of avoiding unnecessary duplication of work and also of stimulating existing research activities. Such conferences are requested, first, to discuss the present state of knowledge on the subject under consideration, and then in the light of this discussion, to draft a complete and specific research program on the problem under review. The Council invites to such conferences representatives of the Federal and Provincial Government departments, the universities, scientific institutions and societies, and outstanding individuals known to be interested in or working on the problem under consideration. A considerable number of such scientific conferences have been held and specific research programs worked out and put into operation as co-operative enterprises under associate research committees which are then appointed by the Council to co-ordinate and direct the work."

The National Research Council expended during the year under review a total sum of $323,112.24. The distribution of this expenditure among the various activities and services of the Council was as follows:—61·2 per cent of the total was expended in research work carried out by associate committees and under assisted research grants; 13·5 per cent was expended on post-graduate scholarships; 1·3 per cent was expended in the publication of scientific papers and the scientific library maintained by the Council; 4·1 per cent was expended for travelling and other expenses in connection with meetings of associate committees; the entire administration of the Council including associate committees cost only 4·2 per cent and 2·7 per cent was expended on travelling expenses of the members and staff of the National Research Council; the balance amounting to 13 per cent was expended on salaries of the staff of the Council.

CANADIAN ENGINEERING STANDARDS ASSOCIATION

THE Canadian Engineering Standards Association has published its Year Book for 1929, showing the progress made in the work of engineering standardization in the Dominion. The Association, which was formed in 1919, is organized on a basis similar to that adopted by the British Engineering Standards Association. The members serve on its various committees gratuitously, giving it the benefit of their technical or business experience in the preparation of the various standards.

It is pointed out that the Association does not assume the role of a dictator, but rather that of a co-operative body, and must therefore be guided in its operations by the requirements of the manufacturing or industrial interests represented on its committees. It endeavours, however, to follow as closely as practicable the standards prepared by the British Engineering Standards Association, but in many cases, on account of established business interests, it must be guided by standards which have already been adopted. Where these standards are in general use, the Association does not prepare new standards covering the same ground unless revisions, which would make the specifications more adaptable to Canadian conditions, seem advisable. In all cases, therefore, C.E.S.A. Specifications are drafted to meet the particular requirements and operate in the best interests of Canadian industry so that they may be adopted as Canadian Standards.

Conditions in Canada are stated to be peculiarly favourable to the operations of an organization such as the Canadian Engineering Standards Association, for the reason that industrial standardization is only in its infancy and the development of "simplified practice" has never been seriously attempted. In Great Britain the work of the British Engineering Standards Association is being extended more and more into the field of Simplified Practice and the benefit to industry has been remarkable.

In Australia the work of standardization and simplification is now being carried on by the newly organized Standards Association of Australia. In the United States the work of National Standardization is handled by the American Standards Association, but Simplified Practice comes under the jurisdiction of the Department of Commerce. There are now two Assistant Directors of the Bureau of Standards, one in charge of Research and the other in charge of Commercial Standards. In Canada, however, Industrial Standardization and Simplified Practice are handled by one organization, namely the C.E.S.A.

During 1929 there has been a great increase in the number of enquiries for information on specifications not only in Canada, but also in Great Britain and the United States, and it is therefore evident that interest in the work which the Association is doing is covering an increasingly large field.

The Canadian Electrical Code is still operating in the provinces of Nova Scotia, Quebec, Ontario, Saskatchewan and British Columbia. In New Brunswick the Code has now been adopted by nine cities and towns and representations are being made to the New Brunswick provincial government to encourge the adoption of the Code in that province. In Alberta the Canada Electrical Code has been adopted under the Electrical Protection Act and is, for the present, being administered by the Workmen's Compensation Board. A report has been received from the Bahamas, B.W.I. that the operation of the Canadian Electrical Code has been most useful in raising the standard of Electrical Installations.

Other standards already adopted are for single-phase distribution transformers; for specifications for steel highway bridges; for concrete and reinforced concrete; for steel billets, bars and shapes; bar steels, for carbon steel castings; for machine screws, etc.

The United States Senate has passed Senator Wagner's bill to which reference was made in the LABOUR GAZETTE, March, 1930 (page 258), to create a nation-wide system of free public employment exchanges. The bill appropriates $4,000,000 for aid to states which vote an equal amount to support such exchanges. They are to be conducted according to a uniform plan, and are to report regularly in such a way that the statistics will be comparable on a national basis. The bill also provides for such action as may be necessary in the interstate transportation of surplus labour.

In Baltimore City, in 1929, the industrial inspectors found employed in 8,328 establishments 61,697 women, including both those who come under the jurisdiction of the laws governing the hours of labour for women and those who do not. In the manufacturing industries 51·6 per cent of the total number of women were found employed; 8·9 per cent were working in the mechanical industries; 30·7 per cent had obtained employment in the mercantile trades; and 8·8 per cent were engaged in offices.

CANADIAN MANUFACTURERS' ASSOCIATION

Fifty-Ninth Annual Convention, Toronto, June, 1930

The 59th annual general meeting of the Canadian Manufacturers' Association was held at Toronto on June 2-5, the delegates including representatives of industries in every province of Canada.

Mr. R. J. Hutchings, in his opening presidential address, outlined the existing industrial situation throughout Canada, giving also a sketch of the progress of industry in Canada since the founding of the association in 1871, and concluding with a forecast of the industrial future of the Dominion.

"Business during the past two decades in Canada," he said, "has encountered a variety of economic weather; the restriction of programs of railroad building and land settlement; the war period; the inflation and deflation following the war; the adjustment of the world to new conditions; the prosperity of 1928 and 1929, in which we shared; and, now, a quiet period, accompanied by declines in the prices of basic products, such as zinc, copper, lead, coal, oil, cotton, wool and wheat. For nearly a year production has been slowing in Canada and we have experienced considerable unemployment, which, although relieved by new spring and summer work, is still a problem to some extent. We have been and are experiencing one of those lulls, for which numerous and lengthy explanations are always made, but which are, nevertheless, to a certain degree, incapable of complete solution. While the recession in business has been severe, conditions have not reached the low levels of depression which have been experienced at various times in the history of this country. We can all remember worse conditions than those of the past year.

"Great efforts have been and are being made by manufacturers in all parts of Canada to maintain employment. Some plants manufactured for stock; others took the opportunity to repair and overhaul their plants; a great many in order to retain employees are working several days or half days in each week with complete staffs instead of full time, with partial staffs. Of course, there are limits to all these expedients; banks must have their loans; employees must have their wages, taxes must be paid, and unless goods are being sold in sufficient quantities to meet all these demands, there is no alternative but to reduce expenses, even if this includes laying off some employees. Manufacturers are often exhorted by well meaning persons to maintain their staffs, irrespective of whether they are selling goods or not, but reasonable people know that a factory, for example, which is paying out ten thousand dollars a day for wages, cannot go on very long unless it is selling its products. It must be remembered that there is no law to compel consumers to buy goods."

Mr. Hutchings proceeded to sketch the history of the industrial development of Canada during the past fifty years, emphasizing in particular the growth of industry in Western Canada, with which he has been personally identified. He stated that the relationship between industry and agriculture are steadily improving.

In reference to the mining industry the President looked forward to the time when the manufacture of Canadian minerals would be completed in Canada: "Great progress has been made," he said, "during the past few years in this regard by several great combined mining and industrial companies, members of this association, in British Columbia, Northern Alberta, Northern Saskatchewan, Northern Manitoba, Northern Ontario and Northern Quebec. . . . The development of the mines has supplemented industrial growth and their problems are much the same as ours. Our common expansion will help to solve the vexed question of winter employment and will also provide additional markets for farm products which are meeting with increasing difficulties in finding export markets."

Mr. Hutchings next dealt with the subjects of the tariff, national wealth, transportation and the progress of commercial aircraft. Discussing the relations of science and industry he emphasized the importance of industrial research. "Machinery," he pointed out, "always constitutes a problem in relation to employment. Since the first use of machines this has been true. A new machine displaces hand labour at first, afterward it creates opportunities for employment. Sometimes the machines overrun demand and must slow down until excess supplies are consumed. As the use of machinery grows, working days become shorter, arduous hand labour diminishes and life becomes easier. Modern civilization could not last without machines. This is especially true of Canada, a country of great distances, severe and changing climate, and relatively small population. Most of our daily wants are supplied by machines, and we should make our own so that we can control production.

"Considerable progress has been achieved during the year in industrial research problems by the National Research Council, the Ontario Research Foundation, the Research Councils of Alberta, Saskatchewan and Manitoba and by the universities and private laboratories. Many

of our members now have industrial laboratories which compare favourably with any other in the world."

On the subject of immigration the President said that immigrants should be predominantly of British and French origins, including those repatriated from the United States. Of other racial origins, those of Northern Europe should be preferred. "We should not swing from the extreme policy, usually followed in prosperous times, of trying to expand the volume of immigrants by advertising and other forms of persuasion, to the other extreme, usually adopted in time of depression, of trying to exclude many who would be desirable. Only immigrants should be admitted who will make good citizens and who, after reasonable time, will be able to maintain themselves and to contribute to the progress of the country."

Mr. Hutchings concluded his address as follows:—

"There was considerable social legislation enacted and also measures proposed during the year, following the trend of the past decade. Motives inspiring its advocates are humanitarian in part at least, and these are admirable if they are not pressed too far, in which case they defeat their own objects. Industrial legislation, in so far as it decreases output and increases costs, must be borne by the buyers of goods, who include nearly everybody. These burdens are particularly heavy on agriculturists and others to whom eight-hour days, minimum wages, workmen's compensation, and similar measures do not apply, but who have to help pay the costs of these in the goods which they purchase.

"Industrial relations between employers and employees are wholesome in Canada and have been improving steadily for some years. Their interests are common and cooperation will secure more benefits than disputes. Many industrial concerns are limited liability companies and employees can buy as much stock as they want and thus become part owners. Other companies have made special arrangements for employees to acquire stock. Employees are consequently becoming acquainted with manufacturing, and are realizing that wages and hours are only part of its problems.

"What of the future? All realize that conditions are not as good as in the immediate preceding years. We know that this depression, like all previous depressions, will pass. There are already visible certain encouraging signs of improvement. When prosperity will return in full tide is impossible to forecast. The cooperation of all is necessary now, as at other times. Governments can help by formulating and maintaining with the highest possible measure of stability, wise policies. After that, individuals will have to work out their own destinies, with the aid of the qualities of adventure, initiative, courage, intelligence and thrift.

"I submit that our history, as indicated briefly to-day, associated with a reassuring survey of the character and intelligence of our population, and the natural wealth of the country, should give inspiration to all Canadians for the future."

Officers Elected

Officers for the ensuing year were elected as follows:—

President: Mr. Elmer Davis, Kingston, Ontario.

First Vice-President: Mr. W. H. Miner, Granby, Quebec.

Second Vice-President: Mr. W. C. Coulter, Toronto, Ontario.

Treasurer: Mr. T. F. Monypenny, Toronto, Ontario.

Mr. J. H. Walsh, is the General Manager, and Mr. J. T. Stirritt, the General Secretary of the Association.

The report of the Industrial Relations Committee, which was adopted by the Convention, was as follows:—

Report of Industrial Relation Committee

The report of the Industrial Relations Committee, signed by Messrs. L. L. Anthes, Chairman, J. E. Walsh, general manager, and H. W. Macdonnell, secretary, contained recommendations regarding unemployment and unemployment insurance, health insurance, and other subjects of interest to labour. The report of this Committee, which was adopted by the Convention, is as follows:—

Twelfth Session—International Labour Conference

"The 12th session of the International Labour Conference convened at Geneva on the 30th May, 1929. The employers of Canada were represented by Mr. W. C. Coulter, President of the Booth-Coulter Copper & Brass Co., Limited, Toronto, a past Chairman of the Committee, who had as his adviser Mr. G. E. Carpenter, Secretary of the Association's Prairie Division. The Canadian Government was represented by Dr. W. A. Riddell and Mrs. Mary Smith, a former member of the British Columbia Legislature, who had as their advisers, three representatives of labour. Canadian labour was represented by Mr. P. M. Draper, of Ottawa, who had as his adviser, Mr. James Simpson, of Toronto. Fifty-five countries were represented by 161 delegates and 235 advisers, a total of 396.

"The principal items on the agenda and the action taken thereon were as follows:

"(1) *Prevention of Industrial Accidents*—There were passed two resolutions embodying principles and rules for the prevention of accidents in industry and agriculture and for the guarding of power-driven machinery, a draft convention concerning the marking of the weight of packages transported by vessels, and finally a resolution calling for uniformity in the compilation of industrial accident statistics. The employers' objection to agricultural and maritime occupations being covered, on the ground that they had not been mentioned in the questionnaires to the Governments, was disregarded.

(2) *Protection of Dockers*—A draft conventioin was adopted containing detailed provisions for the protection against accidents of dockers, and a resolution calling for consultation with employers' and workers' organizations in the drafting of regulations.

The employers' objection to other than ocean vessels being covered, on the ground that only ocean vessels had been mentioned in the questionnaires to the Governments, was disregarded.

(3) *Forced Labour*—This question it was decided should be put on the agenda of the 1930 Conference and a draft questionnaire to the Governments was drawn up.

(4) *Hours of Work of Salaried Employees*—This question it was decided to place on the agenda of the 1930 Conference and a questionnaire was drafted tending to the adoption of a draft convention for the international regulation of the hours of work of salaried employees. This decision was strongly opposed by the employers but without avail.

"In reporting on the Conference, Mr. Coulter called attention to the fact that the chief industrial provinces of Canada, viz., Ontario and Quebec, have in recent years failed to make full replies to the International Labour Office questionnaires, with the result that the Canadian Government delegates are found voting at the Conference on the basis of replies sent by the least industrial provinces. Following Mr. Coulter's report this matter was taken up with the Ontario and Quebec Governments with a view to impressing upon them the desirability of their making, in future, full replies on all matters affecting industry.

Thirteenth Session—International Labour Conference

"The 13th Session of the International Labour Conference, on purely maritime questions, convened at Geneva on the 10th of October, 1929. The employers of Canada were represented by Mr. A. L. W. McCallum, manager of the Shipping Federation of Canada, Montreal. At the outset of this Conference a difficult situation arose owing to the fact that the British shipowners, who control about 50 per cent of the world's shipping, were not represented. This was due to their dissatisfaction with the workers' delegate chosen by the British Government, who belonged to the Dockers' Union, but did not represent the National Seamen's Union, the seamen's organization most representative of the maritime workers. It was not until assurances were given that in future the selection of labour delegates would be more in accordance with the Peace Treaty, that the employers' delegates agreed to attend the Conference.

"The items on the agenda and the action taken were as follows:

"(1) *Hours of Works on Board Ship*—A questionnaire—drafted, in spite of the opposition of the employers, in terms of an eight-hour day—was drawn up to be submitted to the various Governments. Questionnaires were also approved on (*a*) seamen's welfare in ports (*b*) protection of seamen in case of sickness (*c*) establishment of minimum professional standards for sea captains, navigation officers, etc. The last two were opposed by the employers' group on the ground that they were not questions which came within the scope of the International Labour Conference.

"It remains to add that when the questionnaires have been replied to by the various Governments, another maritime conference will be held at which the passing of draft conventions and recommendations will be considered.

Fourteenth Session—International Labour Conference

"The 14th Session of the International Labour Conference will be held at Geneva, Switzerland, commencing on the 10th of June. Among the items on the agenda are (1) hours of work of salaried employees; (2) hours of work in coal mines; (3) forced labour; (4) the Director's report regarding the working of the eight-hour day, etc.

"The employers of Canada are to be represented by Mr. J. H. Roaf, Past Chairman of the British Columbia Division, with Mr. H. W. Macdonnell of the Head Office as adviser.

Workmen's Compensation

"Substantial increases in benefits have during the year been demanded in Manitoba and Ontario. These included increases in the

scale of compensation from 66⅔ to 75 per cent and in the wage base from $2,000 to $2,500. There was also the demand in Ontario that in certain cases compensation should continue until the injured man had secured work equally remunerative with what he had before the accident. These increases were all strongly opposed both in Manitoba and Ontario, with the result that the only change made was an increase in the Manitoba benefit to widows, bringing it up to the Ontario figure of $40 a month.

Health Insurance

"Your Committee finds that there is growing interest among employers in the subject of health insurance. A special commission appointed by the British Columbia Government in a recent interim report stated that an overwhelming majority of the employers of the province, including 90 per cent of the manufacturers, are strongly in favour of the introduction of a system of state health insurance. Experience in England, Germany and the United States shows that sickness causes more lost time than all other causes put together—it is said to cause five times as much as accidents. The cost to the community both directly, by way of expenditure on hospitals and medical services, and indirectly, by way of loss of productive capacity, is estimated, for Canada, at 300 million dollars. In view of the fact that a very large proportion of this could be saved, if for the present haphazard system there were substituted a system of state health insurance contributed to by employees, employers and the state, and primarily directed not so much to relief, as to cure and, above all, to prevention, of sickness, your Committee feels that the question is one which should engage the attention of all members of the Association.

Thirteen Month Calendar

"It will be recalled that at the 1928 Annual Meeting of the Association a resolution was passed favouring a change from the present calendar of 12 months of unequal number of days to a 13 month calendar of 28 days each. Following upon a strong recommendation by the League of Nations, national committees have been set up by some 21 countries to study the question and educate public opinion upon it. It may be noted that no country has been more active in promoting the scheme than the United States. In these circumstances your Committee has seen fit to recommend that the Dominion Government should be advised of the desire of the Association to co-operate, in the event of a national committee for Canada being set up.

Old Age Pensions

"The only question which has arisen in the past year in connection with the old age pension legislation which is now in force in six of the provinces, is that of the relation between private industrial pensions and the Government pensions. As the legislation is now being administered, the Government pension is reduced by the amount of the industrial pension, with the result that most industrial pensioners become ineligible for any part of the Government pension of $20 a month (maximum). In view of the fact that this is discriminatory as between employers who have industrial pension schemes and those who have not (both of whom contribute equally to taxation out of which the Government pensions are paid), and in view of the fact that the result will be to discourage the industrial pension movement which ought rather to be encouraged, your Committee brought the matter to the attention of the Dominion Government urging that industrial pensions should not be regarded as "income" for Old Age Pensions Act purposes. The Government's reply was that the matter would have to be considered by a Dominion-Provincial Old Age Pensions Conference which is to be held in the near future.

Fair Wages and Eight Hour Day Act

"A Fair Wages and Eight Hour Day Bill was introduced by the Minister of Labour on April 1, providing for an eight hour day and the payment of fair and reasonable wages on all Government building contracts, the right to decide what are fair and reasonable wages to be vested in the Governor-in-Council. This, of course, marked a change from the present regulation whereby the prevailing rates of wages in the district in question are assumed to be fair and reasonable and accepted as the standard for the Government work.

"Another objection to the bill was that as drafted it appeared to apply to persons employed in the manufacture of building supplies.

"In these circumstances your Committee collaborated with the Association of Building and Contracting Industries in opposing the bill; and a result of representations made by a strong deputation which waited upon the Government, the bill was amended so as to apply only to future contracts and not to contracts already in existence, and also so as to cover only persons employed in actual construction work and not persons employed in the manufacture of building supplies in any established plant or factory.

Minimum Wage Legislation

"Manitoba is the only province in which any change has been sought in minimum wage legislation during the past year. The amendment proposed was to make the Act applicable to boys under 18. This was opposed by our Manitoba members on the same grounds on which a similar proposal was opposed some years ago in Ontario, viz., that such legislation was not needed in the interests of boys and that it would in practice work out to their detriment by putting a premium on employment in "blind alley" jobs instead of inducing them to treat their first years of employment as an apprenticeship. The views of the employers were accepted and the legislation was not proceeded with.

Unemployment Insurance

"Your Committee has been giving considerable attention to the question of unemployment and to the various methods which have been suggested for dealing with it, including unemployment insurance. Your Committee still adheres to the view expressed in the resolution passed at the 1928 Annual Meeting, viz., that it would not be wise to introduce unemployment insurance in Canada. Your Committee feels that such unemployment as exists in Canada is largely seasonal and occurs in such occupations as agriculture, building and construction, lumbering, fishing, shipping and road making, rather than in manufacturing,—a view which is confirmed by the Government statistics of employment over a period of years. In these circumstances your Committee feels that a general unemployment insurance scheme, which would presumably be applied in the main to manufacturing would not solve the unemployment problem as it exists in Canada.

"Your Committee further feels that unemployment insurance is at best a mere palliative, and a palliative that may actually aggravate the evil which it is expected to cure. The real cure is, of course, to provide more jobs, or failing this, at least to spread out the existing amount of work more evenly over the year and so eliminate the seasonal and other fluctuations which account for so large a part of the unemployment. Your Committee notes with satisfaction that more and more attention is being given to this problem by industrial and other employers, and makes bold to suggest that their example might well be followed to a much greater extent than at present, by the various Governments, in the carrying out of their building programs.

"One of the most serious counts against unemployment insurance is that when it has once been adopted, other and sounder methods of dealing with the problem tend to be lost sight of. In other words because a palliative has been secured, no attempt is made to find a cure.

"Another and still more vital objection to unemployment insurance is that inevitably, as experience in England and other countries shows, the principle of insurance is lost sight of, and under political exigencies the schemes degenerate into the mere distribution of public moneys among the unemployed regardless of whether they have contributed or not.

"Your Committee proposes to continue its study of this question with a view to exploring the various methods of cure, and recommends that in the meantime the Association should remain on record as opposed to any such unproved and even dangerous palliative as unemployment insurance."

The United States Employees' Compensation Commission recently published a revised series of Regulations concerning the duties of employees, official superiors, medical officers and others under the federal Compensation Act of 1916. The injuries for which compensation is paid under this act now include diseases approximately caused by the conditions of employment. Reasonable medical, surgical and hospital services and supplies, with transportation to the place where these are secured, are furnished in all approved cases. The money benefits paid in cases of total disability are 66⅔ per cent of the monthly pay (including value of subsistence and quarters, if furnished) during continuance of such disability, beginning on the fourth day of disability, and if disability is partial, 66⅔ per cent of the loss in wage-earning capacity due to the disability, but in no case to exceed the maximum compensation. The widow, or the wholly dependent widower of a deceased employee receives 35 per cent of monthly pay of deceased employee until death or remarriage; and, in addition, for each child under 18, 10 per cent of monthly pay until death, marriage, or reaching the age of 18.

According to figures issued by U.S. Bureau of Mines, 212 mine employees were accidentally killed during the month of January. Of this number, 164 deaths occurred in the bituminous fields and 48 in the anthracite fields. The fatality rate was 3·29 for each 1,000,000 tons mined while the anthracite rate was 6·82 per 1,000,000 tons produced. The record is not so good as that of January a year ago, when there were fewer deaths and a greater production.

AMALGAMATED CLOTHING WORKERS OF AMERICA

Proceedings at 9th Biennial Convention, Toronto, May, 1930

THE ninth biennial convention of the Amalgamated Clothing Workers of America was held in Toronto on May 10-17, with 233 delegates present, representing 13 joint boards and 105 local unions. The opening session was held in Massey Hall, and was attended by the entire local membership of the organization, while subsequent sessions were held in the convention hall of the Royal York Hotel anad were presided over by General President S. Hillman. Addresses of welcome were delivered by W. S. Greig, chairman of the convention arrangement committee of the Toronto joint board; L. Marcovitz, manager of the Toronto organization, and Charles Tovey, manager of the organization in Hamilton. Controller James Simpson welcomed the delegates in the name of the City of Toronto, while Mr. J. S. Woodsworth, M.P., extended a welcome on behalf of the political labour movement of Canada.

After replying to the address of welcome, President Hillman reviewed the progress that had been made by the organization since the previous convention, especially in Canada. The president referred to a clause which had been inserted in their agreements as early as 1911, providing for equal division of work among all workers during times of depression. This clause was intended to prevent workers from being discharged and thrown out to increase the number of unemployed. As a justification of this policy of the organization, President Hillman referred to the conference of industrialists called by President Hoover in 1929, when the President urged employers not to increase the number of unemployed by laying off more workpeople. He claimed that in this machine age it was absolutely essential to shorten the working day in order to give employment to the working population. As a further relief for unemployment President Hillman urged the extension of unemployment insurance.

Secretary-treasurer Joseph Schlossberg stated that there were three vital principles, which if carried to their logical conclusion, would give the workers a large measure of economic security and industrial democracy. These principles were: (1) Collective bargaining; (2) Reduction of the number of working hours per week; and (3) Compensation to the workers when the industry is unable to employ them. Continuing his address, the secretary-treasurer gave a detailed report of conditions in the industry throughout the country.

Resolutions adopted by the convention contained the following decisions:—

That the general executive board continue its activities in co-operative housing;

Extension of Amalgamated banks to various cities;

Recreational and athletic activities for the members;

Publication by the national office of pamphlets for distribution among the members of the organization and the labour movement as a whole;

Establishment of a life insurance department;

Establishment of an Amalgamated old age pension system;

Protesting against alien registration legislation in the United States;

Authorizing the general executive board to submit to a referendum vote a proposition to increase the per capita tax at such time and to such amount as the general executive board may deem proper;

Instructing the general executive board to continue its effort to introduce the 40-hour week in the clothing industry;

Protesting against the incarceration of Mooney and Billings;

Thanking United States Senator Robert M. LaFollette, Jr., for his invaluable service in securing to American labour the right to organize;

Extension of unemployment insurance to all the organized clothing manufacturing markets in the country;

Calling for organization activities among clothing workers in the Province of Quebec.

Some of the resolutions referred to the general executive board, after receiving the endorsation of the convention, were as follows:

Instructing the general executive board to do its utmost towards the launching of a political party of the workers;

Suggesting the establishment of *Il Lavore* (Italian organ of the organization) on a weekly basis;

Recommending the establishment of an institution for aged members;

Urging the unionization of the shipping clerks, stock clerks, and ticket sewers;

Asking that wages in Hamilton be made to conform with those in Toronto.

In the nominations for general officers, President Hillman and Secretary-treasurer Schlossberg were unanimously nominated to continue in office. The present general executive board members were renominated, as were also some additional fifty delegates, the election to be held subsequently.

Rochester, N.Y. was chosen as the convention city for 1932.

UNEMPLOYMENT INSURANCE IN MEN'S CLOTHING INDUSTRY IN UNITED STATES

REFERENCES to the unemployment insurance scheme for the benefit of the employees in the men's clothing industry in various manufacturing centres in the United States have appeared from time to time in the LABOUR GAZETTE (December, 1929, page 1351; August, 1928, page 819; July, 1923, page 705, etc.). An account of the system from the date of its commencement to the present date is given in the May issue of the *Monthly Labor Review*, published by the United States Department of Labour, as follows:—

Since early in 1923 a system of unemployment insurance has been in effect in the men's clothing industry in Chicago. In 1928 similar systems were inaugurated in the Rochester (N.Y.) and New York City markets. The union, the Amalgamated Clothing Workers, whose members are the beneficiaries under these systems, states that more than 50,000 employees are covered by the unemployment insurance in these three cities.

Chicago.—Under the original plan in Chicago the employers contributed 1½ per cent of the weekly pay roll and the employees contributed at the same rate on their wages. The 1928 agreement, however, doubled the rate of the employers' contribution, that of the employees remaining the same as before. This agreement remains in effect until May 1, 1931, unless changed by mutual action before that time. The benefits are paid at the expiration of each 6-month period, May to October and November to April, and are based on the unemployment experienced during that time, up to a maximum of 110 hours. The rate is 30 per cent of $50 per week, so that the highest amount paid is $37.50. If the funds do not permit the payment of the full benefits the amounts may be proportionately reduced. From 20,000 to 25,000 workers benefit each six months.

From May 1, 1923, when the first benefits were paid, until December 15, 1928, the amount disbursed in benefits totalled $4,025,336.09. In May, 1929, some $370,000 was paid in benefits, and in November of the same year, $466,853.89. Thus, altogether, about $4,860,000 has been disbursed in this city and about $500,000 more will be distributed this spring.

New York.—In the New York Market the whole cost is borne by the employers, who contribute weekly 1½ per cent of the total cost of the labour employed both in their own shops and in those doing contract work for them. Contributions began September 1, 1928. Although the fund had not yet reached the stage at which regular payments of benefits could be begun, employment conditions were such in the spring of 1929 that the trustees, at the request of the union, appropriated $25,000 for relief among the needy, unemployed members. An additional $10,000 was later set aside for the same purpose. The maximum amount paid to any individual was $20. In this way many unemployed were assisted. In November, 1929, the trustees of the fund again found that some relief was necessary and therefore set aside $100,000 for unemployment relief. Similar action was taken again in the spring of 1930. It is stated in the *Advance* that altogether the sums so appropriated between April 11, 1929, and March 6, 1930, amounted to $305,000.

Rochester.—Under the Rochester agreement employers and employees contribute at the same rate—1½ per cent—but the employers' contributions began May 1, 1928, while those of the workers did not begin until a year later. Shortly after the first relief payments were made in New York City similar action was taken in Rochester. In that city each needy member recommended for relief received $10. Payments of similar amounts were made in succeeding weeks until the $15,000 appropriated for the purpose was exhausted.

It should be emphasized that these expenditures were emergency measures only. Neither the Rochester nor the New York City fund has yet begun the payment of regular benefits, but the *Advance* of March 28, 1930, stated that regular payments would begin in Rochester on May 1 of this year and that about $100,000 would be disbursed.

Coming Trade Union Conventions

The following labour organizations will hold conventions in July at the places and on the dates mentioned:

International Brotherhood of Bookbinders, Toronto, Ont., July 7.

International Brotherhood of Firemen and Oilers, Montreal, Que., July 14.

Sheet Metal Workers' International Association, Toronto, Ont., July 14.

Canadian Carpet Weavers' Beneficial Association, Toronto, Ont., July 19.

International Plate Printers, Die Stampers and Engravers' Union of North America, Boston, Mass., July 21.

International Stereotypers' and Electrotypers' Union, Indianapolis, Ind., July 21.

LABOUR EDUCATIONAL ASSOCIATION OF ONTARIO

Summary of Proceedings of the 28th Annual Convention

THE 28th annual convention of the Labour Educational Association of Ontario was held in Niagara Falls on May 24. The convention was marked by the retirement of W. Joseph T. Marks from the secretary-treasurership, a position he had held since the formation of the body in 1903. By a unanimous decision he was retained as honourary president, with a suitable honorarium for life. The delegates were welcomed to Niagara Falls by Mayor F. C. Swayzie, while Mr. Frank Healy, general organizer of the International Union of Operating Engineers, tendered the welcome of organized labour of the city. Others who spoke at the opening session were Mr. P. M. Draper, secretary-treasurer of the Trades and Labour Congress of Canada, and Alderman Rod. Plant of Ottawa, president of the Labour Educational Association, the latter replying to the addresses of welcome.

The report of the executive officers directed attention to the "serious situation with which the wage-earners of the province are faced at the present time through the general 'speeding up' of industry." It was pointed out that Ontario being a large industrial province, with over nine thousand manufacturing plants, its mining, building and construction activities, was largely affected by present day industrial methods. In addition, the tendency to refuse employment to workers of forty-five to fifty years of age was adding to the already perplexing problem of stabilizing employment.

The executive urged that all affiliated organizations continue to press for establishment of state unemployment insurance. The report showed that officers of the association had been active throughout the year in furthering the cause of the trade union movement, having participated in several delegations before public bodies when labour's claims were submitted. Protest had also been registered on behalf of the association against enactment of legislation providing for the reintroduction of election deposits by candidates in provincial elections, while members of the federal government had been asked to adopt the draft fair wages bill submitted by the Trades and Labour Congress of Canada.*

Satisfaction was expressed at the number of active trade unionists elected to municipal councils in various sections of the province during the past year, it being pointed out that much legislation more directly affecting the home life of wage-earners came within the jurisdiction of municipal government.

The financial statement showed the association to be in a flourishing condition. Some twenty new affiliations were reported.

Among the resolutions adopted was one disapproving of criticism by certain Canadian publications of the action of the Federal Immigration and Labour Departments for detaining a number of Australian workers who were being imported into Canada for employment in a new industry. The resolution also urged continued application of the provisions of Order in Council No. 1413 prohibiting entry of contract labour into the Dominion unless the required labour is not available in the country.

The delegates approved of proposed amendments to the Criminal Code making it a criminal offence, punishable by imprisonment, for parents or others in charge of children to leave them unprotected in any house or building.

A resolution asking that a provincial federation of labour be established in Ontario was referred to the executive, with instructions to confer with the executive officers of the Trades and Labour Congress of Canada and report at the next convention of the association.

Other resolutions adopted recommending as follows:—That the Ontario Legislature pass enabling legislation making the Federal Industrial Disputes Investigation Act applicable in that province;

Asking the International Union of the United Brewery, Flour, Cereal and Soft Drink Workers to register its union label in Canada;

An increase in court witness fees to at least an amount equal to jurymen's fees;

Establishment of properly organized health units in rural communities, and Federal and Provincial assistance for this purpose;

That all affiliated bodies press for the enactment of adequate building and fair wage by-laws in their respective municipalities;

Asking the directors of McMaster University to establish a summer school for girls and women in industry;

Stricter regulations governing homes and other institutions caring for immigrant children;

Condemning cadet training in the schools of Ontario and recommending a system of physical training instead;

* This Draft Bill was found to contain provisions that would have been *ultra vires* of the Dominion Parliament, and the government instead brought in the legislation which was outlined in the LABOUR GAZETTE, April, 1930, page 383.

Legislation to provide that hours of duty of drivers of motor transport vehicles be restricted to not more than eight in any one day;

That the Minimum Wage Act be amended to bring male minors within its scope;

That the Federal Government "overcome the impasse with respect to increase in salaries of letter carriers."

Another resolution requested the withdrawal of legislation enacted at the last session of the Ontario Legislature providing for cash deposits by candidates in provincial elections. It was stated that although this legislation had been adopted, the Prime Minister, at the request of organized labour, had agreed to withhold obtaining Royal Assent for the measure in order to ascertain whether it met with public approval. The resolution was adopted, with instructions to the secretary to communicate with all trades and labour councils in the province urging them to seek the withdrawal of the legislation.

The election of officers resulted as follows: President, E. W. A. O'Dell, Hamilton; vice-president, Larry O'Connell, Toronto; secretary-treasurer, Ald. Rod. Plant, Ottawa; executive board, F. Ackerknecht, Kitchener; Wm. Parsons, St. Thomas; R. Foxcroft, London; A. Donald Dear, Ottawa; F. Maxted, Hamilton; J. W. Snowball, Toronto; A. Medley, Guelph; Chas. Bailey, Mimico; B. S. McSween, Niagara Falls; Peter Grant, St. Catharines; W. Caplen, Thorold.

The Association decided to meet in Guelph in 1931.

CO-OPERATIVE MANAGEMENT IN A NEW ENGLAND TEXTILE MILL

"HERE is *prima facie* evidence that a cotton mill can be in the North, can pay relatively high wages, can work decent hours, can deal with organized labour, and still can not only survive but prosper in the midst of a long-continued and general depression in its industry."

In the foregoing sentence the *New Republic,* January 1, 1930, commented upon three addresses before the Taylor Society at New York last December, delivered respectively by J. Foster Smith, agent of the company in question; John P. O'Connell, secretary and business manager of the union concerned (the United Textile Workers of America, Salem, Massachusetts); and Francis Goodell, an industrial engineer engaged to help in solving the problems confronting the industry. These addresses were reprinted in the *Bulletin* of the Taylor Society, April, 1930. The mill referred to is the Naumkeag Steam Cotton Company of Salem, manufacturers of Pequot sheets and pillow cases. This concern was founded in 1839, and since that time the company's relations with its employees had been generally friendly in character. Mr. J. Foster Smith, after a survey of the early history of the mill, went on to describe the recent development as follows:—

"As is bound to happen in all human relations, so at the Naumkeag in the first seventy-five years there had been a few inevitable differences of one sort or another. None of them was of any particular moment resulting in material losses in production and wages to the two parties at odds. It was not until the fall of 1919 that a real walk-out occurred—just eighty years after the establishment of the company. This strike, precipitated by a demand for an increase in wages which the management could not then grant, lasted several weeks, and was marked by a total absence of discord or disturbance. It was amicably settled to the satisfaction of all concerned after a number of conferences between the management and the representatives of the Union. With the resumption of work began a closer co-operation between employer and employee, and a united effort for quantity and quality production. Added to this was a sincere effort on both sides to eliminate, or at least alleviate, the causes of friction, misunderstanding, resentment, which are bound to occur in an industry employing two thousand five hundred hands, and obviously out of the individual control of the general manager. A punctilious regard for seniority rights was exercised, which helped the morale tremendously.

"A further extension of the co-operative spirit came about when the management and the Union, through their legally qualified officers, signed an agreement, the main object of which is the removal, as far as possible, of all causes for misunderstanding and friction, and the promotion to the greatest possible degree of a mutual helpfulness between the two organizations.

"The agreement recognizes the desirability of the trade unions, the spirit of co-operation in promoting the continued and successful operation of the mills; pledges the co-operation of employees in effecting such economies in manufacturing as may be brought about by the introduction of improved machinery; provides for a proper and orderly holding of conferences in the event of differences which may arise in the natural course of the operations

of the mill and bleachery, and further provides for regular meetings between the management and the representatives of the Union —an eminently fair agreement which has worked out excellently."

In the concluding portion of his address Mr. Smith anticipated that the effects of the new employee co-operation plan in industry would be far-reaching. "In the old days," he said, "employer and employee each regarded the other as a natural and inevitable enemy. Happily this condition is now in a fair way toward the discard. We are on the threshold of a new era. There are more steps to climb before easy going is reached, but it is with a most sanguine feeling of the ultimate success of our employer-worker co-operative effort that we present this picture of our progress to date."

Mr. J. P. O'Connell, the Union secretary, described the origin and development of the movement as follows:—

"In June, 1918, a strike occurred within the Naumkeag spinning and carding department, employing three hundred workers. A local union was organized and chartered in the United Textile Workers of America, and the machinery for dealing with the management established. Agreement was reached at the end of five days to return to work and submit the entire controversy to arbitration under the auspices of the Massachusetts State Board of Arbitration.

"In the fall of 1919, 75 per cent of all workers were members of the Union, and demanded its recognition with collective bargaining in its fullest sense plus a general increase in wages. After a seven weeks' strike, a conference was called, and the management and the Union officials agreed upon: (1) recognition of the Union; (2) a minimum wage for women; (3) collective bargaining; (4) withdrawal of the wage increase; (5) a system of dues collection within the mill, and (6) the establishment of a shop committee and foreman conferences to adjust grievances. A remarkable thing about these two early struggles was the spirit manifested by both sides. Neither side is to-day ashamed or embarrassed by any act of its membership.

"Mr. J. Foster Smith on both occasions closed the plant and never resorted to injunctions, yellow-dog contracts, or other methods used to destroy the effectiveness of the Union. The Union membership likewise took a responsible attitude toward such management problems as the creating of standards of wages and working conditions, consultation on discharges, adjustment of grievances between foremen and shop committees. This was considered reasonable because it was believed that such an attitude would assist in improving morale and in stimulating a real everyday interest in jobs. And it did.

"Next followed an agreement to accept seniority rule as a means of still further improving morale. It is believed that honest effort in quality and quantity production is rendering faithful service, and is entitled to reward in the form of promotion as well as in security of job.

"The next co-operative step was reduced to writing in the form of an open covenant. We believe the agreement between the United Textile Workers of America and the Naumkeag Steam Cotton Company to be an embodiment of the striving toward industrial progress."

A full account of the new co-operative arrangement from the technician's point of view, was given by Mr. Francis Goodell, industrial engineer, who considered that certain features of the agreement above described are "perhaps unprecedented developments in industrial history."

A five-day week has gone into effect in the plumbing and steam fitting trades at Victoria, B.C. In future plumbers will have the whole of Saturday and Sunday off, while the rate of pay will remain at the former scale of $1.12 per hour. Some time ago, the plumbing trade at Victoria made a demand that a forty-hour week be enforced, and that the scale of wages of $8.89 per day be raised to a flat rate of $10 per day. The agreement to institute a forty-hour week has just been completed, granting an additional four hours of free time to the plumbing trade, but the scale of pay remains unchanged. The *Contract Record* states that non-union plumbers are not in agreement with the plumbers' union in the demand for a 40-hour week and a $10 rate, and in order to allow union men to compete with these non-union plumbers, the union has made concession allowing its men to do jobbing work on Saturdays at the regular rate of pay.

About 8 miles of cement sidewalks were laid last year in Vancouver by day labour, the cost of the work having been about one cent and a half less than by contract labour. This year, it is stated, about one-third of such work in the city is being done directly by the Engineering Department, this being all that the department can carry out with its present equipment.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

AN account of the second annual convention of the Province of Quebec Safety League, held at Montreal early this month, will be given in the next issue of the LABOUR GAZETTE.

Shorter Hours for Motor-Truck Drivers

The Hon. George S. Henry, Minister of Highways of Ontario, informed the Motor Truck Owners' Association at their annual convention at Toronto in May that he was considering the advisability of framing legislation to limit the number of hours of work of motor truck drivers. "Many serious highway accidents," he said, "are due to truck drivers having had insufficient rest. In the interests of public safety, truck owners should see to it their drivers are not forced to work an unreasonable number of hours in the twenty-four. I have had several conferences with Attorney-General W. H. Price about this matter, and it has been decided that some legislation along this line will be needed if accidents arising from this cause occur as frequently in the future as they have in the past."

"Safest Mill" Competition in Pulp and Paper Industry

In previous issues of the LABOUR GAZETTE references have been made to the safety competition conducted under the auspices of the *Pulp and Paper Magazine*. This contest is held semi-annually, and is for the purpose of ascertaining the "safest mill in Canada" in the pulp and paper industry. The competition is divided into two classes—Class A for the larger, and Class B for the smaller plants. The results of the contest for the period from July 1 to December 31, 1929, were announced in the May 8 issue of the *Pulp and Paper Magazine*, the winner of the safety trophy in Class A group being the Canada Power and Paper Corporation at Grand'Mère, Quebec. During the duration of the contest, this company had only 5 non-fatal accidents, involving a total time loss of 19 days. In the second place was the Canadian International Paper Company at Hawkesbury, Ontario, with 8 non-fatal accidents, involving a time loss of 74 days; while the British Columbia Pulp and Paper Company at Port Alice, B.C., was third, with 11 non-fatal accidents and a time loss of 185½ days.

In Class B, the Provincial Paper Mills, Limited, Mille Roches, Ontario, won first place with 2 non-fatal accidents, involving a loss of 26½ days. Price Brothers & Company, Limited, Jonquière, Quebec, came second with 3 non-fatal accidents and 24 days lost time, and Provincial Paper Limited, Thorold, Ontario, with 4 non-fatal accidents and 52 days lost time, took third place.

Coal-Dust Explosions in Mines

Dr. George S. Rice, chief mining inspector of the United States Bureau of Mines, describes the causes and effects of coal-dust explosions in mines, and makes recommendations for their prevention, in a pamphlet published recently by the Department of Commerce at Washington, from which the following information is taken.

There is practically no bituminous coal mine that does not make enough coal dust to produce a dust cloud of sufficient density to ignite and to propagate an explosion if the coal dust is not neutralized by inert matter or so wet as to be mud.

Anthracite dust with less than 10 per cent of total combustible is not found to be explosive in air, even though small percentages of methane are present. The dust of bituminous coals in non-rock-dusted mines is always explosive, the differences of degree depending upon the freedom of the coal from moisture and ash, and upon natural inclusions. The dust of sub-bituminous coals, those formerly called black lignite, is explosive when fine and dry, but where, as is usually the case in sub-bituminous mines, the coal contains a large amount of moisture and is coarse, it is less easily ignited in air. The dust of lignite or brown coal is seldom found in condition to propagate an explosion in mines, as the moisture content—50 to 60 per cent in the mine—is usually far too high to form a dust cloud; but when the coal dust is artificially dried, as for briquetting or powdered fuel, it is highly explosive in air.

A coal-dust explosion is a very rapid inflammation and in the open air usually does no harm, although even in the open air there have been accidents where men have not got away quickly enough to escape the flame passing through a cloud of coal dust. When the coal dust is confined, as in small chambers or conduits or in the passages of mines, the heated gases cannot escape, pressure is built up, and the inflammation becomes an explosion. There is no exact boundary between an inflammation of coal dust in air and a coal-dust explosion. To start an explosion,

a dust cloud must have been raised by blasting with explosives, by the ignition of a body of fire damp, or perhaps by the wreckage of a trip of loaded mine cars.

Precautions.—Dr. Rice discusses fully the physical, chemical and mechanical factors and the phenomena to be observed in coal dust explosions, and gives a summary of past investigations of explosion disasters. He concludes by enumerating the precautions that should be taken to prevent explosions, as follows:—

1. Thoroughly ventilate every part of the mine. Use enough splits of the air current, divided near the intake shaft if possible, to avoid working places being on the return air.

2. In any mine, gassy or slightly gassy, control the ventilation by sampling and analyzing the return of each split daily; moreover, see that the inspectors use safety lamps, Burrell gas indicators, or other permissible equivalent.

3. Seal all abandoned working places with strong fireproof stoppings; also seal those that may not be worked for a long time and cannot be thoroughly ventilated and inspected. This latter recommendation of the Bureau of Mines, presented as a formal decision of policy, is a very important part of any program of mine safety.

4. Use electric trolleys and bare power lines or imperfectly insulated electric conductors in gassy mines or slightly gassy mines in pure intake air only, and never in the return air.

5. Employ thorough rock dusting in all bituminous and sub-bituminous mines. Rock dust should be distributed in every entry, air course, and room. In rooms that have been stopped the rock dusting should extend to the face and over the gob. In active workings rock dustings should extend at least to within 40 feet of the face. It is desirable that the miners in every working place be supplied with a pile of rock dust so that they may distribute it from time to time as the face advances, in addition to the rock dust that may be scattered periodically by rock-dusting machines or rock-dust crews.

6. Rock dust any place where the samples gathered regularly show that the incombustible content of the dust from the rib or floor (including ash of the coal, natural and artificial rock dusting, and moisture) falls below 55 per cent, so that an average of at least 65 per cent may be maintained throughout the mine. This recommendation is urgently made by the Bureau of Mines.

A report by Dr. Rice on two coal mine disasters in Alberta in 1926, due to explosions of coal dust, was outlined in the LABOUR GAZETTE, March, 1927, page 281; and a report by the same authority on the occurrence of "bumps" in the Springhill Mines, undertaken at the request of the Government of Nova Scotia, was outlined in the issue of February, 1925, page 161.

"Accident Facts" in United States

The National Safety Council (United States) has published in its Public Safety Series a pamphlet entitled "Accident Facts, 1929." The statistics presented relate principally to 1928 and previous years. It is stated that accidents of all kinds took the lives of approximately 96,000 persons in 1928, according to the most complete records now available. This represents an increase of 3·1 per cent over 1927, when 93,078 persons met accidental death, and also an increase over 1927 in the death rate per 100,000 population. The 1927 rate itself was the first in seven years to show a decline. In that year the rate for the United States was 78·4, as compared with 78·7 in 1926. The last previous year in which a decline occurred was 1921. Since then there had been a steady increase except in 1924, when the rate was exactly the same as in 1923.

The death rate per 100,000 population, from all accidents, decreased from 85·5 in 1913 to 68·7 in 1921, but since 1921 an increase to 78·4 has occurred. The decrease from 1913 to 1921 was 20 per cent; the increase from 1921 to 1927 was 14 per cent. Automobile accidents only, experienced an increase in death rate from 1913 to 1921 of 195 per cent, and also an increase of 71 per cent from 1921 to 1927.

Industrial Accidents.—The pamphlet contains information as to accidents by causes, age, sex, principal types, severity, etc. The last section treats of industrial accidents. Estimates of the number of industrial fatalities in 1928 range from 20,000 to 25,000. In the absence of exact information 24,000 such deaths are estimated to have occurred in the United States during 1928. While information on non-fatal injuries is even less complete than that for fatalities, it is generally agreed that there are not less than 130 non-fatal "lost time" injuries for each industrial fatality, so that the total number of non-fatal injuries probably reaches about three and one-quarter million per year.

The cost of industrial accidents has been the subject of extensive investigation by the United States Bureau of Labor Statistics. Using the Bureau's study as a basis it is estimated that the cost of industrial accidents in 1928 was $1,000,000,000.

"There is a wide difference between the low and the high rates, both for frequency and severity. In 1928, for example, establishments reporting from the cement industry had a combined frequency rate of 7·47, contrasted with a frequency rate of 67·78 in the mining industry. The severity rates show wide differences also, from ·66 for textile firms to 10·67 for the mining industry. While there is some variation in ranking of the various industries over a series of years, the positions held by particular sections from one year to another are stable enough to emphasize the differences in inherent hazards that really distinguish one industry from another."

Regulations for Use of Electricity in Mines in Quebec

An Order in Council of the Province of Quebec, approved on May 10, gave effect to new regulations governing the use of electricity in mines and quarries in the province. The regulations, which were adopted on the recommendation of the Minister of Mines of Quebec, are for the purpose of insuring the sanitary condition and safety of works in mines, so as to protect the life and health of the workers. The regulations contain general rules, as well as rules governing grounding, working space about electrical equipment, guarding live parts, storage batteries, transformers, conductors, fuses, cutouts and switches, motor control devices, lighting of primary stations, fire fighting appliances, lighting fixtures, trolleys and portable apparatus, cranes and elevators, telephones, transmission lines and the use of electricity in underground operations.

Skin Diseases due to Industry

An article on Dermatosis is contributed to the May issue of the *Industrial Health Bulletin,* published by the New York State Department of Labour, by Robert S. McBirney, M.D., medical inspector of factories. "Dermatology," he states, "is another interesting subject which has joined the march of industrial hazards to a new position in the realm of unknown peaks which must be confronted and conquered by the students of industrial safety."

The information obtained from what records are available shows that dermatitis (inflammation of the skin), takes the lead as a popular diagnosis. Following this comes eczema. The term eczema originally denoted skin diseases in shopkeepers, masons, washerwomen, cooks and other domestics. The origin of the so-called eczemas is either from without the body, or from within. Those from "without" are becoming more numerous because better known; they are entirely occupational, and are wholly dependent upon outside, obvious and well known substances. Such a group is entitled to a special differentiation.

The importance of dermatosis in the list of industrial hazards is shown by the following figures. Of 247 cases of occupational disease that were compensated in Massachusetts in 1927, 89 were due to dermatosis. In Ohio, in 1928, 894 out of 1,118 cases of industrial diseases, were cases of dermatosis. In New Jersey in the same year, there were 70 cases out of 232.

The annual report of the Chief Medical Inspector of Factories for England and Wales for the year 1928 shows that there were reported 662 cases of dermatitis, while during the same period of time 1,029 persons actually received compensation for this disease. This figure is conceded to be far below the actual number of dermatosis throughout the country. The causative agents of the disease are enumerated in the English report as follows:—alkalies; oil; dyes; acids; sugar; French polish; kerosine; turpentine and substitutes; dough; accelerators; gasoline and naphtha; wood dusts; methylated spirits; nickel compounds. Industries in which these diseases were contracted were:—engineering; chemical works; dye and calico printing; French polishing and staining; rubber works; labouring; plating; metal works; baking confectionery; painting; cotton trade; sugar confectionery; wood work; biscuit making.

The LABOUR GAZETTE correspondent at Nelson, B.C., reported a somewhat serious condition of unemployment as prevailing in the district during May. The situation was relieved to some extent, however, by the construction of a branch line of the Canadian Pacific Railway round Kootenay Lake, employing about 1,000 men. This work is expected to be completed in November. Other local work includes the building of a road at Rosebery, and the reconstruction of the Nelson power plant and lines. Renewed activity at the Trail smelter was expected, but had not begun during the month.

The Winnipeg School Board, at a meeting on June 11, gave notice that the contracts of employment of married women as teachers would terminate on December 31. The reason for this decision was stated as being that most of the married employees have other means of support. However, if any married woman can satisfy the Board that her services should be retained her case will receive individual attention. The Board also expressed its disapproval, in view of the prevalence of unemployment, of the practice of employees in accepting remunerative work during vacations.

ASSOCIATION OF GOVERNMENTAL OFFICIALS IN INDUSTRY OF THE UNITED STATES AND CANADA

Proceedings at Seventeenth Annual Convention

THE seventeenth annual convention of the Association of Governmental Officials in Industry of the United States and Canada was held in Louisville, Kentucky, May 20-23. The convention opened on May 20 with an informal dinner, tendered by the Kentucky Department of Labour. In the absence of Mr. Newton Bright, Commissioner of Agriculture, Labour and Statistics of Kentucky, owing to illness, Mr. E. F. Seiller, chief labour inspector of the State, presided. The address of welcome was delivered by Mayor Wm. B. Harrison of Louisville, which was replied to by Miss Maud Swett, of Wisconsin, president of the association. An address on "Some Lines of Attack Upon the Problems of Unemployment" was given by Mr. Paul Douglas, acting director, Swarthmore Unemployment Study, Swarthmore, Pennsylvania.

The roll call at the morning session on May 21, which was presided over by Miss Maud Swett, the president, showed nineteen state and one provincial departments represented as well as the Federal Departments of Labour of Canada and the United States, the delegates numbering 50. Following the address of the president the customary committees were appointed. The report of the secretary-treasurer showed a cash balance of $392.65. Reports were also given on new legislation from member states and provinces. A resolution was adopted in favour of the United States being represented on any committee which may be appointed to deal with the question of calendar reform.

The convention endorsed the principle of collection and publication of employment and payroll figures by industries, and declared (1) that in order to secure comparability of figures such collection and publication should be on the same general lines as those now collected by the United States Bureau of Labour Statistics and by a number of the leading industrial states, and (2) that in order to avoid duplication all states collecting such reports should co-operate with the United States Bureau on the same basis as now in effect between the federal bureau and the nine co-operating states.

The afternoon session on May 21 was given over to the question of uniformity in labour legislation, Gen. Le Roy Sweetser, Commissioner, Department of Labour of Massachusetts, presiding. Mr. Leifer Magnusson, United States representative of the International Labour Office, read a paper on "Some Problems and Methods of State Uniform Labour Legislation," followed by a paper prepared by Mr. Newton Bright, commissioner, Department of Agriculture, Labour and Statistics of Kentucky, on "Need for Uniformity in Labour-Industrial Relation Laws and Administration," but read by Mr. John W. Rogers, a member of the staff of the Kentucky department.

Dr. Eugene Patton, director of the Bureau of Statistics and Information, Department of Labour of the State of New York, presided at the morning session on May 22, the subject for discussion being "Factory Inspection, Safety and Sanitation," which included specific methods of factory inspection—(*a*) safe practices, (*b*) safety equipment, (*c*) safety regulations and (*d*) how to secure compliance. Two papers on the subject were contributed (1) By James L. Gernon, director of the Bureau of Inspection, Department of Labour of New York, and (2) By Thomas C. Devine, chief of the Division of Factory Inspection, Department of Industrial Relations of Ohio. The discussion on the papers was led by James Ballantyne, Deputy Minister of Labour for Ontario, followed by M. F. Nicholson, Tennessee; James Reagin, Indiana; Harry Immel, Pennsylvania; and Henry McColl, of Minnesota. At this session Dr. John B. Andrews, secretary, American Association for Labour Legislation, delivered an address on "Major Issues in Labour Law Enforcement."

At the afternoon session on May 22, at which Mr. W. A. Rooksberry, commissioner of the Bureau of Labour of Arkansas, presided, reports were presented by representatives of the Association of Governmental Officials in Industry serving on safety code committees. Dr. P. G. Agnew, secretary of American Standards Association of New York City, addressed the delegates on "State and National Aspects of the Safety Code Movement." Mr. Chas. Baldwin, assistant commissioner of the United States Bureau of Labour Statistics, presented a report as chairman of the committee of the association appointed to urge states to adopt American Standards Association standards. Following a general discussion, led by Mr. John Roach, assistant commissioner, Department of Labour of New Jersey, the report was adopted.

The presiding officer at the evening session on the same day was Miss Mary Anderson, director of the Women's Bureau, United States Department of Labour, at which the topic for consideration was "Administration of Labour Laws for Women and Children." An address was given by Miss Freida Miller, director of the Bureau of Women in Industry of New York, on "Reasons for Labour Laws Protecting Women and Children." Mr. Ed. F. Seiller, chief labour inspector of Kentucky, read a paper on "Problems Confronting an Inspector," following which a general discussion took place on certain phases of factory inspection legislation.

"Trends of Problems in Industry" was the topic for the concluding session, at which Mr. James H. H. Ballantyne, deputy minister of labour for Ontario, president. Mr. Frank J. Plant, chief, Labour Intelligence Branch, Department of Labour of Canada, gave a paper on "Methods of Adjusting Industrial Disputes in Canada" (The full text of the paper appears elsewhere in this issue). This was followed by an address by Mr. John T. Murphy, attorney-at-law, of Covington, Ky., in which the speaker outlined the advance of legislation in the United States designed to assist in the settlement of industrial disputes in that country. "Age and Employability" was the subject of an address by Mr. B. C. Seiple, commissioner of employment for the City of Cleveland, Ohio. At paper prepared by Mr. Russell J. Eldridge, director of the Bureau of Employment, Department of Labour of New Jersey, on "Labour Camps" was read by Dr. Chas. Blunt, commissioner of Labour of New Jersey.

Subsequently a business session was held, presided over by the president, at which the reports of committees were presented. It was decided to amend the constitution to provide for associate membership in the association.

The election of officers resulted as follows:

President, James H. H. Ballantyne, deputy minister, Department of Labour, Toronto, Ont.

First vice-president, W. A. Rooksberry, commissioner, Bureau of Labour and Statistics, Little Rock, Arkansas.

Second vice-president, General E. LeRoy Sweetser, commissioner, Department of Labour and Industries, Boston, Massachusetts.

Third vice-president, Dr. Eugene B. Patton, director, Bureau of Statistics and Information, Department of Labour, New York, N.Y.

Fourth vice-president, T. E. Whittaker, commissioner, Department of Commerce and Labour, Atlanta, Georgia.

Fifth vice-president, Miss Maud Swett, field director, Woman and Child Labour, Industrial Commission, Milwaukee, Wisconsin.

Secretary-treasurer, Miss Louise E. Schutz, superintendent, Division of Woman and Children, Industrial Commission, St. Paul, Minnesota.

Boston, Massachusetts, was chosen as the convention city for 1931.

Working Hours of Retail Clerks

The Retail Merchants' Association of Guelph, Ontario, at a meeting early in June, unanimously approved a proposal for a Saturday half-holiday for retail stores in Canada throughout the year. The Dominion and Provincial Retail Merchants' Organizations will be asked to make this recommendation to the governments concerned. A memorandum on the subject pointed out that industrial working hours, also legal and banking hours, have been shortened considerably, and while retail store hours have also been shortened, in recent years nothing of consequence has been accomplished along these lines.

"Retailers, a few years ago, established, in a hit or miss fashion, a half holiday for their staff during the summer months. Unfortunately this is not uniformly recognized among the many towns and cities, either as to the number of months or the day in the week. This voluntary system of closing, as at present in force, is a failure, because it causes confusion to the urban, rural and tourist shoppers. Such a holiday should be enforced over the whole of the Dominion on the same half day for the same period of months, and we feel that the only way this can be satisfactorily accomplished is by legislation. Retail store hours are unnecessarily long. We can give excellent service to the public, and more humane treatment to staff, with shorter hours. The trend of the times is in this direction. Retail stores have not kept pace in recent years. The time is ripe for action. It will give to these workers more sunshine and better health. It will improve working conditions and improve the retail business."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fourteenth Conference

THE Fourteenth Session of the International Labour Conference opened at Geneva on June 10, and is still in session as this issue goes to press. An account of the proceedings will be given in the July issue. The names of the Canadian delegates, and the agenda of the Conference were noted in the last issue (page 547). The main subjects under consideration were (*i*) Forced labour; (2) Hours of work of salaried employees; and (3) Hours of work in coal mines.

Annual Report of the Director

The annual report of the Director of the International Labour Office was issued shortly before the Fourteenth Conference. It is in two volumes; the first contains a review of the activities of the International Labour Organization in 1929; the second comprises a summary of the annual reports, presented under Article 408 of the Treaty of Versailles by Governments which have ratified Conventions, on the measures taken to give effect to the Conventions. The first part of this Report presents a complete picture of the life of the International Labour Organization during the tenth year of its existence. It shows the progress made in the consolidation of the Organization, both internally and externally; it describes how the Organization fulfilled its mission as an institution for the collection and distribution of information on labour matters; it presents a survey of the growth of ratification of Conventions adopted by the International Labour Conference; it gives a review of the changes in the economic situation during 1929; it outlines the developments which took place in connection with hours of work, industrial hygiene and safety, the protection of women and children, factory inspection, social insurance, wages, unemployment, living conditions, the right of association, conciliation and arbitration, and all the other problems which come within the ambit of the International Labour Office.

Hours of Work in Coal Mines

The Fourteenth Session of the International Labour Conference, as noted above, has before it for discussion the question of hours of work in coal mines, and a report on this subject by the International Labour Organization. Note was made in the LABOUR GAZETTE, November, 1929, (page 1251) of the action of the Assembly of the League of Nations in referring this question to the Organization. Considering that the serious depression in the coal industry called for urgent measures, the Assembly suggested that the Governing Body of the International Labour Office should convene at an early date a Preparatory Technical Conference to decide what questions relating to conditions of employment in coal mines might best be included in the agenda of the International Labour Conference of 1930, with a view to arriving at practical International agreement. This rapid procedure appeared possible in view of the fact that the International Labour Organization had been conducting enquiries for some years into the hours, wages and conditions of work in coal mines. The Preparatory Technical Conference was duly convened and met in Geneva from January 6 to 18, 1930, and recommended that the discussion of a Convention on hours of work in coal mines should be placed on the agenda of the 1930 Session of the Conference. At the same time, a number of definite provisions, on which agreement had been reached, were referred to the Governing Body. The Governing Body decided, at its February Session, to include the question in the agenda of the Fourteenth Session, leaving the Conference to decide whether a final decision may be reached at this Session.

The report which the Office has just published consist of two parts: an analysis of the deliberations of the Preparatory Technical Conference, and a survey of the considerations on which the Draft Convention appended to the report was based. The Draft Convention, which was prepared by the Office, provides that in all coal mines work shall be so organized that the time spent in the mine by any workers does not exceed 7½ hours in the day and 45 hours in the week. Provision is made, however, for a transitional period of three years during which the time spent in the mine may be 7¾ hours a day and 46½ hours a week.

The term "time spent in the mine" is defined as the period between the time when the worker enters the cage in order to descend and the time when he leaves the cage after reascending. Collective methods of calculating the time spent in the mine are recognized exceptionally, on the understanding that they shall be abandoned as soon as possible. Provision is made for the suspension of the Convention in certain circumstances. In accordance with a suggestion of the Preparatory Technical Conference, the Draft Convention provides that the annual reports to be sub-

mitted under Article 408 of the Treaty shall be examined each year by a special committee consisting of one Government representative, one employers' representative and one workers' representative of each country ratifying the Convention.

Forty-Eighth Session of the Governing Body

The Governing Body of the International Labour Office held its forty-eighth session at Paris from April 24, to 29, 1930. By invitation of the French Government, this meeting was held in the city in which the first European session was held some ten years ago. Naturally, the occasion was taken to assess the results of the first ten years' work of the International Labour Organization, and the speeches made successively by Mr. Pierre Laval, French Minister of Labour, by Miss Bondfield, British Minister of Labour, by Mr. Arthur Fontaine, Chairman of the Governing Body, by representatives of the employers', workers' and Government groups on the Governing Body, and finally by Mr. Albert Thomas, Director of the Office, left no room for doubt that during the past decade much has been accomplished, even if much still remains to be done.

During the course of the discussion of the Director's Report on the work of the Organization since the last Session, Miss Bondfield made a statement in which she referred to the time when the International Labour Organization was set up ten years ago, and announced on behalf of her Government that an Hours of Employment Bill had been laid before the House of Commons, and that if this Bill were passed it would enable Great Britain to ratify the Washington Hours Convention.

The principal decisions taken at this meeting may be summarized as follows:—

Non-ratification of Conventions.—The International Labour Office was authorized to send annually to the Governments of the States Members a brief report embodying the explanations sent to it by Government which have encountered difficulties in ratifying Conventions adopted by the International Labour Conference.

Revision of Conventions.—It was decided to adjourn the consideration on until next session of the decennial reports on eight Conventions which, by 1931, will have been in operation for ten years, and with respect to one of which—the Hours Convention—the Swedish Government had submitted proposals for revision.

Free City of Danzig.—The Governing Body decided, with the support of the representatives of Germany and Poland, to request the Council of the League of Nations to consult the Permanent Court of International Justice with regard to an application from the Free City of Danzig for admission to the International Labour Organization.

Maritime Questions.—The Governing Body considered the conditions under which the second discussion should be held of the maritime questions examined, on first discussion, by the Maritime Session of the International Labour Conference last October. While reserving full liberty of action in regard to future procedure for dealing with maritime questions, the Governing Body decided to authorize the Office to consult a preparatory technical maritime committee, representing Governments, shipowners and seamen, during 1931, on the questions already considered on first discussion. The Governing Body will decide later, in the light of the proceedings of this committee, whether those questions should be submitted to a General Session or to a special Maritime Session of the Conference.

Publications of the Office

A further series of brochures of "Occupation and Health", the Encylopaedia of Hygiene, Pathology and Social Welfare which is in course of publication by the International Labour Office, has just appeared.

The International Labour Office has just published a supplementary volume containing the American section of the "International Survey of Legal Decisions on Labour Law" for the year 1928. In this volume the description of the organization of the judiciary in the United States, which was given last year, has been retained and extended by a short survey of the powers of American Courts to declare labour laws unconstitutional and of the effects of anti-trust legislation on labour law. As in the previous year, noteworthy decisions will be found in the sections "Right of Association" and "Labour Disputes." Special interest attaches to a comparison between the decisions concerning compensation for industrial accidents under Workmen's Compensation Laws, which are given in the section "Social Insurance," and other decisions contained in the section "Individual Contracts" in which the claim far damages was based on Common Law or on the Federal Employers' Liability Act. This supplementary volume also contains the Index of the main volume.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN APRIL, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on May 1, was 7,208, their employees numbering 976,224 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,719, having an aggregate membership of 206,326 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning May, 1930, as Reported by the Employers

The Dominion Bureau of Statistics tabulated reports from 7,208 firms who reported a decidedly upward movement in employment on May 1; the payrolls of these employers were increased by 31,470 persons to 976,224 on the date under review, when the index, reflecting the gain of over three per cent, rose to 111·4, as compared with 107·8 on April 1, and with 116·2, 106·8, 101·8, 95·4, 91·9, 92·9, 92·5, 84·3 and 85·1 on May 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The situation, though not so favourable as in spring of last year, was nevertheless better than on May 1 in all earlier years of the record. The increase in the index number between April 1, and May 1, 1930, slightly exceeded the average gain shown in this period of the years since 1921.

Construction and transportation recorded pronounced improvement, while large gains were also noted in manufacturing, trade and services. On the other hand, there was seasonal curtailment in logging and coal mining.

Employment by Economic Areas

Heightened activity was reported in all provinces, but Ontario and the Prairie Provinces registered the largest increases.

Maritime Provinces—Additions to staffs were indicated in the Maritime Provinces, where 560 firms reported 76,062 employees, or 3,677 more than in their last return. This gain was much larger than that noted on May 1 last year, when the index was some five points lower. Construction showed the greatest advances on the date under review; manufacturing, especially in pulp and paper, lumber and fish-preserving plants also showed important gains, while transportation and mining were seasonally slacker.

Quebec.—Improvement was recorded in Quebec, according to 1,661 employers with 269,133 workers, as against 263,188 in the preceding month. Large increases were reported in transportation and construction and maintenance, and there were smaller gains in trade, communications and services. On the other hand, manufacturing, logging and mining were slacker. Employment was in rather less volume than on the corresponding date a year ago, when the indicated increase was considerably larger.

Ontario.—The expansion in Ontario on May 1, 1930, was not so pronounced as that reported on the same date in 1929, when the index was higher. The working forces of the 3,211 co-operating firms, aggregated 415,459 employees, compared with 404,548 on April 1. Construction and transportation registered the most marked increases, but the movement was also upward in manufacturing, mining, services and trade, while logging was seasonally slacker.

Prairie Provinces.—Manufacturing, transportation and construction showed heightened activity, the advance in the last-named being most marked. Statements were tabulated from 1,049 employers, whose staff arose

from 121,871 persons on April 1, to 129,009 on the date under review. This expansion was on a larger scale than at the beginning of May, 1929, but the index was then higher than on the date under review.

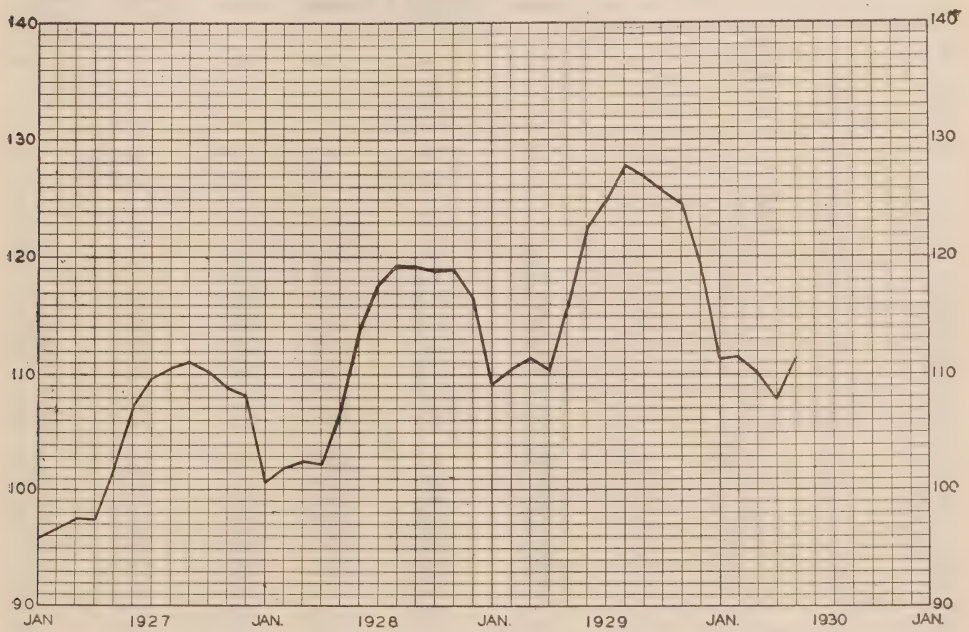
British Columbia.—The improvement in British Columbia was not quite so extensive as in spring last year, when the index was nearly a point higher. An aggregate payroll of 86,561 workers was indicated by the 727 firms furnishing data, who had 82,762 in the preceding month. Manufacturing and construction were decidedly busier, especially marked advances taking place in the latter; transportation and logging were also more active, while other industries showed only slight changes.

Table I gives index numbers by economic areas.

Employment by Cities

Montreal, Quebec, Toronto, Ottawa, Windsor and the Adjacent Border Cities, Winnipeg and Vancouver showed considerably increased activity, but there was a decline in Hamilton.

Montreal.—Transportation, construction and trade recorded the greatest advances in Montreal, where 900 employers added 2,063 workers to their payrolls, bringing them to 137,750 at the beginning of May. Greater increases were indicated on the same date last year, when the index stood at 114·2, as compared with 110·8 on May 1, 1930.



Quebec.—Statements were tabulated from 118 firms with 11,830 employees, as against 11,402 on April 1. Most of the improvement took place in construction and transportation. The gain involved more workers than that recorded on May 1, 1929, when the index was slightly higher.

Toronto.—Transportation, construction, services and trade reported important increases in personnel in Toronto, according to data furnished by 996 employers, whose payrolls aggregated 126,032 persons, as compared with 124,254 at the beginning of April. This expansion was not so pronounced as that indicated on May 1 last year, and the index then was some three points higher than on the date under review.

Ottawa.—Lumber mills, construction and trade registered the bulk of the improvement

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

in Ottawa, where the advance involved a smaller number of persons than that noted at the beginning of May, 1929. Statistics were tabulated from 150 firms employing 13,498 persons, compared with 12,524 on April 1. The index was at its spring-time maximum in the record for this city.

Hamilton.—A combined working force of 35,756 persons was reported by the 225 co-operating employers, who had 36,327 on April 1. Manufacturing was slacker, while transportation showed greater activity. Employment was in smaller volume than in the same month in 1929, when expansion was indicated.

Windsor and the Adjacent Border Cities.—Considerable improvement was shown in the Border Cities, chiefly in automobile factories and construction. Returns were tabulated from 137 firms with 18,555 workers, compared with 17,568 in the preceding month. Employment was not so brisk as in spring last year.

Winnipeg.—Construction and manufacturing reported expansion in Winnipeg, where the 344 co-operating employers added 690 persons to their staffs, bringing them to 31,743 on May 1. The situation was less favourable than at the same date last year, when somewhat larger gains had been indicated.

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100).

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921

Vancouver.—Manufacturing registered moderate increases in Vancouver, according to 280 firms who employed an aggregate working force of 29,771 persons, compared with 29,584 on April 1. The index was slightly higher than at the beginning of May a year ago, when the trend was also upward.

Index numbers by cities are given in Table II.

Manufacturing

Employment in manufactures showed an important gain at the beginning of May; 4,387 establishments reported 541,702 workers, compared with 536,320 in the preceding month. The largest advances were in lumber mills, where they were of a seasonal character, but noteworthy expansion also took place in the fish-packing, pulp and paper, tobacco, building material, electric current, vegetable food and mineral product groups. Boot and shoe, rubber, textile and iron and steel factories, however, were slacker. Employment was in considerably greater volume than on May 1 in other years since 1920 except 1929, when the index stood at 119·8, compared with 112·4 on the date under review.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Animal Products, Edible.—Continued and larger increases in employment were noted in fish-packing plants and dairies; the improvement was much more extensive than that reported on May 1, 1929, but the index then was higher. Statements were tabulated from 211 firms in this group, employing 18,234 workers, or 1,200 more than at the beginning of April. The expansion took place chiefly in the Maritime Provinces, but the trend was generally upward.

Leather and Products.—Employment in boot and shoe and other leather factories showed a seasonally downward movement, according to 189 manufacturers with 16,213 employees, as compared with 16,445 in the preceding month. The largest declines were in Quebec and Ontario. The reduction involved rather more workers than that noted on May 1, 1929, but the situation than was slightly better.

Lumber and Products.—Seasonal activity caused a pronounced advance in this group, the improvement being particularly noteworthy in sawmills. Data were received from 727 employers of 50,017 persons, as against 46,377 in the preceding month. The increases were well distributed over the country, but those in Ontario were the greatest. Much larger addi-

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

tions to staffs had been registered on May 1, 1929, when the index was higher than at the beginning of May this year.

Musical Instruments.—Employment in musical instrument works showed a decrease, 51 operatives being let out by the 40 co-operating manufacturers, who had 1,864 workers. Employment was in less volume than in the corresponding period last year, when an advance had been indicated.

Plant Products, Edible.—There was an important increase in activity in edible plant product factories, chiefly in those producing sugar and syrup and canned goods. This advance contrasts with the reduction noted on May 1, 1929, when the index number was lower than at the beginning of May this year. Statements were compiled from 370 employers, whose payrolls aggregated 29,066 persons, as compared with 28,257 on April 1. There were gains in all provinces except Quebec.

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Pulp and Paper Products.—There was improvement in these industries, in which employment was in greater volume than in the spring in any other year of the record. Much of the gain took place in pulp and paper mills, while printing and publishing plants were rather slacker. The working forces of the 543 co-operating establishments aggregated 66,333 employees, as against 64,821 in their last report. Heightened activity was shown in all provinces except British Columbia.

Rubber Products.—Considerable losses were noted in rubber factories on May 1, 1930, while the tendency had been upward on the same date in 1929, when the index was many points higher. Returns were tabulated from 38 manufacturers employing 14,441 workers, or, 1,702 less than at the commencement of April. Most of the decrease was in Quebec and Ontario.

Textile Products.—There was seasonal falling-off in employment in this group at the beginning of May, according to statistics from 684 manufacturers having 83,991 persons on their payrolls, as compared with 85,896 on April 1. Cotton, hosiery and knitting and garment and personal furnishing factories released employees. Quebec and Ontario reported the bulk of the loss.

Tobacco, Distilled and Malt Liquors.—Data were received from 146 plants in this group employing 15,371 persons, or 237 more than in the preceding month. This increase, which was smaller than that recorded on May 1 last year, took place chiefly in tobacco factories in Quebec. Employment was at a lower level than on the same date in 1929.

Chemicals and Allied Products.—Employment in chemicals and allied products showed a moderate increase in Quebec and Ontario, according to information from 127 manufacturers, whose staffs included 7,965 workers, as against 7,869 in April. The index was several points higher than on May 1 a year ago, when the trend was also favourable.

Clay, Glass and Stone Products.—Building material factories in all provinces indicated seasonal improvement; the general gain was more marked than at the beginning of May last year, when the index number was, however, about two points higher. The 154 co-operating firms reported 12,564 employees, as against 11,240 in the preceding month.

Electric Current.—Further and more pronounced additions to staffs were recorded on May 1 in electric current plants, in which activity was greater than in the spring in any other year of the record. Statements were received from 96 companies employing 15,979 workers, an increase of 842 over their forces on April 1.

Electrical Apparatus.—The trend of employment in this group continued upward, 89 persons being added to the payrolls of the 57 reporting establishments, which had 16,753 employees. The improvement was largely confined to Ontario. Gains had also been registered on May 1, 1929, when the index number was much lower.

Iron and Steel Products.—The rolling mill, agricultural implement, steel shipbuilding, structural iron and steel and some other divisions of this group reported considerable decreases in activity, but there were gains in automobile heating appliance, sheet metal and iron pipe factories. Returns were tabulated from 682 manufacturers with 152,490 operatives, as compared with 153,262 in the preceding month. Improvement had been indicated at the beginning of May of last year and the situation then was more favourable. Quebec and Ontario reported the greatest losses on the date under review.

Non-Ferrous Metal Products.—Non-ferrous metal products showed a falling-off in employment, the working forces of the 112 co-operating firms declining from 19,875 at the beginning of April to 19,591 on May 1. There were small losses in all except the Prairie Provinces. Additions to staff were reported in this group in the same month in 1929, when the index number was higher.

Mineral Products.—Improvement was indicated in the mineral products group, the increases being more pronounced than on May 1 a year ago, when the index number was considerably lower. Reports were received from 84 manufacturers, whose payrolls included 14,136 persons, as compared with 13,395 in the preceding month. The greatest advance was in Quebec and the Prairie Provinces.

Logging

In spite of increases in British Columbia there was, on the whole, a decline in logging, according to 233 firms employing 16,966 men, or 6,473 less than in April. Curtailment was also registered at the beginning of May, 1929, when the index was higher; unfavourable weather conditions during the late winter had the effect of delaying river driving operations this spring.

Mining

Coal.—Employment in coal mining showed a reduction, which was more pronounced than in the same month of last year. The index then was slightly higher than on May 1, 1930. Data were received from 81 operators with 25,266 employees, as compared with 26,157 in the preceding month. Decreases took place in both eastern and western coal fields.

Metallic Ores.—There was a substantial improvement in metallic ore mines, chiefly in Ontario and British Columbia. An aggregate working force of 17,212 persons was employed by the 68 co-operating firms, who had 16,789 workers in their last report. Similar gains were indicated at the beginning of May a year ago, but employment this spring is better than in the same period of any other year of the record.

Non-Metallic Minerals (Other than Coal).—Employment in this group showed moderate gains; 70 employers enlarged their payrolls by 223 workers to 8,210 at the beginning of May. Quarries and other divisions reported heightened activity. The greatest advances were in Ontario, but the movement was generally upward. The index was lower than on May 1, 1929, when more pronounced improvement was reported.

Communications

Little general change was noted in telegraph and telephone operation, in which the level of employment was the same as on the corresponding date last year, though considerably higher than in the spring in any other year for which data are available. The co-operating branches and companies reported an aggregate working force of 30,524 persons.

Transportation

Street Railways and Cartage.—Continued and rather more pronounced improvement was shown in local transportation at the beginning of May, when the 144 firms from whom information was received, reported 24,619 employees, or 607 more than in the preceding month. The index was higher than on the same date in 1929 and earlier years. Quebec and Ontario registered most of the advance.

Steam Railways.—Steam railway operation afforded more employment in Quebec, Ontario, the Prairie Provinces and British Columbia, while curtailment was shown in the Maritime Provinces. Statements were received from 106 employers in this division, whose payrolls increased from 76,075 persons on April 1 to 78,718 at the beginning of May. An improvement had been noted on May 1, 1929, when the index was several points higher.

Shipping and Stevedoring.—A combined staff of 16,663 men, as compared with 14,312 in the preceding month, was reported by the 76 firms furnishing statistics in the water transportation group. This gain was rather smaller than that noted on the same date last year, when the index was slightly higher. Large reductions in the Maritime Provinces were offset by increases in Quebec and Ontario.

Construction and Maintenance

Building.—Employment in building construction continued to expand largely; the index stood at 127·6, as compared with 110·5 on April 1, 1930, and 114·3 on May 1, 1929. The working forces of the 704 co-operating contractors aggregated 49,838 persons, as against 43,167 at the beginning of April. The tendency was favourable in all provinces, but the greatest gains were in Quebec.

Highway.—Activity on roads and highways advanced very considerably, 8,026 men being added to the forces of the 224 employers making returns, who had 18,063 workers on May 1. All provinces registered noteworthy increases. The additions to staffs indicated on the same date last year were on a rather smaller scale, and employment then was in much smaller volume.

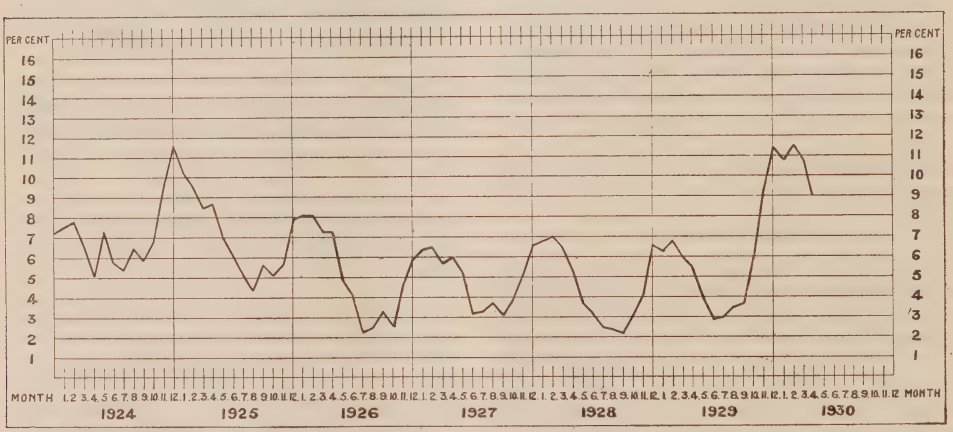
Railway.—Forty-six companies and divisional superintendents in this group employed 39,924 workers, as against 29,527 in the last report. All provinces shared in the upward movement, which, however, was most marked in Ontario. Expansion involving a larger number of men was noted at the beginning of May a year ago, when the index number stood above its level at the time of writing.

Services

The service group, especially the hotel and laundry divisions, reported heightened activity, according to statements from 238 establishments employing 22,147 persons, as against 21,599 in their last report. The situation was decidedly better than on May 1 in 1929 and earlier years of the record. Ontario registered the greatest gains.

Trade

Continued large additions to personnel were shown in trade, in which 764 establishments enlarged their forces by 1,828 employees to 86,372 on the date under review. The index was at its peak for the beginning of May in



the years for which data are available; with the single exception of December 1, 1928, it was also higher than in any month of the years 1920-1928. Improvement was noted in both retail and wholesale trade, the largest gains being in Ontario.

The accompanying tables give index numbers of employment by economic areas, leading cities, and industries. The columns headed "relative weight," show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns on May 1, 1930.

(2) Unemployment in Trade Unions at the Close of April, 1930

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The improvement in employment conditions affecting local trade union members which was apparent at the close of March, continued throughout April with increased impetus, resulting at the close of the month in an unemployment percentage of 9·0 contrasted with 10·8 per cent in March. A considerable falling off in activity, however, from April of last year, when 5·5 per cent of the members reported were idle, was indicated. The percentage for the month under review was based on the returns received from an aggregate of 1,719 labour organizations, with 206,326 members, 18,581 of whom were unemployed on the last day of the month. The advance in employment recorded in comparison with March, and shared in all provinces except Nova Scotia, was attributable especially to further recovery from winter dullness in the building and construction trades, though the employment trend generally throughout the various industries was upward from the previous month. In Nova Scotia the situation remained on practically the same level during both months under comparison. Alberta, Saskatchewan, Ontario and Manitoba unions showed substantial declines in activity when compared with April a year ago, while contractions of lesser magnitude occurred among British Columbia and New Brunswick unions. On the other hand, Quebec and Nova Scotia reported minor improvement in conditions.

Each month a separate tabulation is made of unemployment affecting trade union members in the largest city in each province except Prince Edward Island. During April Edmonton and Halifax unions reported the largest unemployment percentages of the cities used for comparison which were nominally larger than were recorded in the same cities during March. In all other cities, however, improved

conditions were reported, Regina and Vancouver, each with a 4·6 per cent employment gain showing the most noteworthy expansion, followed by lesser increases in Toronto, Montreal, Winnipeg and Saint John. Montreal unions alone reported a greater volume of activity than in April a year ago, while of the reductions those registered by Edmonton and Regina unions were the most outstanding.

The chart which accompanies this article indicates the trend of unemployment by months from January 1924, to date. The curve during April continued in the downward course of the preceding month, showing that employment was in greater prevalence. The level attained by the curve at the end of April, however, was considerably higher than in the same month last year, indicating less favourable conditions during the month reviewed.

The manufacturing industries reported a slightly upward employment trend during April from both the previous month and April last year, as shown by the reports tabulated from 486 unions representing 58,724 members. Of these 3,887 were idle on the last day of the month, a percentage of 6·6 contrasted with 7·4 per cent of unemployed members in March and 7·0 per cent in April, 1929. Activity for pulp and paper makers showed the most noteworthy advance from March, Ontario unions being largely responsible for the change. In addition iron and steel workers reported slight improvement and among wood, glass and unclassified workers a somewhat higher level of employment was maintained. On the other hand, less work was afforded textile, fur and jewelry workers and printing tradesmen. Though the unemployment percentage in the manufacturing industries, as a whole, showed little change from April of last year, still wide fluctuations were apparent in various groups these being of a rather offsetting nature. The most pronounced change occurred among garment workers, who indicated large increases in activity over April last year. Wood workers also recorded some improvement in conditions. On the contrary, substantial reductions in employment were reflected by iron and steel workers, while declines of a lesser extent, though noteworthy, were registered by pulp and paper makers, textile, fur, glass, jewelry and unclassified workers, printing tradesmen and cigar makers.

From unions of coal miners 43 reports were tabulated during April covering a membership of 16,022 persons, 1,375 of whom, or a percentage of 8·6 were idle at the end of the month contrasted with 9·6 per cent of unemployment in March and with 8·4 per cent in April last year. Alberta unions were wholly responsible for the better situation prevailing when compared with March, conditions for Nova Scotia and British Columbia unions remaining about the same in both months. Employment for Alberta and British Columbia miners was at a lower level during April than in the same month a year ago, while Nova Scotia mine workers reported some improvement. A large number of miners continued to show greatly reduced time.

Continued and more pronounced expansion in building operations was reported during April, the percentage of idleness at the end of the month standing at 23·2 in contrast with 30·5 per cent in March. The April per-

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

centage was based on the returns tabulated from 211 unions of building tradesmen with 29,171 members. Employment, however, declined from April last year, when 11·3 per cent of the members reported were idle. Especially noteworthy were the gains among carpenters and joiners and brick layers, masons and plasterers when compared with March, who together form a large proportion of the workers engaged in the building trades. The improvement indicated by painters, decorators and paperhangers was also substantial, and among plumbers and steamfitters, granite and stone cutters, hod carriers and building labourers and electrical workers the level of activity was somewhat higher. Bridge and structural iron workers and tile layers, lathers and roofers, however, reported curtailment in the employment volume accorded. All tradesmen shared to some extent in the unfavourable situation indicated in the building trades over April last year, carpenters and joiners reporting contractions involving the greatest number of workers.

The situation among transportation workers during April was slightly better than in the preceding month, the 738 unions from which reports were tabulated, with 72,160 members, showing 6·8 per cent of idleness, contrasted with 7·5 per cent in March. This increase in employment during April was due entirely to gains among steam railway employees, whose returns constitute over 79 per cent of the entire group membership reporting, navigation workers and teamsters and chauffeurs showing practically no change in the percentage out of work and street and electric railway employees nominal reductions in activity. A lower employment level was indicated by all groups in comparison with April last year, when 2·6 per cent of idleness was reported in the transportation industries as a whole, steam railway employees being the most important factor in the downward employment trend.

Reports from longshore workers which are tabulated separately each month showed at the close of April an unemployment percentage of 23·7 contrasted with 14·0 per cent in March and with 22·9 per cent in April, 1929. The percentage for the month under review was based on the reports tabulated from 12 unions of these workers, with 7,122 members.

From associations of retail clerks 5 returns were received at the end of April covering a membership of 1,229 persons, all of whom were reported busy on the last day of the month as in March, contrasted with ·9 per cent of inactivity in April last year.

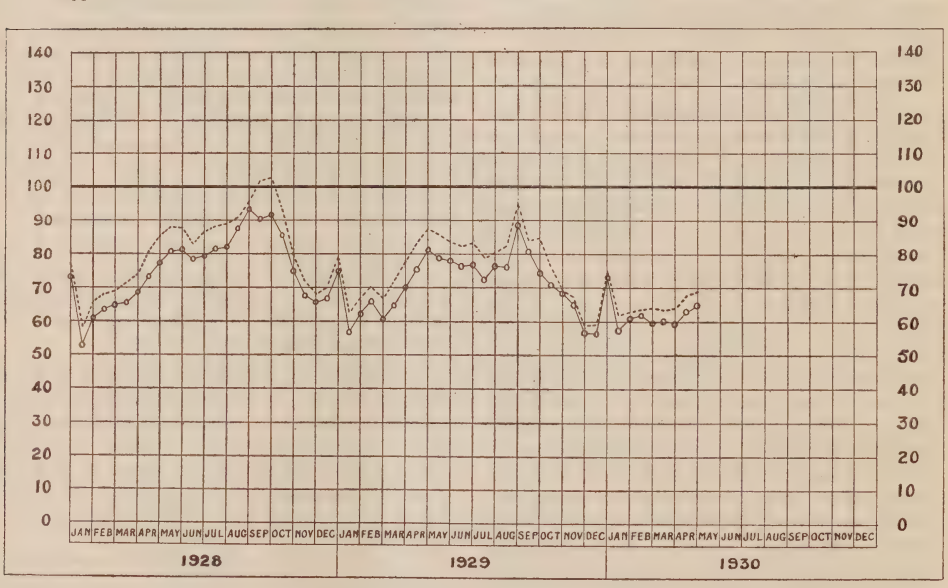
Civic employees registered slight improvement during April from the previous month, the 67 unions from which reports were tabulated with 7,655 members showing ·5 per cent of idleness compared with percentages of 1·9 in March and ·8 in April, 1929.

Reports tabulated from 115 unions of workers in the miscellaneous group of trades at the close of April with an aggregate membership of 6,784 persons indicatd 7·2 per cent of unemployment compared with 10·0 per cent in March and 3·9 per cent in April, 1929. In the unclassified section of the group the situation was much better than in March, while slight gains in activity were recorded by theatre and stage employees, stationary engineers and firemen and barbers. On the other hand, hotel and restaurant employees reported nominal reductions in the employment volume. All tradesmen in the group were less actively engaged than in April a year ago, stationary engineers and firemen reporting the most noteworthy employment recessions.

Fishermen with 3 unions embracing 783 members at the end of April reported an unemployment percentage of 1·3 contrasted with 1·8 per cent of idleness in March and with 2·6 per cent in April, 1929.

The situation for lumber workers and loggers was more favourable during April than either the previous month or April last year, the 5 unions from which reports were tabulated with 1,214 members showing 11·9 per cent of unemployment compared with 17·9 per cent in March and 18·3 per cent in April last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive and also the percentage of unemployment by provinces for April each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as table I.



(3) Employment Office Reports for April, 1930

The volume of business transacted by the offices of the Employment Service of Canada during April, 1930, as indicated by the average daily placements effected, showed 32 per cent increase when compared with that of the preceding month, while a loss of 23 per cent was recorded from that of April last year. Manufacturing, farming, transportation, construction and maintenance and services all contributed to the gain over March, the most noteworthy increases occurring in farming and services. In comparison with April, 1929,

all industrial divisions recorded declines, the heaviest being in farming, manufacturing and services.

The accompanying chart shows the trend of employment from January, 1928 to date, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for employment registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications showed a marked upward trend throughout the month, but at the close of the period had not nearly approached the levels attained at the end of April, 1929, when the curve of vacancies was

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

18 points and that of placements 16 points above those recorded at the close of the month under review. The ratio of vacancies to each 100 applications was 68.3 and 69.3 during the first and second half of April, respectively, in contrast with ratios of 83.3 and 87.7 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 63.2 and 65.3 as compared with 75.5 and 81.3 during April, 1929.

The average number of vacancies reported daily to the offices of the Service throughout Canada was 1,265 as compared with 948 in the previous month and with 1,663 in April, 1929.

The average number of applications for employment received daily by the offices during the month under review was 1,840 as compared with 1,488 in March and with 1,941 in April last year.

The average number of placements made daily by the offices of the Service during April, 1930, was 1,180, of which 648 were in regular employment and 532 in work of one week's duration or less, as compared with a total daily average of 892 during the preceding month. Placements in April last year averaged 1,525 daily, consisting of 1,029 placements in regular and 496 in casual employment.

During the month of April, 1930, the offices of the Service referred 29,617 persons to vacancies, and effected a total of 28,325 placements. Of these, the placements in regular employment were 15,547; of which 11,580 were of men and 3,967 of women, while placements in casual work totalled 12,778. The number of vacancies reported by employers was 20,028 for men and 10,322 for women, a total of 30,350, while applications for work numbered 44,145, of which 31,226 were from men and 12,919 from women.

The following table gives the placements effected by the offices of the Emploment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (4 months)	52,743	46,752	99,495

NOVA SCOTIA

Orders listed at employment offices in Nova Scotia during April showed an increase of nearly 28 per cent in comparison with the preceding month, and of nearly 3 per cent when compared with the corresponding month last year. There was an increase of over 26 per cent in placements in comparison with March, and of nearly 11 per cent when compared with April, 1929. Fewer placements were made under construction and maintenance and manufacturing than during April last year, but these declines were more than offset by gains under services and trade. The changes in other divisions were nominal only. Industrial groups in which most of the placements were effected during the month were: manufacturing, 31; transportation, 33; construction and maintenance, 77; trade, 75 and services, 494, of which 358 were of household workers. During the month 95 men and 70 women were placed in regular employment.

NEW BRUNSWICK

Opportunities for employment as indicated by orders received at employment offices in New Brunswick during April were nearly 29 per cent better than in the preceding month, but 9 per cent less than during the corresponding month last year. There was a gain of nearly 30 per cent in placements over March, but a decline of over 9 per cent when compared with April, 1929. Services and finance were the only groups in which more placements were made during the month under review than in April last year. Of the declines, those in transportation, logging and manufacturing were the most noteworthy. Placements by industrial divisions included: manufacturing, 17; logging, 22; construction and maintenance, 97; trade, 18; and services, 636, of which 494 were of household workers. There were 134 men and 71 women placed in regular employment during the month.

QUEBEC

There was an increase of nearly 66 per cent in the number of orders received by employment offices in the province of Quebec when compared with the preceding month, but a decline of over 13 per cent in comparison with the corresponding month last year. Placements were 53 per cent higher than in March, but over 24 per cent less than in April, 1929. The reduction in placements from April last year was due in large measure to the decline in placements under building construction, in which group considerable work was in progress during April, 1929. There were, however, fewer placements in all other divisions except services and mining and in these the gains were nominal only. Industrial groups in which most of the placements were effected during the month were: manufacturing, 140; logging, 244; farming, 39; construction and maintenance, 365; trade, 30; and services, 699; of which 454 were of household workers. Placements in regular employment numbered 881 of men and 384 of women.

ONTARIO

Employment opportunities as indicated by orders listed at Ontario offices during April were nearly 7 per cent better than in the preceding month, but nearly 25 per cent less favourable than during the corresponding month last year. There was a gain of nearly 5 per cent in placements over March, but a decline of nearly 23 per cent in comparison with April, 1929. Communication showed a small gain in placements over April last year, but there were declines in all other divisions. Those under manufacturing and services were quite substantial and accounted for about 66 per cent of the decrease. There were notable reductions also in transportation and logging, placements. Placements by industrial divisions included: manufacturing, 1,083; logging, 493; farming, 895; mining, 56; transportation, 283; construction and maintenance, 3,691; trade, 509; and services, 4,592, of which 2,548 were of household workers. During the month 4,299 men and 1,476 women were placed in regular employment.

MANITOBA

During the month of April, positions offered through employment offices in Manitoba were nearly 49 per cent higher than in

95 placements effected by offices since closed

the preceding month, but over 32 per cent less than during the corresponding month last year. There was an increase of 57 per cent in placements when compared with March, but a decline of 31 per cent when compared with April, 1929. All industrial divisions participated in the declines in placements from April last year, those in farming, services and construction and maintenance being the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 98; logging, 41; farming, 871; construction and maintenance, 463; trade, 85; and services, 2,061, of which 1,643 were of household workers. Regular employment was found for 1,369 men and 651 women.

SASKATCHEWAN

Employment Offices in Saskatchewan were notified of 92 per cent more vacancies during April than in the preceding month, but nearly 38 per cent less than during the corresponding month last year. There was a gain also of about 92 per cent in placements when compared with March, but a decline of over 38 per cent in comparison with April, 1929. Construction and maintenance was the only group in which more placements were made during the month under review than in April last year, and this gain was due to work undertaken in relief of unemployment in the highway division of this group. Of the declines those in farming were the most pronounced and accounted for over 75 per cent of the net decrease. Placements by industrial divisions included: manufacturing, 79; farming, 1,120; transportation, 44; construction and maintenance, 924; trade, 75; and services, 1,130, of which 687 were of household workers. There were 1,449 men and 573 women placed in regular employment during the month.

ALBERTA

The demand for workers as indicated by orders received at employment offices in Alberta during April was nearly 3 per cent greater than in the preceding month, but nearly 36 per cent less than during the corresponding month last year. There was an increase of over 3 per cent in placements when compared with March, but a decline of 27 per cent in comparison with April, 1929. As in Saskatchewan there was a large decrease in farm placements in comparison with April a year ago. Fewer placements were also made in manufacturing, services, trade, transportation and logging. The only gain of importance was in the highway division of construction and maintenance due to work undertaken in relief of unemployment. The changes in other divisions were nominal only. The majority of the placements made during the month were in the following groups: manufacturing, 217; farming, 1,335; construction and maintenance, 645; trade, 69; and services, 991, of which 692 were of household workers. During the month 1,921 men and 422 women were placed in regular employment.

BRITISH COLUMBIA

During April, orders received at employment offices in British Columbia called for 28 per cent more workers than in the preceding month, but over 21 per cent less than during the corresponding month last year. There was an increase of nearly 29 per cent in placements when compared with March, but a decline of nearly 23 per cent when compared with April, 1929. The only gain of importance in placements over April last year was in the highway division of construction and maintenance, and was due to relief work provided for the unemployed. Of the declines, those in manufacturing, farming, services and logging were the most noteworthy. Industrial groups in which most of the placements were effected during the month were: manufacturing, 286; logging, 187; farming, 251; transportation, 149; construction and maintenance, 1,171; trade, 51; and services, 1,024, of which 602 were of household workers. There were 1,432 men and 320 women placed in regular employment during the month.

Movement of Labour

During the month of April, 1930, the offices of the Employment Service of Canada made 15,547 placements in regular employment, 8,778 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,203 were granted the Employment Service reduced transportation rate, 803 going to points within the same province as the despatching office and 400 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices issued 10 certificates for reduced transportation during April, 5 provincial and 5 interprovincial. Of the former, 3 were

granted at Montreal to sawmill labourers and 2 at Hull to highway construction labourers going to employment within their respective zones. The transfers outside the province were of bushmen sent from Hull to the Pembroke zone.

Business transacted by Ontario offices during April involved an issue of 86 reduced rate certificates, 85 of which were provincial. Of these 58 were granted at Port Arthur to bush workers going to employment within the same zone. The Port Arthur zone was also the destination of 9 power construction workers and 1 electric welder shipped from Toronto and 1 millwright from Kingston. The Toronto office, in addition, transferred 1 cook to Ottawa and 1 electric welder to Sudbury. From Pembroke 1 carpenter and 1 millwright went to Sudbury and 3 sawmill workers to Sault Ste. Marie, while from Fort William 1 lead burner and 1 construction labourer proceeded to Sudbury and 7 bushmen to employment in the Fort William zone. The transfer outside the province was of a farm hand going to Regina from Toronto.

In Manitoba 694 persons secured certificates for reduced transportation in April, 331 of whom were destined to provincial employment and 363 to centres in other provinces. The Winnipeg office was responsible for the transfer of all these workers. Within the province 3 farm hands, 12 farm household workers and 1 town general were despatched to the Brandon zone, 3 hotel employees, 2 farm housekeepers and 1 laundress to Dauphin and vicinity, and 171 farm hands, 3 farm household workers, 120 highway construction workers, 2 bushmen, 3 sawmill labourers, 8 mine workers, 1 camp cook, and 1 railway construction labourer to various points within the Winnipeg zone. The movement outside the province comprised the transfer of 176 railway construction workers, 106 of whom went to Swift Current, 38 to North Battleford and 32 to Prince Albert. To the Swift Current zone, in addition, were transferred 35 teamsters and to the Prince Albert zone also, 9 sawmill labourers and 7 river drivers. Travelling to the centres within the Moose Jaw zone were 23 highway construction workers, to Regina 3 hotel employees, and to Saskatoon 12 teamsters. Port Arthur and surrounding territory received 4 farm hands, 1 town general, 2 navigation workers, 3 hotel employees, 1 blacksmith, and 1 bushman, while the remaining interprovincial transfers, 86 in number, were of farm labour, 74 farm hands and 12 farm household workers proceeding to employment at various points within the province of Saskatchewan.

During April 79 workers took advantage of the reduced rate from Saskatchewan centres, 78 of whom went to provincial employment. A large share of this movement within the province was to the farming localities, the Regina office assisting in the transfer of 31 farm hands and 5 farm domestics, Saskatoon of 14 farm hands and 5 farm household workers, and Moose Jaw of 11 farm hands and 1 farm housekeeper. The Regina office also despatched 1 hotel worker and 1 highway construction cook to Swift Current, 1 store clerk to Prince Albert, 1 housekeeper to Moose Jaw and 1 groom to employment within the Regina zone. Bound from Saskatoon in addition were 1 cook, 1 waitress and 1 bushman, going to Prince Albert. The balance of the provincial movement originated at Prince Albert, from which point 1 highway construction worker was conveyed to Moose Jaw, 1 railway construction cook to North Battleford and 1 river driver within the Prince Albert zone. The one interprovincial transfer was of a carpenter who journeyed from Regina to Dauphin.

Certificates granted by Alberta offices during April were 245 in number, 221 of which were to provincial points and 24 to stations outside the province. Of the workers travelling on provincial certificates, 177 were despatched from Edmonton and included 4 farm hands proceeding to Drumheller, 3 farm hands to Calgary, 2 sawmill workers and 2 farm hands to Lethbridge, and 56 sawmill workers, 33 farm hands, 17 bushmen, 23 highway construction workers, 17 labourers, 13 mine workers, 1 store clerk, 4 painters, 1 cook, and 1 waiter to employment at various points within the Edmonton zone. In addition, the Calgary office was instrumental in the transfer of 9 farm hands and 3 farm domestics to Drumheller, 4 farm hands and 1 housekeeper to Medicine Hat, 3 farm hands to Edmonton, 2 farm hands and 1 cook to Lethbridge, and 19 farm hands and 2 farm domestics within the Calgary zone. Of the workers going to employment in other provinces Edmonton despatched 11 farm workers and 1 maid to Saskatoon, 2 railway construction workers and 1 farm hand to Swift Current, and 1 farm hand and 1 farm domestic to North Battleford, while from Calgary 2 farm hands and 1 farm housekeeper were sent to Revelstoke, 1 cook and 1 farmhand to Cranbrook, and 1 farm hand and 1 farm domestic to Moose Jaw.

The British Columbia offices transferred 89 persons at the special reduced rate in April,

83 to provincial situations and 6 to employment at points outside. The Vancouver office was responsible for the movement within the province of 71 persons, 32 of whom, including 12 bushmen, 9 tunnel construction workers, 5 carpenters, 1 welder, 1 rod man, 2 flunkeys, 1 cook and 1 housekeeper were destined to employment within the territory covered by that office. From the same centre also the Nelson zone received 15 railway construction workers and 4 sawmill labourers; Kamloops 3 bush workers, 3 sawmill workers, 1 farm hand, 1 orderly, and 1 highway construction worker; Penticton 3 mine workers, 1 farm hand and 2 sawmill workers; Revelstoke 2 mine workers; Prince George 2 farm hands; and Cranbrook 1 engineer. In addition, the Nelson office effected transfers of 8 bushmen, 1 engineer and 1 farm hand; Prince Rupert of 1 miner; and Prince George of 1 farm hand to employment within their respective zones. Travelling outside the province from Vancouver were 1 handyman and 1 farm hand going to Calgary, 1 farm domestic to Lethbridge and 1 farm hand to Edmonton, while from Vernon 1 farm hand and 1 farm domestic were conveyed to Moose Jaw.

Of the 1,203 persons who took advantage of the Employment Service reduced transportation rate during April 652 travelled by the Canadian National Railways, 536 by the Canadian Pacific Railway, and 15 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During April, 1930

The Dominion Bureau of Statistics tabulated returns from 61 cities which granted building permits valued at $16,276,443 during April, as compared with $13,352,640 in the preceding month and $29,656,709 in the same month last year, which had constituted a high record for the month of April. There was, therefore, an increase of $2,923,803 or 21·9 per cent in the first comparison, but a decrease of $13,380,266, or 45·1 per cent as compared with April, 1929. The aggregate for the elapsed months of this year, viz., $45,646,694, was only twice exceeded in the years since 1920, the totals for 1929 and 1928 having been larger. This year, however, wholesale costs of building materials have averaged lower than in any of the past ten years.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,400 permits for dwellings valued at over $5,000,000 and for some 3,300 other buildings estimated to cost more than $8,000,000. In March, authority was given for the erection of some 1,000 dwellings and 1,900 other buildings, valued at approximately $4,000,000 and $9,000,000, respectively.

Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta recorded increases in the value of building permits issued during April as compared with March, the greatest gains of $1,218,824, or 23·2 per cent, and $1,087,129, or 478·1 per cent, taking place in Ontario and New Brunswick, respectively.

As compared with April, 1929, Prince Edward Island, New Brunswick and Alberta reported increases in the value of the building authorized; New Brunswick indicated the most pronounced advance of $1,113,085. Among the remaining provinces, the greatest decline, of $4,307,677 or 63·5 per cent, was in Quebec.

Of the larger cities, Toronto and Winnipeg registered increases in the building authorized during April as compared with the preceding month, but losses as compared with April, 1929. In Montreal and Vancouver there were declines in both comparisons. Of the smaller centres, Charlottetown, Saint John, Three Rivers, Guelph, London, Owen Sound, Stratford, Sarnia, Nanaimo and North Vancouver reported increases in the value of the building represented by the permits issued, as compared with March, 1930, and April, 1929.

Cumulative Record for First Four Months, 1920-1930.—The following table gives the value of the building authorized by 61 cities during April and in the first four months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first four months of the same years are also given (1926=100).

Year.	Value of permits issued in April	Value of permits issued in first four months	Indexes of value of permits issued in first four months (1920=100)	Average indexes of wholesale prices of building materials in first four months (1926 average=100)
	$	$		
1930.....	16,276,443	45,646,694	132·1	96·2
1929.....	29,656,709	72,606,937	210·1	99·2
1928.....	18,606,167	51,769,505	149·8	96·8
1927.....	17,312,470	42,340,823	122·5	96·8
1926.....	19,044,499	41,538,073	120·2	101·7
1925.....	15,482,383	35,463,398	102·6	103·1
1924.....	13,689,101	31,737,100	91·8	111·6
1923.....	19,530,851	39,008,970	112·9	110·8
1922.....	15,833,688	34,513,861	99·9	107·7
1921.....	13,500,360	27,069,872	78·3	136·9
1920.....	15,648,915	34,558,901	100·0	143·1

The aggregate for the first four months of this year was smaller than in 1929 and 1928, but was substantially higher than in any of the eight preceding years, while the average index number of wholesale prices of building materials was lower than in any other year of the record.

The accompanying table gives the value of the building permits issued by 61 cities during April and March, 1930, and April, 1929. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES.

Workers' Health and Accident Prevention

The Province of Quebec Safety League in Safety Leaflet No. 29, directs the attention of employers to the necessity for maintaining the physical fitness of their workers if accidents are to be prevented. "The first requirement in a safe worker is health, or, if you prefer, perfect physical fitness. Our impression is that this point of view has been somewhat neglected by safety educators. We have many very learned works on the mental causes of accidents. The authors are clever and experienced psychologists. They emphasize the importance of mental testing, of mental hygiene, and of safety-mindedness. We have found that very few of them attach enough importance to the health element."

The following questions are addressed to employers:—

1. Are your workrooms well lighted and are the lights properly shaded so that there may be no glare in the workers' eyes?

2. Are your workrooms well ventilated (by windows or fans) and is the air kept fresh and cool?

3. Are your workrooms clean and, as much as possible free from dust?

4. Do you provide a good supply of drinking water as well as ample facilities for washing up after work?

5. Are your toilets and washrooms well lighted and clean?

6. Are places where poisons are handled provided with proper means for ventilation and for personal cleanliness?

7. Is there a first aid room in your shop or at least a first aid kit in your workrooms?

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during April is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labor, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for May, 1930, and previous months are reproduced below.

Great Britain

Employment showed a slight improvement on the whole during the first fortnight in April, but in a number of industries Easter holiday suspensions were extended, and at the end of the month the position was rather worse than at the end of March. The principal industries in which there was a net increase in unemployment included coal-mining, slate quarrying, the pottery and glass industries, iron and steel manufacture, engineering, iron-founding and most other metal trades, the textile and leather trades, and boot and shoe manufacture. On the other hand there was a further seasonal improvement in the building industry, in a number of clothing trades, and in the motor vehicle industry. Employment also improved in the tinplate industry.

Among the workpeople numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at April 28, 1930 (including those temporarily stopped as well as those wholly unemployed) was 14.6, as compared with 14.0 at March 24, 1930, and with 9.8 on April 22, 1929. The percentage wholly unemployed at April 28, 1930, was 10.8, as compared with 10.6 at March 24, 1930; while the percentage temporarily stopped was 3.8 as compared with 3.4. For males alone the percentage at April 28, 1930, was 14.9, and for females 13.8; at March 24, 1930, the corresponding percentages were 14.5 and 12.8. The total number of applicants for employment registered at Employment Exchanges in Great Britain and Northern Ireland at April 28, 1930, was approximately 1,752,000, of whom 1,242,000 were men and 416,000 were women, the remainder being boys and girls. At March 31, 1930, it was 1,731,000, of whom 1,238,000 were men and 410,000 were women; and at April 29, 1929, it was 1,198,000, of whom 930,000 were men and 197,000 women.

United States

Employment in the United States decreased 0.2 per cent in April, 1930, as compared with March, 1930, and pay-roll totals decreased 0.7 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of January and February, 1930, and therefore cannot be included in the general statement for the month of April. The number of employees of Class I railroads as at February 15 totalled 1,527,386, representing a decrease of 1.1 per cent since January 15, 1930. The amount of pay-roll in the entire month of February was $205,135,719, representing a decrease over the previous month of 8.9 per cent.

Employment in manufacturing industries decreased 0·8 per cent in April as compared with March, a decrease not unusual since decreased employment in April has been shown in five of the last seven years preceding 1930; pay-roll totals decreased 1·1 per cent.

The per cents of change in April in employment and pay-roll totals in manufacturing industries are based upon returns made by 13,016 establishments in 54 of the principal manufacturing industries of the United States. These establishments in April, 1930, had 3,206,003 employees whose combined earnings in one week were $86,288,420.

The bureau's weighted index of employment for April, 1930, is 89·1, as compared with 89·8 for March, 1930, 90·3 for February, 1930, and

99·1 for April, 1929; the index of pay-roll totals for April, 1930, is 89·8, as compared with 90·8 for March, 1930, 90·7 for February, 1930, and 104·6 for April, 1929. The monthly average for 1926 equals 100.

The stone-clay-glass group of industries gained 3·6 per cent in employment in April and the vehicle group 0·9 per cent, while both groups reported even larger increases in pay-roll total; the iron and steel group showed a drop of 0·2 per cent in employment with no change in pay-roll totals. Each of the remaining 9 groups reported decreased employment and pay-roll totals, the textile group showing the most pronounced losses in the two items—2·3 per cent and 6·3 per cent, respectively.

Fourteen of 54 separate industries had more employees in April than in March, the notable gains having been 8·9 per cent in brick, 8 per cent in cement, 7·1 per cent in ice cream, 4·8 per cent in fertilizers, 3·4 per cent in rubber tires, 3·2 per cent in automobiles, 2·6 per cent in cast-iron pipe, 1·1 per cent in structural ironwork, and 0·5 per cent in iron and steel. In each of these industries the increases in pay-roll totals were considerably greater than the increases in employment.

Each of the 10 separate industries of the textile group reported fewer employees in April than in March. Woollen goods fell off 6·5 per cent, men's clothing 5·6 per cent, cotton goods 0·9 per cent, and knit goods 0·2 per cent. Machine tools reported a decrease of 3·4 per cent; furniture, 3·6 per cent; agricultural implements, 6 per cent; electrical goods, 1·9 per cent.

Six industries—rayon, radio, aircraft, jewelry, paint, and rubber goods (other than rubber boots, shoes, tires, and tubes)—which are not yet a part of the bureau's indexes of employment and pay-roll totals for manufacturing industries, are included in the monthly employment survey. Only one of these industries, paint and varnish, reported increased employment in April, a gain of 0·8 per cent. The decreases in employment in the remaining 5 industries were 1·1 per cent in rayon, 13·8 per cent in radio, 2·8 per cent in aircraft, 2·4 per cent in jewelry, and 3·4 per cent in rubber goods.

Increased employment of 1 per cent was shown in April in the Pacific geographic division and very small increases in the East North Central, South Atlantic, and East South Central divisions.

The New England division showed a drop of 2 per cent in employment and a drop of 3·2 per cent in pay-roll totals, the Middle Atlantic division decreases of 1·5 per cent and 2·6 per cent in the two items, and the West South Central division decreases of 1·3 per cent and 1·5 per cent. Other decreases were small.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1828, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent.

The annual congress of the Co-operative Union of Canada is to be held at the King Edward Hotel, Toronto, on July 15, 16 and 17. Messrs. T. B. Stirling and William Gallacher, directors of the Scottish Co-operative Wholesale Society, will represent that society, and it is probable that representatives of the Co-operative Wholesale Society (England) will also be in attendance. All non-affiliated societies of which the Co-operative Union of Canada has record have been invited to accredit fraternal delegates, and to participate in the proceedings. Societies which have failed to receive invitations, and wish to be represented should apply to The Co-operative Union of Canada, 215 Nelson Street, Brantford, Ontario, when credential blanks will be sent them.

Industrial accidents in Ontario for the first five months of 1930, showed a decrease of 3,848 from last year, and the benefits awarded have decreased from $3,330,530 to $3,117,013 during the same period. During May there were 6,177 accidents reported to the Workmen's Compensation Board, as compared with 7,485 during May last year, and 6,538 during May, 1928. The fatal cases numbered 46, the same as during May, 1928, but 14 more than the number during May last year. The benefits awarded amounted to $570,303, of which $444,507 was for compensation and $125,796 for medical aid.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time

to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF MARINE AND FISHERIES

Contract in Group "A" (Construction, etc.)

Construction of two demonstration boats. Name of contractors, C. J. O'Hanley, Ltd., Yarmouth, N.S. Date of contract, April 10, 1930. Amount of contract, $2,921. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE

(Contract in Group "A" Construction, etc.)

Construction of Radio Station Buildings at Fort Norman, N.W.T. Name of contractors, Wm. Brown & Co., Edmonton, Alta. Date of

contract, May 27, 1930. Amount of contract, $34,789. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages not less than	Hours not more than
	per hour	per day
Plasterers	$1 45	8
Bricklayers	1 45	8
Masons	1 45	8
Plumbers & steamfitters	1 15	8
Electricians	1 00	8
Cement finishers	1 00	8
Carpenters & joiners	1 00	8
Teamsters with team & wagon	95	8
Painters & glaziers	95	8
Roofers	80	8
Plasterers' helpers	65	8
Plumbers' & steamfitters' helpers	60	8
Electricians' helpers	50 to 60	8
Cement mixer engineers	50	8
Gasoline cement mixers	50	8
Truck drivers	50	8
Common labourers	45	8

Overtime may be permitted in case of necessity on basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

DEPARTMENT OF PUBLIC WORKS

(Contracts *in Group "A" Construction, etc.)*

Construction of a strauss and trunnion bascule bridge over Burlington Channel, Ont. Name of contractors, Hamilton Bridge Co., Ltd., Hamilton, Ont. Date of contract, May 1, 1930. Amount of contract, approximately $236,006. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours not more than
	Per hour	per day
Structural ironworkers	$1 00	10
Carpenters	1 00	8
Labourers	40	10
Concrete workers	40	10
Motor truck & driver 5 ton truck	2 50	10
Motortruck & driver 1& 2 ton	1 25	10
Motor truck driver	50	10

N.B.—In connection with the rates for Carpenters and Joiners, this rate to apply to all form building, crib building, etc.

Time and half to be paid to all workmen employed above the hours specified according to the prevailing conditions of they trades involved.

Construction of new federal building at Camrose, Alta. Name of contractors, Bernard P. Scanlon and James H. Kennedy, Medicine Hat, Alta. Date of contract, May 7, 1930. Amount of contract, $44,932 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours Not more than
	Per hour	Per day
Bricklayers	$1 45	8
Stonemasons	1 45	8
Hollow tile setters	1 45	8
Plasterers	1 45	8
Marble setters	1 45	8
Plumbers & steamfitters	1 15	8
Sheet Metal workers	1 10	8
Carpenters & joiners	1 00	8
Concrete finishers	1 00	8
Electricians	1 00	8
Metal lathers	1 00	8
Structural steel workers	1 00	8
Terrazzo layers	1 00	8
Painters & glaziers	95	8
Felt & gravel roofers	80	8
Ornamental iron workers	75	8
Plasterers' helpers	60	8
Plumbers' helpers	60	8
Steamfitters' helpers	60	8
Terrazzo layers' helpers	60	8
Sheet metal workers' helpers	60 to 75	8
Electricians' helpers	50 to 60	8
Concrete mixers & layers	50	8–10
Common labourers	45	8–10
Teamsters with team & wagon	90	8–10

Construction of repairs to the western breakwater at Port Colborne, Ont. Name of contractors, The C. S. Boone Dredging & Construction Co., Ltd., Toronto, Ont. Date of contract, May 12, 1930. Amount of contract, approximately $33,564.60. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Saint Paschal, P.Q. Name of contractor, Mr. Zenon Ouellette, Rimouski, P.Q. Date of contract, May 19, 1930. Amount of contract, $15,585 and unit prices. The General Fair Wages Clause was inserted in the contract.

Dredging in Collingwood Harbour, Ont. Name of contractor, Wm. L. Forrest, Goderich, Ont. Date of contract, May 20, 1930. Amount of contract, approximately, $48,457.50. The General Fair Wages Clause was inserted in the contract.

Docking, cleaning, painting and repairing Dredge P.W.D. No. 303 "Frühling." Name of contractors, Burrard Dry Dock Co., Ltd., North Vancouver, B.C. Date of contract, April 29, 1930. Amount of contract, $16,780 and unit prices. The General Fair Wages Clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc.)

Interior fittings for the public building at Trail, B.C. Name of contractors, The Interior Hardwood Co., Ltd., Kitchener, Ont. Date of contract, May 26, 1930. Amount of contract, $3,990. The General Fair Wages Clause was inserted in the contract.

Interior fittings for the public building at St. Romuald, P.Q. Name of contractors, Wood Specialties, Ltd., Alexandria, Ont. Date

of contract, May 14, 1930. Amount of contract, $1,250. The General Fair Wages Clause was inserted in the contract.

Scales.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	62 60
Letter boxes, etc.	
Capital Brass, Ltd., Ottawa, Ont.	25 00
Stamping ink, etc.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	123 30
J. E. Poole Co., Toronto, Ont.	69 77
Satchels.	
Woods Mfg. Co., Ottawa, Ont.	377 44

FAIR WAGES SCHEDULE FOR MANITOBA, 1930-1931

UNDER the provisions of Section 10 of Chapter 69, Consolidated Amendments, 1924, being "An Act to establish and Protect the Wages of Workmen Employed on Public Works," the Minister of Public Works of Manitoba has approved of the rate per hour and working hours set forth in the following schedule, as the minimum rate per hour payable to any employee engaged in the respective trades, and the maximum number of hours during which any employee engaged in the respective trades shall be required to work. The schedule will apply and be effective for employees engaged on Public Works on or at the building, from May 1, 1930, until April 30, 1931, or until such time as another order may be made by the Minister of Public Works.

The previous schedule for Winnipeg, effective from May 1, 1929, to April 30, 1930, was given in the LABOUR GAZETTE, August, 1929, page 934. The schedule for the province, exclusive of Winnipeg and district, for the corresponding period, was issued later. The rates of wages and hours of labour were the same as in the present schedule except in the following cases: unskilled labourers were on 54 hours per week in 1929, whereas in 1930 no hours are specified, and no special provisions were made for labourers on buildings in 1929; for mosaic and tile setters' helpers wages were 55 cents per hour, 50 hours per week, in 1929; the provisions for electrical workers in 1929 included journeymen working under permit at 77½ cents per hour, 44 hours per week; experienced helpers 65 cents per hour, 44 hours per week, and helpers 45 cents per hour, 44 hours per week. There was also no special provision for carpenters on hydro electric developments in 1929.

†District represents a radius of thirty miles from City of Winnipeg.

*Subject to agreements between respective craft unions and contractors' organizations. (ED. LABOUR GAZETTE)

‡All men governed by Winnipeg agreements hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule, excepting where other agreements for specified work are in effect.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Printing and Publishing

HALIFAX, N.S.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 130.

Verbal agreement to be in effect from January 1, 1930, to December 31, 1930, and thereafter until 60 days' notice of change is given by either party.

Only union members to be employed, if available.

Hours: 8 per day, 6 days per week for both day and night work.

Overtime: time and one-half; Sundays and holidays, double time except in the case of regular night shifts beginning on or extending into Sunday or a holiday.

Wages per week for hand compositors, make-ups, machine operators and journeymen not otherwise specified $35 for day work and $38 for night work. Foremen to receive at least $3 per week over the regular wage and machinists and machinist operators at least $2 extra.

Apprentices must be at least 16 years of age and shall serve an apprenticeship of five years. One apprentice allowed to every three journeymen members of the union, but not more than four apprentices in one office. Apprentices will be examined yearly before the local committee on apprentices before being given increased wages. They must also complete the course in printing given by the international union.

Wages for apprentices: at least two-fifths of journeymen's wages for third year, one-half for fourth year and two-thirds for fifth year.

The union reserves the right to refuse to execute work received from or destined for struck offices or unfair composing rooms.

A standing committee consisting of two representatives of each party to be appointed and all disputes will be referred to it. If unable to agree, a board of arbitration will be formed consisting of two representatives of each party and a fifth chosen by them, the decision of which board will be final and binding.

HALIFAX, N.S.—TWO NEWSPAPER PUBLISHING COMPANIES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 330.

Agreement to be in effect from May 30, 1930 to May 30, 1931, and for such time thereafter not exceeding 30 days as may be required to negotiate a new agreement. If unable to reach a new agreement, the matter will be referred to an arbitration board consisting of two members of each party and a fifth chosen by them or by a judge of the Superior Court of Nova Scotia and work shall proceed without interruption pending such negotiations or arbitration as provided in the arbitration contract between the International Printing Pressmen and Assistants' Union and the American Newspaper Publishers' Association.

Only union members to be employed, if available.

Hours: 8 per day or night, a 48-hour week.

Overtime: time and one-half; Sundays and holidays, double time.

Wages: union members with at least five years experience to receive an increase of $2 per week; members with over one year and less than five years' experience to receive an increase of $1 per week.

Apprentices must be at least 16 years of age and must serve five years. They will be examined every six months as to their competency and progress.

Wages for apprentices: $12 per week for first year, with an increase of $1 per week every six months to $20 per week for second half of fifth year.

A standing committee consisting of two representatives of each party shall be formed. All disputes will be referred to this committee, but if they are unable to agree, the matter will be referred to an arbitration board in the same way as provided above for the making of a new agreement.

HALIFAX, N.S.—TWO JOB PRINTING OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 330.

This agreement was signed following a dispute at one office which is reported on page.. of this issue.

Agreement to be in effect from May 23, 1930, to May 23, 1931.

Only union members to be employed, if available.

Hours: 8 per day, a 44-hour week.

Overtime: time and one-half; Sundays and holidays, double time.

Wages per week: journeymen—cylinder press, $30, journeymen—feeding his own press, $32, journeymen on pony press, $25, journeymen on pony press feeding, $27, journeymen in charge of platen presses. $30, assistant journeymen on platen presses, $25, platen assistant (feeder) automatic or hand, $18. Foremen to receive at least $3 above cylinder press scale.

Apprentices to be governed by rules and regulations made by the parties to the agreement and will be examined quarterly as provided by the laws of the International Union.

Wages per week for apprentices: first twelve months at the discretion of the office; cylinder press apprentices from $10 during second year

to $25 during sixth year; platen press apprentices from $8 during second year to $18 during last year. All apprentices to serve 90 days' probation in charge of a press at sixth year scale before receiving journeymen's scale.

The union agrees to furnish employers with the union label.

In case of a dispute, the matter will be referred to a board of conciliation consisting of two representatives of each party. If they are unable to agree, a fifth member will be chosen by them or by a judge of the Superior Court of Nova Scotia, the decision of this board to be final.

TORONTO, ONTARIO.—PUBLISHERS OF THREE DAILY NEWSPAPERS AND THE MAILERS' UNION NO. 5 (INTERNATIONAL TYPOGRAPHICAL UNION).

Agreement to be in effect from June 1, 1929, to May 31, 1931. If a new agreement is not reached at the expiration of this one, it shall be referred to arbitration as provided for in the arbitration contract which existed between the American Newspaper Publishers' Association and the International Typographical Union from 1917 to 1922.

Hours: 8 per day for day work and 7 per night for night work.

Overtime: time and one-half; Sundays and holidays, double time.

Wages per week for journeymen mailers: from June 1, 1929, to May 31, 1930, $40 for day work and $40.50 for night work; from June 1, 1930, to May 31, 1931, $41 for day work and $41.50 for night work.

Extra men to be paid time and one-half for hour work with a minimum of four hours, but shall not receive more than a regular day's pay for a day's work.

Wages per week for apprentices: from $17 for first half of third year to $27 for second half of fifth year.

The union reserves the right to refuse to execute work received from or destined for an office where a strike exists.

All disputes will be referred to local arbitration as provided in the international arbitration contract mentioned above, the decision of such arbitration board to be final.

Construction: Buildings and Structures

HALIFAX, N.S.—MASTER PLUMBERS, MEMBERS OF THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 56.

Agreement to be in effect from May 15, 1930, to April 30, 1932, and from year to year until notice is given 90 days before April 30, of any year. When such notice is given the joint committee will meet within 30 days.

Only union members to be employed, if available; if none available any others employed must join the union within 30 days. Union members will not work for anyone but a legitimate plumbing and heating contractor. This does not apply to work being done for the municipal, provincial or federal governments.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to 10 p.m.; after 10 p.m. and all work on Sundays and holidays, double time. No work on Labour Day.

Wages per hour for certified plumbers: from May 15, 1930, to April 30, 1931, 90 cents; from May 1, 1931, to April 30, 1932, $1.

One apprentice allowed for every three journeymen employed. Apprentices will serve five years and in one shop unless otherwise agreed on. At the end of five years, apprentices must pass a satisfactory examination before being classified as a journeyman. Not more than one apprentice or helper will be allowed to any journeyman.

The members of one branch of the trade shall be prohibited from working at that of another while any of the men of that trade are out of employment, except in case of emergency.

For work out of the city, fare, board and travelling time to 5 p.m. to be paid by employers.

Any grievance or dispute will be referred to a joint conference board consisting of three representatives of each party, who shall have power to settle disputes and appoint an arbitrator, if necessary. If unable to settle a dispute, or if the union violates the agreement, the matter will be referred to the General Office of the United Association who shall investigate and render a decision before any strike or lockout occurs.

TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF HEAT AND FROST INSULATORS AND ASBESTOS WORKERS, LOCAL NO. 20.

Agreement to be in effect from January 1, 1930, to December 31, 1930.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE for February, 1929, and July, 1928. The rate of wages for journeymen remains at $1 per hour.

REGINA, SASKATCHEWAN.—ELECTRICAL CONTRACTORS' SECTION OF THE REGINA BUILDERS' EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 572.

Agreement to be in effect from January 1, 1930, to December 31, 1930. Both parties agree to meet during December to formulate a new agreement.

Only union members to be employed and no member shall work for any contractor who is not a party to the agreement. No union member will be allowed to take any contracts.

Hours: 9 per day, 4 on Saturdays, a 49-hour week. In case of shift work, work to be divided into three 8-hour shifts with 20 minutes off for meal, a 48-hour week.

Overtime: time and one-half to 10 p.m. and to 6 p.m. on Saturdays; all other overtime and work on legal holidays, double time. No work on Labour Day.

Wages for journeymen wiremen: $1.10 per hour. Journeymen having charge of jobs of

which the electrical contract is estimated at $10,000 or more, shall receive 10 cents over journeyman's rate.

Not more than one apprentice to one journeyman. An apprentice is one with less than four years' experience at the trade. After four years' apprenticeship, men to be rated as journeymen.

Wages for apprentices: first year at discretion of employer, second year 35 to 50 cents per hour, third year 60 to 75 cents per hour, fourth year 75 cents to journeymen's rate.

For work out of the city, fare and travelling time to be paid and board for the first two weeks on out-of-town jobs.

A joint conference board consisting of three contractors and three journeymen shall be established and shall have power to make recommendations for improving the general conditions of the trade, and any dispute will be referred to this committee whose decision shall be binding.

VANCOUVER, B.C.—THE GENERAL CONTRACTORS' ASSOCIATION AND THE AMALGAMATED CARPENTERS OF CANADA, VANCOUVER DISTRICT MANAGING COMMITTEE.

Agreement to be in effect from April 30, 1930, to April 1, 1931, and from year to year until notice is given 90 days before April 1, of any year. When such notice is given, the parties will meet and come to a decision in the same way as provided for the settlement of disputes described below.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. If two shifts are worked, the first will be 8 hours and the second 7½ hours for eight hours' pay. If three shifts are worked, all three will be 7½ hours with eight hours' pay.

Overtime: time and one-half for first four hours; after four hours and all work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen carpenters: $1 per hour.

Any dispute which representatives of both parties are unable to settle will be referred to a board of conciliation consisting of three representatives of each party whose decision will be binding. If this board is unable to agree, each party will appoint a representative to investigate the trouble and the decision they come to will be binding.

VANCOUVER, B.C.—CERTAIN CONTRACTORS AND THE GRANITE CUTTERS' INTERNATIONAL ASSOCIATION.

The agreement which came into effect April 1, 1929, and was summarized in the LABOUR GAZETTE, August, 1929, page 927, has been renewed without change to April 1, 1931.

VANCOUVER, B.C.—CERTAIN CUT STONE CONTRACTORS AND THE JOURNEYMEN STONE CUTTERS' ASSOCIATION.

Agreement to be in effect from December 12, 1929, to December 12, 1930. Three months' notice must be given by either party desiring a change.

Hours: 8 per day, a 5-day week. No work on Saturdays or Sundays.

Wages for stone cutters: $10 per day. Any stone cutter sent out to a job to receive 50 cents per day extra. Carvers to receive at least $2 per day extra.

Journeymen stone cutters to control cutting of Haddington Island and all other sandstone. Planers, lathes and carborundum saws to be operated by practical stone cutters.

Transportation and Public Utilities: Water Transportation

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from May 15, 1930, to December 31, 1930.

This agreement is the same as the one which was in effect in 1928 and 1929, which was mentioned in the LABOUR GAZETTE, May, 1929, and May, 1928, the main clauses having already been summarized in the issues of June and October, 1927.

MONTREAL, QUEBEC.—VARIOUS SHIPPING COMPANIES AND THE INDEPENDENT ASSOCIATION OF CARPENTERS AND SHIPLINERS OF THE PORT OF MONTREAL.

This agreement which came into effect April 1, 1929, and was mentioned in the LABOUR GAZETTE, May, 1929, and May, 1928, the main clauses having already been summarized in the issue of June, 1927, has been renewed to April 1, 1931.

Statistics were issued this month by the Canadian Wheat Pool showing the number and capacity of wheat pool elevators in Canada under co-operative control. In 1929 there were 1,636 country elevators with a combined capacity of 57,550,000 bushels. Besides these the terminal elevators at Port Arthur, Fort William, St. Boniface, Vancouver and Prince Rupert had a capacity of 38,426,250 bushels. Of the 1,636 country elevators, 156 were in Manitoba, 1,042 in Saskatchewan and 439 in Alberta. In 1925 the total number of country elevators was only 100, with a capacity of 3,080,000 bushels. The Pacific Coast elevators, having a capacity of 8,050,000 bushels, are used by the Alberta unit.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again toward somewhat lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.17 at the beginning of May, as compared with $11.24 for April; $10.94 for May, 1929; $10.80 for May, 1928; $10.76 for May, 1927; $11.29 for May, 1926; $10.48 for May, 1925; $9.89 for May, 1924; $10.36 for May, 1923; $10.22 for May, 1922; $12.25 for May, 1921; $16.65 for May, 1920; $12.66 for May, 1918; and $7.42 for May, 1914. Seasonal declines occurred in the prices of eggs, milk and butter, while the prices of veal, prunes, sugar, tea and coffee were also slightly lower. The prices of beef, mutton and potatoes were higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.49 at the beginning of May, as compared with $21.53 for April; $21.21 for May, 1929; $21.04 for May, 1928; $20.95 for May, 1927; $21.54 for May, 1926; $20.72 for May, 1925; $20.24 for May, 1924; $20.90 for May, 1923; $20.57 for May, 1922; $22.84 for May, 1921; $26.44 for May, 1920; and $14.21 for May, 1914. Fuel was slightly lower, due to decreases in the price of coal. Rent was slightly higher in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 89·9 for May, as compared with 91·7 for April; 92·4 for May, 1929; 97·9 for May, 1928; 98·3 for May, 1927; and 100·2 for May, 1926. One hundred and thirty-two prices quotations declined, thirty-four advanced and three hundred and thirty-six were unchanged.

In the grouping according to chief component materials all of the eight main groups were lower, the Vegetables and Vegetable Products group, due mainly to lower prices for grains, sugar, coffee and raw rubber; the Animals and their Products group, because of lower quotations for milk, butter and lumber, which more than offset advances in the prices of eggs and live stock; the Fibres, Textiles and Textile Products group, because of lower prices for raw silk, silk fabrics and hessian; the Wood, Wood Products and Paper group, due to declines in the prices of certain lines of lumber; the Iron and its Products group, due mainly to lower prices for scrap iron, galvanized steel sheets and automobile body plates; the Non-Ferrous Metals and their Products group, because of further declines in the prices of copper, silver, tin and zinc; the Non-Metallic Minerals and their Products group, due to seasonal declines in the prices of coal; and the Chemicals and Allied Products group, due to lower prices for dyeing and tanning materials, paint materials and drugs.

In the grouping according to purpose lower prices for tea, sugar, milk, pottery, coal and silk fabrics caused a decline in consumers' goods. Producers' goods were also lower, due to decreases in the prices for building materials and for materials for the textile and clothing industries, for the fur and leather goods industries, for the metal working industries, for the chemical using industries, for the milling and other industries, as well as for miscellaneous producers' materials. Materials for the meat packing industries were higher.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were lower, the former due to declines in the prices of silk, raw sugar, grains, rubber, tin, silver and copper, which more than offset increases in the prices of live stock and eggs, and the latter because of lower prices for butter, cheese, copper sheets, pottery, wrapping paper and copper sulphate. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each.

The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86·3; 1917, 84·6; 1918, 82·9; 1919, 81·6; 1920, 81·1;

(Continued on Page 726)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

*Prior to 1926 number of commodities was 236.

(Continued from Page 718)

1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5; 1925, 73·8; 1926, 73·2; 1927, 70·9 1928, 69·3; 1929, 67·3; 1930, 65·5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73·8; 1924, 72·2; 1925, 69·9; 1926, 68·7; 1927, 68·2; 1928, 67·1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98·3; 1915, 98·1; 1916, 96·3; 1917, 100·7; 1918, 107·4; 1919, 111·1; 1920, 125·4; 1921, 143·6; 1922, 140·6; 1923, 135·7; 1924, 134·6; 1925, 131·6; 1926, 131·1; 1927, 129·4; 1928, 127·8. Natural gas 1913, 100; 1914, 107·0; 1915, 112·5; 1916, 112·5; 1917, 113·9; 1918, 114·0; 1919, 116·1; 1920, 125·1; 1921, 137·6; 1922, 163·2; 1923, 163·0; 1924, 162·2; 1925, 179·3; 1926, 172·4; 1927, 165·9; 1928, 158·6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906, 107·5; 1907, 108·8; 1908, 106·9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106·6; 1913, 100·0.

CHANGES IN THE COST OF LIVING IN CANADA

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18¾%; Clothing 18¾%; Sundries 20%. †Revised.

Retail Prices

Beef prices continued toward higher levels, sirloin steak being up from an average of 36·6 cents per pound in April to 37·3 cents in May; round steak from 31·8 cents per pound in April to 33·3 cents in May; rib roast from 29·4 cents per pound in April to 30·5 cents in May; and shoulder roast from 23·4 cents per pound in April to 24 cents in May. Increases occurred in most localities. Veal was slightly lower at an average price of 24·4 cents per pound in May, as compared with 24·9 cents in April. Mutton advanced from an average price of 31·8 cents per pound in April to 32·3 cents in May.

The seasonal decline in the price of eggs continued, fresh being down from an average of 36·9 cents per dozen in April to 35·1 cents in May and cooking from 32·5 cents per dozen in April to 31·1 cents in May. Lower prices were reported from most localities. Milk was down in the average from 12·8 cents per quart to 12·4 cents, lower prices being reported from Sherbrooke, St. Hyacinthe, Thetford Mines, Montreal, Brockville, Kingston, Belleville, Peterborough, Stratford, St. Thomas, Windsor, North Bay, Cobalt, Winnipeg and Lethbridge. Both dairy and creamery butter showed a general decline, the former from an average of 39·4 cents per pound in April to 36·6 cents in May and the latter from 43·2 cents per pound in April to 40·1 cents in May. Cheese was unchanged at an average price of 32·9 cents per pound.

Bread was unchanged at an average price of 7·7 cents per pound. Beans were slightly lower at an average price of 9·3 cents per pound, as compared with 9·5 cents in April. Potatoes were up from an average price of $2.38 per ninety pounds in April to $2.66 in May. Increases were reported from most localities. Prunes were slightly lower in the average at 16 3 cents per pound. Declines in the prices of both granulated and yellow sugar were general, the former being down from an average price of 7·1 cents per pound in April to 6·9 cents in May and the latter from 6·8 cents per pound in April to 6·6 cents in May. Coffee declined from 58·7 cents per pound in April to 57·9 cents in May. Tea was down in the average from 67·8 cents per pound in April to 65·8 cents in May. Anthracite coal was down in the average from $16.22 per ton in April to $16.09 in May. Decreases were reported from Sherbrooke, Sorel, Orillia, Toronto, Niagara Falls, Brantford, Galt, Guelph, Kitchener, Stratford and London. Coke declined from an average price of $12.87

per ton in April to $12.68 in May. Increases in rent were reported from Sherbrooke and Guelph.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices declined slightly, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged $1.08 per bushel, as compared with $1·098 in April. Coarse grains, for the most part, were lower, western barley being down from 48·8 cents per bushel to 44·9 cents; American corn from 98·3 cents per bushel to 92·9 cents; western oats from 53·8 cents per bushel to 49·9 cents; rye from 66·3 cents per bushel to 62 cents; and flax from $2.43 per bushel to $2.19. The price of flour again declined, being down from $7.90 per barrel to $7.72. Rolled oats at Toronto was down from $3.40 per ninety-pound bag to $3.30. Bran and shorts also were lower, the former being down from $32.85 per ton to $32.40 and the latter from $34.05 per ton to $33.81. Raw sugar at New York was down from $1·625 per hundred to $1·438. The decline was said to be due to uncertainty regarding the United States tariff and to the arrival of supplies from the Philippines. Granulated at Montreal was down from $4.84 per 100 pounds to $4.66. Ceylon rubber was again slightly lower at 14·6 cents per pound, as compared with 14·9 cents. Ceylon and India tea were approximately 5 cents per pound lower in May following the removal of the duty on all British tea in the 1930 budget. Raw linseed oil declined from $1.17 per gallon to $1.04-$1.12. Choice steers at Toronto advanced from $10.32 per hundred pounds to $10.51 and at Winnipeg from $9.21 per hundred pounds to $10.55. Lambs also advanced substantially, the price at Toronto being up from $11.42 per hundred pounds to $14.63 and at Winnipeg from $9.86 per hundred pounds to $11.78. Hog prices were generally lower, being down at Toronto from $13 per hundred pounds to $12.13, at Montreal from $13.14 per hundred pounds to $12.47 and at Winnipeg from $11.51 per hundred pounds to $11.15. In hides, calf skins advanced from 13·5-14 cents per pound to 14-14·5 cents, while beef hides were down from 9-9·5 cents per pound to 8·5-9 cents. Creamery butter at Montreal was down from 34·9 cents per pound to 33·07 cents and at Toronto from 35·6 cents per pound to 33·73 cents. Fresh eggs at Montreal advanced from 34 cents per dozen to 36 cents. Raw cotton at New York showed little change at an average price of 16·43 cents per pound. Raw silk declined from $4.85 per pound to $4.55. In lumber, hemlock was down from $26 per thousand feet to $25 and British Columbia fir from $32 per thousand feet to $28. Scrap iron declined $3.50 per ton to $14.50 and cast iron $3 per ton to $10. In non-ferrous metals copper declined from $17.65 per cwt. to $14.84; lead from $5.65 per cwt. to $5.33; tin from 41¼ cents per pound to 34¾ cents; and silver from 42·445 cents per ounce to 40·745 cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for April.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924 = 100, was 74·4 for April, a decline of 0·7 per cent from March and a decline of 10·8 per cent from the level of April, 1929. It is the lowest index number recorded for any month since the present index number was started in 1920. The rate of decline, however, is the lowest since November, 1929. As compared with March, food was 0.1 per cent lower, decreases in meat and fish being nearly counteracted by an advance of 2·7 per cent in cereals. Among industrial materials, all sub-groups declined with the exception of a slight rise in cotton. The most marked fall was in coal which amounted to 4·1 per cent.

The *Economist* index number on the base 1927 = 100, was 81·6 at the end of April, a decline of 1·8 per cent in the month. Prices are now 13 per cent lower than at the end of April, 1929. As compared with March, the cereals and meat group was 0·2 per cent higher owing to increased prices of cereals, although beef and mutton declined sharply. Minerals were 4·7 per cent lower than at the end of March owing to a substantial fall in copper and other non-ferrous minerals.

The other groups namely "other foods," textiles and miscellaneous commodities were also lower.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877 = 100, was 101·5 at the end of April, a fall of 1·5 per cent for the month. The most notable decrease in the month was a fall of 5·6 per cent in minerals due to much lower prices for copper, tin and lead, although coal was slightly higher. All three sections of the food group were higher at the end of April. Textiles and sundries were both lower.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914 = 100, was 155 at May 1, a fall of two points from April 1. The food group was lower due chiefly to lower prices for milk and butter. Fuel and light were also lower than in the previous month.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics on the base 1913 = 100, was 135 for April, as compared with 136 for March and 140 for February. The principal change from March prices was a substantial decline in animal foods. Other groups showed very little variation.

France

WHOLESALE PRICES.—The index number of the General Statistical Office on the base July, 1914 = 100, was 560 for April, as compared with 565 for March. Vegetable foods and textiles were slightly higher than in March, but all other groups declined.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office on the base 1913 = 100, was 126·7 for April, an advance of 0·2 per cent over the March level. This was due to substantial increases in the prices of foods of vegetable origin and of fodder and to smaller increases in provisions and textiles. The most notable declines were in foods of animal origin, non-ferrous metals and rubber. The other groups varied only slightly from the previous month.

COST OF LIVING.—The official index number of the cost of living on the base 1913-1914 = 100, was 147·4 for April, a decline of 0·9 per cent from March. Food, heat and light and clothing were lower, while rent and sundries were slightly higher.

British India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914 = 100, was 137 for March, showing no change from February. An advance of four points in food was counteracted by declines in oil seeds, raw cotton, hides and skins, metals and miscellaneous manufactured articles.

COST OF LIVING.—The index number of the working class cost of living on the base July, 1914 = 100, was 141 for April, a decline of one point from March, which was due to a decline in food, partly counteracted by a slight advance in clothing.

United States

WHOLESALE PRICES.—The *Annalist* index number on the base 1913 = 100, was 132·1 for May, a decline of 1·1 per cent from April. Every group was lower in May except fuels which advanced 1·5 per cent.

Bradstreet's index number showing the cost of a list of 106 commodities was $10·7741 at June 1, which is a decline of 1·5 per cent from May 1, and of 13·4 per cent from June 1, 1929. Compared with May 1, the prices of breadstuffs, live stock and fruits advanced slightly, while all the other groups declined with the exception of chemicals which were unchanged.

COST OF LIVING.—The index number of the National Industrial Conference Board on the base July, 1914 = 100, was 157·5 for April, as compared with 157·4 for March. Housing, clothing, fuel and light declined, while food was higher; sundries were unchanged.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Scope of British Columbia Male Minimum Wage Act

Reference is made on another page of this issue to the decision of the British Columbia Court of Appeal, allowing an appeal from the recent refusal of Mr. Justice Murphy, to issue a writ of *mandamus* requiring the Minimum Wage Board to hold an enquiry under the Male Minimum Wage Act, 1929, into the circumstances surrounding the employment of, and the wages paid to, licentiates of pharmacy employed in drug stores. Mr. Justice Murphy's decision upholding the Board's refusal to hold such an inquiry, on the ground that pharmacists are a "profession" and not an "occupation," was outlined in the LABOUR GAZETTE, November, 1929, page 1317. The Court of Appeal held, on the contrary, that the Act applies to all occupations in the industries within its scope, excepting only those occupations that are not expressly exempted. These exceptions do not include the occupation of pharmacists.

Chief Justice Macdonald, in giving judgment said:—

"The neat question is as to whether or not licentiate pharmacists who are employed by pharmacists or druggists, come within the provisions of the Male Minimum Wage Act, 1929, ch. 43. The Male Minimum Wage Board were petitioned under the Act to fix a minimum wage for such employees; the Board held that such did not come within the provisions of the Act, and declined to entertain the petition. This action is to compel the Board by mandatory order to do so. On appeal to a Judge the action of the Board was affirmed, the learned Judge thinking that this class of employees were professional men and not within the intent of the Act. Petitioners now appeal on the question of law involved. I think they are right. The Act enables the petition to be presented by at least 10 employees complaining that their remuneration in their said occupation is insufficient. The Board is authorized by the Act on a properly presented petition to make an order fixing a minimum wage to be paid by the employer in the occupations covered by the statute. It was not argued that the Board had discretion in a proper case to refuse to adjudicate. It was argued that the appellant's occupation does not come within that word as used in the statute. It is a word of very broad meaning, and is not, I think, a technical one, but must be given its natural and popular meaning. In popular language, in reply to the question, 'What is your occupation?' it, I think, may be answered with propriety—'Barrister, medical doctor or pharmacist,' or any other designation applicable to the calling of the interrogated person, which he follows.

"There is nothing to be found in the Act to indicate that the word 'occupations' is not broad enough to include that of pharmacist. The word 'employer' is defined in the Act, to include every person, etc., having control or direction of, or responsible directly or indirectly for, the wages of any employee; and 'employee' is defined to be any adult male person who is in receipt or entitled to any compensation for labour or services in any occupation to which this Act applies. These definitions answer the contention that the statute applies only to manual labour. It includes any occupation, and the term 'wages' is defined to include any compensation for labour or services.

"The governing intention of the Act is to assist those serving for remuneration. It is a remedial Act and should receive that wide and liberal interpretation which the Interpretation Act, R.S.B.C., 1924, ch. 1, declares such Acts ought to receive. But apart from this, the Legislature has indicated the scope of the Act by providing exceptions to it. Sec. 17 provides a number of exceptions. The Legislature therefore had in their minds those who should and those who should not be within its scope, and I think they used the word 'occupations' in its widest sense.

"I would allow the appeal, and direct the issue of a mandatory order to the Board to hear and determine the question raised in the petition."

Mr. Justice Martin and Mr. Justice Galliher concurred in allowing the appeal, giving separate reasons for judgment.

Fines for Faulty Work Unlawful in England

The Chancery Division of the Court of Appeal (England and Wales) recently declared that the old-established practice of fining weavers for faulty work is unlawful. The decision was rendered in a test case in which a weaver objected to the deduction of one shilling from his wages. His argument, supported by workers' organizations, was that the employers should not be judge and jury in their own case, with the right to assess their own damages. The defendants, his

employers, contended that the standard rate of wages was paid for standard work, and the employer was therefore entitled to make deductions in respect of cloth spoiled by the weavers.

Mr. Justice Farwell, in giving judgment in the case, upheld the plaintiffs claim that the defendants acted contrary to section 3 of the Truck Act of 1831 in deducting one shilling from the plaintiff's weekly wages for faulty weaving. He also decided that although there undoubtedly was a long-established custom in the industry to make deductions from employees' wages for bad work, it was not one that the law could recognize. Although the actual amount involved, he said, was very small, the questions to be decided in the action were of great importance, and raised consideration of an alleged usage in the cotton weaving trade in Lancashire whereby the employers claimed to be entitled to make deductions from the wages of their operatives for bad work.

With regard to the alleged usage he found the facts were as follows: It was clear that the practice had been in existence for a very long time and was widely known to persons connected with the trade, while until recently the legality of that practice had not been challenged. On the other hand, the practice did not obtain in all the mills in Lancashire, the evidence being that in some 15 per cent of the mills there was no such practice, while in others it had been suspended to see whether it could be got rid of. Further, the system that obtained at the defendants' mill and was the most usual system, was not that which obtained at all the mills where there was fining. It was said that the fine could never exceed the loss the employer suffered, and His Lordship had little doubt that in every case the fine was less than the actual loss. However, the fine was fixed before it was possible to ascertain precisely what the actual loss was, and therefore it was difficult to say how the amount of the fine could have any real relation to the actual loss suffered, one of the witnesses for the defence, in fact, saying that the fine was really imposed as a penalty on the weaver for his carelessness and to impress upon him the need of taking more care in the future.

The judge stated that in his judgment the fine was not imposed, primarily at any rate, for the purpose of making good any loss suffered by the weaver's carelessness. Could such a practice be a usage which the law recognized? It was said that a practice which had obtained for so long unchallenged must be a good usage. Although due weight must be given to that argument it was not conclusive. In his view this was a usage which the law had not recognized, and it was one which, being dependent upon the will of the master, was not reasonable or certain. It was said that the matter did not depend entirely upon the will of the master, because it was open to the weaver, if he objected to the deduction, to take steps to recover it. But the usage which left it at the will of the master to decide whether there should be a deduction or not was none the less objectionable because it might not be impossible in a court of law for the operative to get a decision that the case was not one for a fine at all. Even if he had been able to come to the conclusion that the practice was otherwise unobjectionable, the deduction would be illegal under the Truck Act. Once, however, he had decided that the usage was not one that the law would recognize then, apart from the Truck Act, there could be no justification for the deduction.

In the circumstances he held that the plaintiff was entitled to the declaration he claimed, and he ordered the defendants to pay him the sum of one shilling and also to pay the costs of the action.

—*Sagar versus H. Ridehalgh and Son, Limited.*

United States Railway Workers' Right to Choose Union

The United States Supreme Court, in a unanimous decision rendered on May 26, sustained the contentions of the Brotherhood of Railway Clerks in their action against the Southern Pacific Lines in Texas and Louisiana, the point at issue in the case being the railway company's refusal to observe the provisions of the United States Railway Labour Act to the effect that both the railroads and their employees should be permitted to select their representatives without "coercion and influence." The company, on the contrary, had constrained their employees to become members of a "company union," exercising restraint on their freedom to join a union of their own choice.

The decision does not directly affect Canadian labour, but an account of the case will be read with interest in view of the importance of the question involved. The decision upheld the injunction issued against the company's action by Federal Judge Hutcheson, of Houston, Texas, and sustained in subsequent judgments by the Federal District Court of Texas and the Federal Court of Appeals, sitting at New Orleans.

Chief Justice Charles Evans Hughes read the judgment of the Supreme Court. He pointed out that the suit was brought in the Federal District Court in Texas by the Brotherhood of Railway Clerks, through its general chairman, H. W. Harper, and was directed against the Texas and New Orleans Railroad Company (the Southern Pacific Lines in Texas and Louisiana).

An injunction was asked restraining the company from "interfering with, influencing or coercing" the clerical employees of the carrier in the matter of their organization and the designation of representatives for the purpose of carrying on negotiations affecting wages and working conditions.

The Brotherhood asked Federal District Judge Hutcheson to compel the carrier to respect the following paragraph of the Railway Labour Act of 1926:

"Third. Representatives, for the purposes of this act, shall be designated by the respective parties in such manner as may be provided in their corporate organization or unincorporated association, or by other means of collective action, without interference, influence, or coercion exercised by either party over the self-organization or designation of representatives by the other."

"The controversy," continued the Chief Justice, "is with respect to the construction, validity and application of this statutory provision."

He said the railroad company in defending its conduct contended:

(1) That the section of the Railway Labour Act referred to was "merely an abstract right" which Congress had never intended should be enforced by legal proceedings.

(2) That in so far as the Railway Labour Act undertook to prevent either party from influencing the other in the selection of representatives it was unconstitutional, because it sought "to take away an inherent and inalienable right in violation of the first and fifth amendments of the Federal Constitution."

The company's attorneys emphasized that point in the most hard-boiled fashioned in their brief. They contended that the Southern Pacific had a "constitutional right" to coerce its employees. Justice Hughes' decision knocks that contention into a cocked hat.

(3) That the granting of the injunction was a violation of section 20 of the Clayton Act, which prohibits the issuance of injunctions in industrial disputes.

(4) And that in any event the carrier had a right to organize its company union and that there was no warrant in law for the court's interfering.

So far as the questions of fact were concerned, the Chief Justice pointed out that the Federal District Court and the Federal Court of Appeals were in agreement as to the company's conduct. Therefore, he said, the Supreme Court would accept the findings "in which two courts concur."

"A strong motive existed on the part of the railroad company to oppose the demands of the Brotherhood," said the Chief Justice, "and to promote another organization of the clerical employees which would be more favourable to the interests and the contentions of the company.

"Both courts found the explanation of the company's attitude in the letter addressed by H. M. Lull, executive vice-president of the railroad company, to A. D. McDonald, its president, under date of May 24, 1927, shortly before the activities of which complaint was made in this suit.

"In this letter, Mr. Lull referred to the pendency before the United States Board of Mediation of the demand of the Brotherhood for an increase of wages for the clerical employees, and it was stated that if the matter went to arbitration, and the award was made on the same basis as one which had recently been made with respect to the lines west of El Paso, it would mean an increased pay-roll cost of approximately $340,000 per annum. Mr. Lull said:

"'It is our intention, when handling the matter in mediation proceedings, to raise the question of the right of this organization (the Brotherhood) to represent these employees and if arbitration is proposed we shall decline to arbitrate on the basis that the petitioner does not represent the majority of the employees.

"'This will permit us to get away from the interference of this organization, and if successful in this, I am satisfied we can make settlement with our own employees at a cost not to exceed $75,000 per annum.'

"Motive is a persuasive interpreter of equivocal conduct, and the petitioners (the railroad) are not entitled to complain because their activities were viewed in the light of manifest interest and purpose.

"The circumstances of the soliciting of authorizations and memberships on behalf of the association, the fact that employees of the railroad company who were active in promoting the development of the association were permitted to devote their time to that enterprise without deduction from their pay, the charge to the railroad company of expenses incurred in recruiting members of the association, the reports made to the railroad company of the progress of these efforts, and the discharge from the service of the railroad

company of leading representatives of the Brotherhood and the cancellation of their passes, gave support, despite the attempted justification of these proceedings, to the conclusion of the courts below that the railroad company and its officers were actually engaged in promoting the organization of the association in the interest of the company and in opposition to the Brotherhood, and that these activities constituted an actual interference with the liberty of the clerical employes in the selection of their representatives."

Chief Justice Hughes went back to the Transportation Act of 1920—the Esch-Cummins law—and pointed out that the old Railroad Labour Board had failed largely because there was nothing in the law which enabled it to enforce its awards.

This failure of the Railroad Labour Board, the Chief Justice continued, revealed "the infirmity" of the existing legislation and led to the passage of the Railway Labour Act in 1926.

He emphasized that the enactment of the Railway Labour Act had been urged on Congress by both the carriers and the unions.

Congress definitely decided, he said, to make a fresh start.

"While adhering to the policy of providing for the amicable adjustment of labour disputes, *and for voluntary submissions to arbitration as opposed to a system of compulsory arbitration,* Congress buttressed this policy by creating certain legal obligations."

The outstanding feature of the new law, according to the Chief Justice, was "the provision for an enforceable award in arbitration proceedings."

"The arbitration is voluntary, but the award is conclusive," he emphasized.

"It is thus apparent that Congress, in the legislation of 1926, while elaborating a plan for amicable adjustments and voluntary arbitration of disputes between common carriers and their employees, thought it necessary to impose, and did impose, certain definite obligations enforceable by judicial proceedings.

"The question before us is whether a legal obligation of this sort is also to be found in the provisions of subdivision third of section 2 of the act providing that 'Representatives, for the purposes of this act, shall be designated by the respective parties . . . without interference, influence, or coercion exercised by either party over the self-organization or designation of representatives by the other.'

"It is at once to be observed that Congress was not content with the general declaration of the duty of carriers and employees to make every reasonable effort to enter into and maintain agreements concerning rates of pay, rules and working conditions, and to settle disputes with all expedition in conference between authorized representatives, but added this distinct prohibition against coercive measures. This addition cannot be treated as superfluous or insignificant, or as intended to be without effect.

"The intent of Congress is clear with respect to the sort of conduct that is prohibited.

"'Interference' with freedom of action and 'coercion' refer to well understood concepts of the law. The meaning of the word 'influence' in this clause may be gathered from the context. The use of the word is not to be taken as interdicting the normal relations and innocent communications which are a part of all friendly intercourse, albeit between employer and employee.

"'Influence' in this context plainly means pressure, the use of the authority or power of either party to induce action by the other in derogation of what the statute calls 'self-organization.'

"The phrase covers the abuse of relation or opportunity so as to corrupt or override the will, and it is no more difficult to appraise conduct of this sort in connection with the selection of representatives for the purposes of this act than in relation to well-known applications of the law with respect to fraud, duress and undue influence.

"If Congress intended that the prohibition, as thus construed, should be enforced, the courts would encounter no difficulty in fulfilling its purpose, as the present suit demonstrates.

"In reaching a conclusion as to the intent of Congress, the importance of the prohibition in its relation to the plan devised by the act must have appropriate consideration.

"Freedom of choice in the selection of representatives on each side of the dispute is the essential foundation of the statutory scheme. All the proceedings looking to amicable adjustments and to agreements for arbitration of disputes, the entire policy of the act, must depend for success on the uncoerced action of each party through its own representatives to the end that agreements satisfactory to both may be reached and the peace essential to the uninterrupted service of the instrumentalities of interstate commerce may be maintained.

"There is no impairment of the voluntary character of arrangements for the adjustment of disputes in the imposition of a legal obligation not to interfere with the free choice of those who are to make such adjustments. *On the contrary, it is of the essence of a voluntary scheme, if it is to accomplish its*

purpose, that this liberty should be safeguarded.

"The definite prohibition which Congress inserted in the act cannot therefore be overridden in the view that Congress intended it to be ignored. As the prohibition was appropriate to the aim of Congress, and is capable of enforcement, the conclusion must be that enforcement was contemplated.

"The absence of penalty is not controlling. The creation of a legal right by language suitable to that end does not require for its effectiveness the imposition of statutory penalties. Many rights are enforced for which no statutory penalties are provided.

"In the case of the statute in question, there is an absence of a penalty, in the sense of specially prescribed punishment, with respect to the arbitral awards and the prohibition of change in conditions pending the investigation and report of an emergency board, but in each instance a legal obligation is created and the statutory requirements are susceptible of enforcement by proceedings appropriate to each.

"The same is true of the prohibition of interference or coercion in connection with the choice of representatives. *The right is created and the remedy exists.*

"We entertain no doubt of the constitutional authority of Congress to enact the prohibition.

"The power to regulate commerce is the power to enact 'all appropriate legislation' for its 'protection and advancement'; to adopt measures 'to promote its growth and insure its safety'; to 'foster, protect, control and restrain.'

"Exercising this authority, Congress may facilitate the amicable settlements of disputes which threaten the service of the necessary agencies of interstate transportation. In shaping its legislation to this end, Congress was entitled to take cognizance of actual conditions and to address itself to practical measures.

"The legality of collective action on the part of employees in order to safeguard their proper interests is not to be disputed.

"It has long been recognized that employees are entitled to organize for the purpose of securing the redress of grievances and to promote agreements with employers relating to rates of pay and conditions of work. Congress was not required to ignore this right of the employees but could safeguard it and seek to make their appropriate collective action an instrument of peace rather than of strife.

"*Such collective action would be a mockery if representation were made futile by interferences with freedom of choice.* Thus the prohibition by Congress of interference with the selection of representatives for the purpose of negotiation and conference between employers and employees, instead of being an invasion of the constitutional right of either, was based on the recognition of the rights of both.

"The Railway Labour Act of 1926 does not interfere with the normal exercise of the right of the carrier to select its employees or to discharge them. The statute is not aimed at this right of the employers but at the interference with the right of employees to have representatives of their own choosing.

"As the carriers subject to the act have no constitutional right to interfere with the freedom of the employees in making their selections, they cannot complain of the statute on constitutional grounds."

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] JULY, 1930 [NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE number of employees on industrial payrolls in Canada at the beginning of June showed a further gain, according to returns tabulated by the Dominion Bureau of Statistics from 7,256 firms, each employing a minimum of 15 persons, the firms being representative of all industries except agriculture, fishing, hunting and highly specialized business. These firms had 1,021,951 employees on June 1, as compared with 976,538 on May 1. The index of employment (with the average for the calendar year 1926 as the base equal to 100) stood at 116.5 on June 1, as compared with 111.4 on May 1, 1930, and with 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, on June 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of June, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 10.3, contrasted with unemployment percentages of 9.0 at the beginning of May and 4.0 per cent at the beginning of June, 1929. The June percentage was based on the returns tabulated by the Department from a total of 1,679 labour organizations covering 198,595 members.

Reports received during May in the offices of the Employment Service of Canada showed declines in the volume of business transacted, as indicated by the average daily placements effected, when a comparison was made with the records for April and also with those of the corresponding month last year.

The average cost of a weekly family budget of twenty-nine staple foods was $11.10 at the beginning of June, as compared with $11.17 for May; $10.92 for June, 1929; $10.73 for June, 1928; $10.86 for June, 1927; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 88 for June, as compared with 89.9 for May; 93.5 for June, 1929; 96.9 for June, 1928; 98.7 for June, 1927; and 100.1 for June, 1926.

The loss in working time caused by industrial disputes in June, 1930, was much less than in May, 1930, and was also less than the similar loss in June, 1929. Six disputes existed at some time during the month, involving 1,116 workers, and resulting in the loss of 3,351 working days. Corresponding figures for May were: 13 disputes, 1,824 workers, and 12,957 working days; and for June, 1929, 17 disputes, 803 workers, and 6,231 working days.

Industrial Disputes Investigation Act

The Department of Labour received in June the reports of two Boards of Conciliation and Investigation appointed to deal with disputes respectively between the Moose Jaw Electric Railway Company and its employees, and between construction employers at Saint John, New Brunswick, and their painters, decorators and paperhangers. Three new applications were received. Two of these being from groups of employees of the Winnipeg Electric Company, they were referred to the Board already appointed in connection with the dispute between that company and its motormen, conductors and busmen. The text of the reports, together with a full account of the recent proceedings under the Act, is given on page 749.

Labour Organization in Canada in 1929

The Department of Labour has just issued the nineteenth annual report on Labour Organization in Canada, containing a full account of the standing of trade unions of all types during the calendar year 1929, together with a review of the principal events of the year in which labour was directly concerned. It also includes lists of all unions and their local units, with the names of their officials, being a complete directory of trade unionism in the Dominion. A charge of 50 cents is made for this publication. A full outline of its contents will appear in the next issue of the LABOUR GAZETTE.

10067—1½

Fourteenth International Labour Conference

This issue contains a report of the 14th International Labour Conference, held at Geneva last month. Two Draft Conventions were adopted, dealing respectively with the subjects of Forced labour, and Hours of work in commerce and offices. Resolutions on various subjects were also adopted by the Conference. A proposed Draft Convention on the subject of Hours of Work in Coal Mines failed to obtain the required majority of two-thirds in its favour, the German delegation having abstained from voting. It is understood that this subject will come up again next year for first discussion under the "double discussion" procedure now followed in connection with the consideration of proposed Draft Conventions.

Convention Call of Trades and Labour Congress of Canada

The call for the 46th annual convention of the Trades and Labour Congress of Canada has been issued by the executive council. The meeting, to which all eligible bodies are urged to send delegates, is to be held in Regina, Sask., on September 8-13, 1930. The call addresses the affiliated unions, trades councils, and provincial Federations of Labour as follows:—

"If you are interested in such problems as unemployment, unemployment insurance, emigration and immigration, a forty-hour working week, coupled with a fair wage for labour and many other problems that affect your every day welfare, the place for you is at the Regina Convention. Come and make the views of those you represent known there, so that they may be presented by the Executive Officers of the Congress, at the proper time, to those who are elected to make the laws that govern us. After all, these laws, whether just or unjust, are the basis of all our rights as citizens of this Dominion. Therefore, we strongly urge each affiliated organization to do its utmost to have a full complement of delegates in attendance at Regina, in order that the Forty-sixth Convention of the Trades and Labour Congress may be an unqualified success.

"Your particular attention is directed to Section 4 of Article IV of the Constitution which provides that all resolutions or amendments to the Constitution for consideration by the convention must be forwarded in time to reach the office of the Congress twenty days prior to the opening of the convention. The last day therefore on which resolutions or amendments can be received this year is Tuesday, August 19th. Where more than one resolution is submitted each additional resolution to be forwarded on separate sheet."

Women's minimum wages in Nova Scotia

Regulations have been issued in Nova Scotia under the provisions of the Minimum Wage for Women Act, 1920, as amended. The appointment of the Minimum Wage Board was noted in the LABOUR GAZETTE, March, 1930 (page 255). The Act was passed by the Legislature in 1920, but became effective only this year. The new regulations, which took effect on June 30, govern the procedure in connection with Board meetings and provide also as follows:—"All employers of female labour shall keep records setting forth the rates of wages, actual earnings and hours of labour of those employed; and these records shall be open at all times during business hours for inspection and examination by any members or representative of the Board, and copies therefrom shall be furnished when requested by the Board.

"Applications for special minimum wage rates for handicapped employees shall be dealt with individually by the Board. The proportion of adult workers, female children and young girls in any establishment shall be fixed by the Board at the time of fixing the minimum wage rates. The minimum wage rates for part-time employees shall be fixed by the Board on the basis of the length of the work period involved. The Board may make allowances for meals and lodging furnished to employees as it may see fit.

"Witnesses and members of a wage conference shall be allowed $3 per day with travelling and living expenses if away from home.

"The Board shall prepare an Annual Report each year ending September 30, the first report to cover the period from the inception of the Act to September 30, 1931."

Organized social welfare in Canada

Child and Family Welfare was adopted as the new title of the official organ of the Canadian Council on Child and Family Welfare at the last annual meeting of the Council, held at Ottawa recently. The magazine will appear every other month of the Council year, that is, in May, July, September, November, January and March.

A paper in the issue for May, 1930, draws attention to the progress of the council movement in social work in the last twenty years. This development forms part of the co-operative movement in social work on this contin-

ent, other branches of the work being the Charity Organization Society and the Social Service Exchange.

"The council of social agencies, as it is generally known, has become the most favoured solution of this problem in urban centres large enough, and old enough, to have developed a multiplicity of social and health organizations offering services to the community. Frequently smaller cities, perhaps acting more wisely than they knew, have copied the plan found in the larger centres. The council of social agencies is a mutual association of social work for furtherance of common interests. Its method is the conference method, *plus* the survey method, *plus* general consultations of different people interested in the same thing. Its standard form of organization provides that each member agency shall act by and through duly appointed delegates, generally two in number, one of whom is the chief executive of the agency and the other a member of its board of managers. These delegates form the general working body of the council. They elect the officers, executive committee and such standing committees as may be required to carry on the administrative functions of the council. In larger communities, the membership of the council is usually grouped in several divisions for more effective work. Thus the agencies in the children's field, or the health field will be served by their respective divisions of the council."

The second Canadian Conference on Social Work, held recently at Toronto, was attended by representatives of the following national and provincial organizations:—Community Welfare Council of Ontario, Canadian Association of Child Protection Officers, Ontario Mothers' Allowances Commission, Social Service Council of Canada, Citizen Service Association of Canada, Canadian Association of Social Workers, Canadian Social Hygiene Council, Canadian National Institute for the Blind, Boys' Club Federation of Canada, and the Canadian Council on Child and Family Welfare. The subjects discussed at the conference included the following:—Types of councils of social agencies suitable to Canadian cities; the county as a unit of social organization; recruiting and training of social workers; child welfare in small communities; some deficiencies in the social equipment of rural communities as seen by an urban agency; some statistical problems in social work research; division of function in the family welfare field; relationship between children's and family case working agencies; where the public health nurse and social worker meet; the new social consciousness; rural delinquency, etc.

Electrical employees have voice in management

An arrangement whereby the workers were given a voice in the control of the industry which employed them was noted among the "Recent Industrial Agreements" in the last issue (page 715). One section of this year's agreement between the Electrical Contractors' section of the Regina Builders' Exchange and Local No. 572 of the International Brotherhood of Electrical Workers provides as follows:—

"A joint conference board consisting of three contractors and three journeymen shall be established and shall have power to make recommendations for improving the general conditions of the trade, and any dispute will be referred to this committee, whose decision shall be binding."

Most of the "Recent Industrial Agreements" that are outlined from month to month in the LABOUR GAZETTE, contain a provision for the establishment of a joint committee to settle any dispute arising in the industry concerned. The importance of such a provision was pointed out in connection with a recent dispute in the English cotton industry, in which the terms of settlement declared as follows:—"We are of opinion that the principle of arbitration in disputes at individual firms might be more frequently adopted. With that object in view, it is agreed that both sides shall at once endeavour to organize such machinery as will be effective in avoiding stoppages at individual mills, where disputes have passed through the usual procedure at present recognized and negotiations have failed."

Analysis of British unemployment

The *New Statesman* (London), for June 28, makes an analysis of unemployment in Great Britain, pointing out certain features tending to lessen in some measure the exceptional seriousness of the present situation. The writer states that the unemployed are divided roughly into three main groups. About one-third are victims of the present general world depression; another third make up "the so-called reserve army of industry, the inevitable residue of our present system of economic organization"; while the remaining third arises from a dislocation of industry that is relatively new, being "the product of causes neither temporary nor stationary, and still tending to get worse". Of the latter type of unemployment the *New Statesman* says: "It arises from a redundancy of labour, in certain of our great industries, in relation not only to the present economic demand for their goods, but even to any demand that can reasonably be expected after world

trade has revived. This unemployment was with us before the present world depression set in; and there is, unfortunately, every reason to fear that it will be with us in greater measure even when that depression has passed away. Here lies the real root of the problem; beside this the other parts of it are relatively easy and even unimportant. . . . There is no ground for supposing, unless conditions change radically, that the third of our unemployed who fall into the last of the three groups described above will ever get back to work at all, or at least that they will get back save at the end of a long period of years given over to a highly painful process of uncontrolled and planless readjustment of our industrial balance. The workers who make up this group fall, roughly, into two classes—those who have been chronically unemployed, or under-employed, for years past, and those who, belonging to trades overstocked with labour, have been intermittently employed. . . . Both classes constitute a permanent problem which it is far more important to tackle than it is to do more than relieve the immediate necessities of the temporary victims of the world slump."

However, as to the first of the types of unemployment enumerated above, namely that caused by economic conditions throughout the world, the writer considers that the British situation "is not nearly so serious as some people seem to imagine. In comparison with either Germany or the United States, we have so far got off lightly in terms of the effects of the world slump on the numbers employed in industry. Far more people have been thrown out of work by the slump in Germany and in America than in Great Britain; and this fact is the more remarkable because we have been hit simultaneously, in a higher degree than either of these countries, by the fall in the price of silver and by the disturbed political conditions in both India and China. Even if the number of the unemployed does rise this autumn beyond the two million mark, that will really be no reason for getting any more alarmed about our situation than we ought to have been before the world crisis had set in at all."

In conclusion, the writer states that "to find work for anything like a million and three-quarters of people is clearly out of the question. Why not begin with a more modest, but determined, attempt to provide employment for a fraction of a third of that number?"

Employers and union join in group insurance

Collective agreements have been concluded by the trade unions and employers' organizations in the electrical construction industry at New York and St. Louis, providing for a new form of group insurance with the co-operation of both parties. The plan provides for the insurance of all members of the local trade union during employment in any undertaking belonging to the local employers' association, and is based upon permanent agreements between the organizations. The agreements are introduced by a preamble, which states that "it is almost universally admitted that industry cannot and should not attempt to escape its responsibility and obligations to its aged and disabled workers and their dependents. Any industry that cannot take care of its own cannot justify its existence."

Both agreements provide for the payment of the entire premium by the employer, who is required to contribute a fixed amount per person employed per hour. The contributions are collected weekly from the employers in St. Louis by the trade union and in New York by a special board of trustees consisting of representatives of both parties. These intermediaries pay over the contributions so collected to the insurer, which may be any reliable insurance company, but is in fact the Union Co-operative Insurance Association, formed in 1922 by the International Brotherhood of Electrical Workers in order to provide its members with life insurance at a low price.

The benefits under both agreements consist of life insurance to the amount of $3,000, an old-age pension of $40 a month at the age of 65, and an invalidity pension of $30 a month which is deducted from the amount payable at death.

Problems of wages in building contracts

The question of the competition of outside contractors against local firms, and the effects of this competition on wages, were the subject of a letter recently addressed to a local builders' organization by Mr. J. Clark Reilly, general manager of the Canadian Construction Association. "There is, first," he stated, "the condition encountered by the subcontractor who was awarded the contract for the work nearly two years ago. The building was delayed for a year, and in the meantime the wages had been increased 13 per cent. Now, this is one instance of inequalities and injustice in our way of doing business which it has seemed to me for a long time ought to be adjusted. Our men, both

general contractors and subcontractors, are so crazy to get work that they will sign just about anything which is put before them, no matter how difficult the conditions or how unfair. I feel that in a case like this one, there should have been a saving clause which would have afforded protection, specifying that if the work was not undertaken within a certain period, the contract would be invalid."

"As you know, either in general or subcontracts, and as affecting either the other contractor or the owner, this is usually taken as one of the 'hazards of the game'? The labour people are the only ones who are wise enough to get clauses put in which allow for at least upward revision of rates (on government work). We take the risk ourselves."

Mr. Reilly referred to a case in which a firm of decorators from New York had a contract in a Canadian city. "I have had several instances of these special decorative contracts", he said, "and the experience is pretty much all the same. These people get the contract as being special experts in decoration, and they send up a high-salaried chief painter, who gets the best of the local painters together, the cream, and pays them a higher rate than they have been receiving in order to hold them for his work. Coming, as he does, from a great city like New York, he is used to his men receiving about $2 an hour, and though he is willing to take the advantage of lower local rates, he will, if occasion demands it, pay higher than the home town rate. He does not see much difference between, say 75 cents and 90 cents, and as a rule has the outsider's attitude towards local arrangements, and desires to get his particular work through as rapidly as possible, being pushed by his firm, and by the owners, as his work is practically the last part of the work required before occupancy. Something like this, I believe, occurred in this instance, and then the rest of the painters got jealous and wanted the higher wage for their work as well. You know how it happens; the unions do not grade their men, and each one thinks he is as good as the other, when it comes to getting his pay."

Mr. Reilly concludes his letter with an appeal to contractors to join his Association, which would become a "strong unit and unifying force in working out the future of this country."

British system of training men and women for employment

In addition to the centres for training intending emigrants, the British Government maintains training centres which fit unemployed men and women for positions at home. The scheme of Government (or Handymen's) Training Centres was begun in 1925, and was extended in 1928 and 1929. An account of this work is given in the Annual Report of the Ministry of Labour for 1929, which is reviewed on another page of this issue. The object of the courses is to restore to the unemployed the physical condition and attitude of mind which will enable them to find their way back successfully into regular work. Training is given in the elements of specific trades, including building trades (bricklaying plastering, carpentry); furniture trades (wood machinery, cabinet making, upholstering, french polishing); coach building (body building, coach trimming, coach painting); metal working trades (motor repairing, smithing, precision filing and fitting, sheet metal working, machine tool operating); and miscellaneous (gas and hot water fitting, electric and oxy-acetylene welding, hairdressing).

Instruction is given by experts and the centres are run as far as possible on factory lines. The atmosphere is that of the ordinary industrial establishment rather than that of the technical school. "To be related to practical needs," the report states, "industrial training must, in fact, be given through the medium of specific trades. It does not follow, however, that all the men find employment in the particular trade in which they were trained. There are wide differences between individuals, but it may be stated generally that, under the system of instruction adopted, the trainees acquire considerable skill and knowledge in five or six months. They cannot then be regarded as craftsmen, but they reach the stage at which it is worth an employer's while to engage them at a wage on which they can support themselves, and, at the same time, to afford them opportunities of making progress in the trade. Whether employment is found in the trade in which training was given, or in some other, the training fulfils its main purpose in inculcating habits of steady application and ready response to ordinary workshop discipline."

The training centres are situated, not in the depressed areas from which the men have come, but in districts where industrial developments appeared to promise a substantial absorption of trainee labour. During the period of training the men attending the courses receive the unemployment benefit. Special courses are provided also for women.

"Employment Insurance" proposed in United States

Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics contributes an article to the July issue of the *Railroad Trainman*, the official monthly publication of the Brotherhood of Railroad Trainmen, on the question: "Shall we have

employment insurance or unemployment insurance"? After some criticism of unemployment insurance as practised in nineteen countries, Dr. Stewart proceeds as follows:—

"There is plenty of work to be done in this country and plenty of people to do it. The difficulty is capital and the organized machinery for production and distribution. Our annual production, all things considered, amounts to ninety billions of dollars per year. A production tax to maintain production would seem to involve no injustice, no economic fallacy. The maintenance of full employment is the maintenance of continuous market; more effective, more satisfactory in every way, than advertising and high-powered salesmanship. Give the people the income that comes from full-time employment at good wages; they will find and buy the goods they want. No window dressing necessary; you could not hide them from them.

"The machinery for the administration of an effective employment insurance is no more complicated than the machinery for unemployment insurance, which prevails in nineteen countries now. The income from a 1 per cent production tax would mean nine hundred millions of dollars per year. This would go far toward stabilizing both employment and production.

"President Hoover's proposal to the Governors' conference in New Orleans of a three billion dollar revolving fund would work right in with an employment insurance scheme. Not only would it take care of public buildings and roads, but it would provide alternative employment for seasonal industries and for dying industries. It would furnish capital for patents and projects that have real merit but lie dormant for want of capital to make them effective.

"The incentive to stabilize would become universal. All phases of production would be contributors to the fund and partners in the solution of its problems. Unemployment insurance gets its income from pay roll and from wages; employment insurance would get its income from production and price."

General Electric unemployment insurance plan

The General Electric Company is about to institute an unemployment insurance plan containing the following features:—

The plan may be adopted by any works upon an affirmative vote of 60 per cent of the eligible employees of that works. Any employee with continuous service of one year or more is eligible. A participant agrees to pay into the insurance fund one per cent of his earnings. His payments into the fund cease at any time when his earnings fall below half the amount he has averaged to earn on full time. The company pays into the fund an amount equal to that paid by participants The fund is administered by a board of trustees. The expenses of administration are paid by the company for the first two years. The company guarantees that the fund will earn five per cent interest.

When a participant receives notice of a "temporary lay-off," he begins to draw out of the fund an amount equal to half his average full-time earnings while he was employed. This amount cannot exceed $20.00 a week in any case. And he cannot receive it for more than 10 weeks in any consecutive 12 months. If an emergency should arise at any works, when unemployment was so great that the fund would be endangered on account of the fact that payments out of it were as large as the normal receipts or larger, then all employees of the works, whether participants or not, including the highest officers of the works, and all the company's general employees not attached to a particular plant, would be obliged to contribute one per cent of their earnings.

At the same time the company has announced plans for an attempt to stabilize employment, so as to minimize the necessity for payments out of the fund.

The company had, in 1929, 88,000 employees, and their average earnings for the year were $1,855.

"Prosperity reserve" to reduce unemployment

The Committee on Commerce of the The United States Senate recently submitted a report aproving a bill "to create a prosperity reserve and to stabilize industry and employment by the expansion of public works during periods of unemployment and industrial oppression." The Committee in their report pointed out that one of the greatest evils resulting from cycles of depression is unemployment, which affects those persons who are least able to bear it. "Any measure that lessens unemployment," they affirm, "strikes at the most vital phase of these cycles. . . . The principle of advance planning of public works so that expenditures may be made to influence in a good way employment conditions in the country has been accepted by all who have given it serious thought. Its application by the Federal Government will encourage municipal and

State governments to apply it in their activities. The result locally will be good and far-reaching."

Mr. John B. Andrews, secretary of the American Association for Labour Legislation, pointed out that the principle embodied in the bill had been widely endorsed by leading commercial bodies, no less than by civic organizations and by the wage earners. The American Engineering Council, the Associated General Contractors of America, the American Institute of Architects, and several chambers of commerce of Seattle, Wash., and of Philadelphia, Pa., have gone on record as wholeheartedly believing in this principle. The American labour movement has endorsed without reservation a plan of long-range planning of public works. The idea contained in the bill, Mr. Andrews said, was essentially worked out by the National Conference on Unemployment which met in Washington in 1921 at the call of the President (LABOUR GAZETTE, November, 1921, page 1373), and a special committee of that conference developed the plan.

Mr. Henry N. Dennison, president of the Dennison Manufacturing Company, one of the witnesses, laid stress on the theory that the cyclical movement in industry is ultimately the result of the condition of "aggregate business mind." "The cycle is really psychological," he said. "The various changes or conditions that build themselves up—the extension of credit that tends to an over-extension as times get good and it looks as if times were always going to be good, the centre of all these influences and this variety of sources is found in the business mind of the country. It is just because this cycle is psychological that a measure like this has an importance out of all proportion to the number of millions of dollars that it contains."

Mr. Dennison outlined the policy of planning work in advance which had been followed by his firm for many years with the result of stabilizing employment. He considered that the effects of government action in the same direction would be far-reaching. "It is the example of the Federal Government that will help: it is another argument to show business men that they should do the same thing."

International Federation of Trade Unions

The triennial meeting of the International Federation of Trade Unions, representing 24 nations, opened at Stockholm, Sweden, on July 7. A complete report on the proceedings at the convention is not available as this issue goes to press. Canada was represented by Mr. J. T. Foster, vice-president of the Trades and Labour Congress of Canada. The conference was expected to decide on the question of transferring the headquarters from Amsterdam. Britain and Sweden, supported by Germany, advocate that the offices be moved to Berlin, while France favours the continuance of Amsterdam as headquarters. The decisions of chief importance at the conference were expected to be on the subject of economic policy. During the past three years the leaders were engaged in drafting a statement of policy, and this has been before the national union centres since last year. The document declares that the organized working class does not oppose the concentration of capital and methods of increased production, but that it opposes "the employers' policy of appropriating the benefits for themselves." Stress is laid on the need for promoting the international adoption of minimum standards of working conditions, not only for social, but also for economic reasons. The draft policy insists on the right of trade union organizations to take part in the preparation and application of measures of rationalization, with full safeguards and guarantees that the workers shall share the resulting advantages.

Anti-injunction bill in United States Senate

The United States Senate recently referred to a committee the "Shipstead bill," the purpose of which is to limit the use of injunctions in connection with labour disputes. The original bill aimed at restricting the powers of federal courts by defining the kind of property that could be protected by an injunction. Subsequently a sub-committee re-drafted the bill, on which, in its amended form, the Senate is expected to vote at its session next December. The chief points of the amended bill are as follows:—

The bill would forbid the issuance of an injunction without notice and full hearing to both sides, except in cases where a grave and immediate emergency exists. In such a case the judge might issue a restraining order, without notice, to run for not more than five days, if the evidence convinces him that this should be done—provided that the party asking for the injunction puts up bonds to cover costs, damages and attorney fees for the defendants, should the granting of the injunction prove to have been in error. The bill would also prohibit injunctions against the use of union funds for strike benefits. It would allow no injunction against quitting by employees singly or in concert, to be issued. It would end the practice whereby a judge can restrain strikers from giving evidence about an indus-

trial dispute. It would declare unlawful the "yellow dog" contract, under which workmen are required to undertake that they will not become members of a labour union. It would provide for jury trials in cases where workers are charged with contempt of court because of alleged violation of injunctions, and it would forbid a judge to issue an injunction in any case where workers as a group do things which it is lawful for men to do singly.

During the month of June a total of 5,668 accidents were reported to the Workmen's Compensation Board of Ontario in the industries in Schedule 1 of the Act, 34 of which were fatal cases; in Schedule 2 industries 415 were reported including 6 fatal cases; and 224 Crown, 9 of which were fatal, were reported during the month, making in all 6,307, of which 49 were fatal.

The Minimum Wage Board of Ontario held a public hearing early in July in connection with a proposed order governing minimum rates of wages to be paid to female employees in the customs tailoring trade in the province. The proposed rates are based upon a minimum wage of $12.50 for experienced workers at Toronto. Customs tailoring was practically the only remaining trade to which the Minimum Wage Act had not been applied previously. The new order is expected to be published shortly.

The Vancouver Building Trades Council has invited the Building and Construction Industries Exchange to co-operate with them in putting into effect on August 2 provision for the observance of a five day working week in the building trades in Vancouver. It is stated that local unions which were about to ask for increases in wages agreed to waive that claim and to demand the five-day week instead.

The Ottawa Electric Railway Company has obtained from the American Electric Railway Association the second place in its accident prevention record in the year 1929 for Class A electric railways. More than 200 electric railways were entered in the competition, which is known as the Anthony N. Brady Medals Award and in which all street railways in the American association's membership, including Canada, the United States and South America, participated.

The Manitoba Co-Operative Fisheries, better known as the Fish Pool, at their third annual meeting held in Winnipeg on June 10, voted in favour of continuing the operation of their organization for the year just commencing. It was felt by those in attendance that the principle of co-operative marketing of fish had not been impaired in spite of misfortunes that had been encountered during the period of establishing the Pool in business.

Oil Production in Nova Scotia

The first plant to be established in Canada for the production of crude petroleum from oil shales was opened at New Glasgow, Nova Scotia, on July 4, when the Hon. G. S. Harrington, Minister of Mines for the Province declared the business of "Torbanite Products Limited" to be inaugurated.

Dr. George H. Kent, on behalf of the directors of the company, said that the firm had been incorporated for the purpose of developing the immense deposits of that variety of oil shale known as torbanite, which exists not only in New Glasgow, but in several other localities throughout the Province. The production of crude petroleum from oil shale is not a new idea, he said, and the process is by no means complicated. The rock is heated to about 800 degrees Fahrenheit in an air-tight retort and the resulting hydro-carbon gases are then cooled and condensed into oil. He stated that there were three factors essential to the success of an industry of this kind: an abundant supply of high grade raw material; economy of operation; and an assured market. All these factors were present in the case of Torbanite Products Limited.

Dr. Kent proceeded to state that the company's holdings of raw materials contained at least one billion tons of torbanite. This was a very conservative estimate and was based on a number of actual test borings. As regards the quality of the raw material, the available torbanite is the very best grade of oil shale, with a high content of gasoline, kerosene, lubricating oils, paraffin, etc. As high as 170 imperial gallons of oil have been extracted from one ton of torbanite, and the average extraction is from one to one and one-half barrels imperial measure per ton. The residue which remains after the oil is extracted contains sulphate of ammonia, paint pigments, alumina, moulding sands and other elements of commercial value. This residue alone, without any further processing, can be sold to manufacturers at prices from $5 to $30 per ton.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of June was reported by the local superintendents of the Employment Service of Canada to be as follows:—

Only a few requests for farm help had been received by the offices in the province of Nova Scotia, but agricultural prospects were stated to be encouraging, with growth of crops proceeding satisfactorily. The fishing industry reported that good catches were being made. Summer logging operations, chiefly involving the cutting and peeling of pulpwood, were proceeding normally, with workers being referred to vacancies that were arising. Manufacturing, including the iron and steel group, showed a fair measure of activity. Biscuit, confectionery, ice-cream and soft drink manufacturers reported business as good. Sawmills and woodworking factories continued to be well employed. Coal mines at Stellarton operated on steady time, but other mines in the New Glasgow district were working part time only. Mines in Inverness and Glace Bay district were, with one exception, operating from four to six days per week. One colliery which worked three days only was expected to close down shortly. The building and construction industry appeared to be active, particularly in Halifax and New Glasgow, where several important projects were under way. Freight traffic, both incoming and outgoing, was reported heavy. Passenger traffic was also good with a number of tourists coming from the United States. Trade was fair only in some districts, while buying in other localities was reported to be quite up to the average. In the Women's section the demand for qualified domestics continued much greater than the supply.

There were few demands for farm help in the province of New Brunswick, but where wages were satisfactory, there was no difficulty in filling orders. Woodsmen were still in demand for pulp peeling and men were sent out as required. Large catches of fish were reported, especially salmon, and local fishermen were doing well at their permanent fishing stands. In the manufacturing group, pulp and paper was brisk in Northern New Brunswick, with sawmills also busy, as were sash and door factories. Foundry employees were not so well employed, nor were the factories in Saint John operating on full time. Construction, both building and highway, showed a very satisfactory volume of activity throughout the province. Trade was seasonally good. The usual quota of women domestic workers was being placed.

The demand for farm workers in the province of Quebec had lessened in the majority of offices. With the curtailment of river driving throughout the province, placements were fewer in the logging industry. A slight decrease was reported in mining activities. The general situation in the manufacturing industry was almost equally divided, some groups showing increased activity, others a decline. In Montreal, the boot and shoe trades were not busy, but textiles were satisfactory and a large proportion of clothing workers was at work. There was no revival of activity in the metal trades. In Quebec the situation in the leather trades was dull. Clothing and confectionery were active, while other manufactures operated on reduced time. Elsewhere in the province prospects were good. The building trades in Montreal were fairly active, but in Quebec there was a certain number of building tradesmen unemployed. A large number of municipal workers was employed by the former city with the adoption of the two shift system. Trade showed gradual improvement. With a keen demand for women domestic workers, the offices reported some difficulty in filling vacancies on hand.

With the advent of the haying season in the province of Ontario, stimulus was given to farm work, resulting in an increased demand. All orders for help, however, could be filled locally without any difficulty. Pulp cutters and peelers were still required in the logging industry and while orders were fairly good, there was no trouble in filling them quickly. Some placements of river drivers were also made, but the season was practically over. A number of experienced miners secured work at the mines in Timmins but in the Sault area and at Sudbury all mines were fully staffed. In the Cobalt district, flood conditions had caused considerable damage, necessitating the shutdown of plants, consequently throwing out of work many men engaged in the industry. Unsatisfactory conditions still prevailed in manufacturing circles with little indication of immediate improvement. Reduced working hours and smaller staffs continued to be the rule. Work in the building and construction group was progressing and absorbed workers throughout the province. The opinion seemed to be, however, that there was considerable curtailment of activity in building operations over other years, for the corresponding period.

leaving a large surplus of tradesmen and labourers without steady employment. Several centres reported conditions fairly good in street paving and road construction. Heavy rains, which caused washouts on railroads, provided temporary work for many unemployed in the Sudbury district. There was little improvement shown in working conditions for women, as employers had departed for their summer homes, thus releasing the casual worker from

Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs: storage holdings of butter and cheese.

her one or two days of work a week. Summer hotels were absorbing some of the domestic workers but in spite of this, there were many women applying at the offices for whom no work was available.

With crop conditions in the province of Manitoba reported as good, some offices reported a considerable gain in vacancies in the farming group, while others registered no increase in the demand for workers, but plenty of help available. Building construction on the whole was quiet, though in Winnipeg, there was a fair amount of activity and the contemplated program included work on the Wildwoods Club at Fort Garry and the erection of a new school at Elmwood. Few men were sent out, either for road or highway construction. Mines were quiet, due in part, to lack of financial backing. Trade was fair, there being the usual holiday demands for campers' supplies. In the Women's domestic division of Winnipeg all sections were kept busy, while other offices reported a decline in vacancies, with plenty of applicants ready for work.

Throughout the province of Saskatchewan, agricultural conditions were unfavourable and there was little call for farm help. Building and construction work in general was at a low ebb and there were plenty of men available for all jobs offered. Railway work was practically nil. The demand for women domestic workers was fair, with all orders easily filled. The general situation throughout the province was unfavourable, showing little improvement, with a large number of tradesmen and casual labourers unemployed.

Crop prospects throughout the province of Alberta were reported to be favourable, the recent heavy rains having improved the situation. The demand for help, however, was limited and there was sufficient labour to meet all requirements. Building construction was fair, but proposed work on highways in some localities had not yet materialized. Casual employment, as a relief measure, was still being supplied to a certain number of applicants in the city of Calgary. Railroad work was quiet. Slightly more activity was shown in the mining group, though there was still little demand for miners. In the Womens' domestic division, there were few requests from the country for either maids or housekeepers, but still a fair call for town help, with a surplus of applicants listed.

In the province of British Columbia, there was little demand for farm help and all orders were easily filled. Showery weather somewhat handicapped the farmer in hay-making, but, otherwise, had proved a boon to the crops, especially to the fruit, as there is little water for irrigation. There was little change in the logging situation, with very little lumber moving, the majority of camps closing down for their semi-annual overhaul, lasting for about two weeks. Coal and metal mining was quiet, with a great surplus of unemployed. Manufacturers, as yet, showed no activity, although employment in the canneries was anticipated in the near future. Very little progress was reported in the building and highway construction group, there being only a nominal call for workers. In the railroad division little or no work was available. A fairly good demand for casual help on the waterfront helped out the unemployment situation in some localities. Trade showed no change. A slight increase in hotel orders amongst women domestic workers was recorded but city calls were about as usual, a fair number of workers being placed. Unemployment conditions throughout the province were most unfavourable, with no relief in sight. A large number of transients was reported by the larger cities and these added to the difficulties of the situation.

EMPLOYER'S REPORTS.

The Dominion Bureau of Statistics tabulated returns on employment from 7,256 firms with 1,021,951 employees on their payrolls on June 1, as compared with 976,538 on May 1. This increase of 4.7 per cent brought the index to 116.5, as compared with 111.4 in the preceding month, while on June 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923 1922 and 1921, it was 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7, respectively.

Expansion was noted in all of the five economic areas, the increase being greatest in Quebec. In the Maritime Provinces, manufacturing, logging and construction registered heightened activity, while transportation was seasonally slacker. In Quebec, construction, manufacturing, logging and transportation recorded pronounced increases in personnel, and smaller gains were shown in the service and trade groups. In Ontario, construction registered the greatest expansion, but gains were also noted in mining, transportation, logging, communications and services. In the Prairie Provinces, construction, especially railroad construction, transportation, manufacturing, services, trade and communications reported the most marked improvement. In British Columbia, construction and manufacturing recorded the largest advances, while other groups showed little general change.

The trend of employment was favourable in five of the eight cities for which separate tabulations are made: Montreal, Quebec, Toronto, Ottawa and Winnipeg showed consider-

able gains; declines were noted in Hamilton and Windsor (including the Adjacent Border Cities), while in Vancouver the situation was reported as unchanged. In Montreal, transportation, construction, manufacturing and trade reported the greatest increases, but services were also busier. In Quebec, the gains took place chiefly in manufacturing and construction. In Toronto, manufacturing, particularly of textile and iron and steel products, was slacker, but improvement was shown in construction, trade and transportation. In Ottawa, construction recorded heightened activity. In Hamilton, most of the decrease took place in manufacturing, notably in iron and steel plants, while construction was busier. In Windsor and the Adjacent Border Cities, declines were registered in automobile factories, in which they were on a much smaller scale than on June 1, 1929; construction was also slacker. In Winnipeg, most of the improvement was recorded in construction, manufacturing and communications. Manufacturing reported the bulk of the gain in Vancouver, where there were reductions in trade and some other industries, so that no general change was recorded in the city.

An analysis of the returns by industries shows that there were increases in manufacturing, particularly in lumber plants, but also in the fish-preserving, vegetable food, building material, rubber, electric current, electrical apparatus, mineral product, non-ferrous metal and some other industries. On the other hand, iron and steel, shoe and textile factories were seasonally dull. Logging, metallic ore mining, transportation, communications, construction and maintenance, services and trade also registered considerable improvement, that in construction and transportation being most noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of June, 1930.

TRADE UNION REPORTS.

Contrary to the improvement which has been indicated by local trade unions during the last two months, employment at the close of May showed some curtailment, dullness in the garment trades in Quebec affecting the situation to a marked degree. For the month under review reports were received from a total of 1,679 local unions with 198,595 members, 10.3 per cent of whom were idle contrasted with 9.0 per cent in April. In addition to the Quebec reductions in activity nominal recessions were reflected by Manitoba, Alberta and British Columbia unions. In the remaining provinces a higher employment level was maintained, Saskatchewan unions showing the greatest expansion. Compared with the returns for May 1929, when 4.0 per cent of idleness was registered, all provinces shared in the retrogressive movement during the month reviewed, the contractions in Quebec, Alberta and British Columbia being the most extensive.

On another page of this issue will be found a more detailed article, with tabular statements on unemployment among local trade unions at the close of May, 1930.

EMPLOYMENT OFFICE REPORTS.

During the month of May, 1930, the offices of the Employment Service of Canada made 30,585 references of persons to employment and effected a total of 29,318 placements. Of these, the placements in regular employment were 16,361, of which 12,304 were of men and 4,057 of women. Placements in casual work numbered 12,959. Employers notified the Service of 31,449 opportunities for employment, 19,936 being for men and 11,513 for women. Applicants for work totalled 46,507, of which 32,388 were men and 14,119 were women. Gains were recorded in the total business transacted when a comparison was made with the preceding month, but a decline was shown when the reports were compared with those of the corresponding period of last year, the records for April, 1930, showing 30,350 vacancies offered, 44,145 applications made and 28,325 placements effected, while in May, 1929, there were recorded 42,793 vacancies, 50,395 applications for work and 39,542 placements in regular and casual employment. A report in detail of the work of the offices for the month of May, 1930, will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during May, 1930, was $19,621,302, as compared with $16,286,993 in the preceding month and with $24,185,738 in May a year ago.

The *MacLean Building Review* states that the month of June showed an increase of 16.7 per cent in the value of construction contracts awarded throughout Canada, over the preceding month. This total, however, is 24.4 per cent less than for June last year, which had the largest total in history. For the half year, strictly building types were down 25.6 per cent from 1929, but all construction is just 13.1 per cent less. The total for June this year was $54,728,200. Of this total, $20,297,200

was for business buildings; $19,612,000 was for engineering purposes; $12,211,400 was for residential buildings; and $2,607,600 was for industrial buildings. The apportionment of the contracts awarded during June by provinces was as follows: Quebec, $22,268,800; Ontario, $14,370,900; Manitoba, $4,341,700; Saskatchewan, $4,180,500; British Columbia, $3,242,100; Alberta, $2,724,600; New Brunswick, $2,569,400; Nova Scotia, $1,019,200; Prince Edward Island, $11,000.

Production and Trade

Industrial Production

Figures showing the volume of production in certain industries during recent months, and also in the corresponding months last year, are shown in the table on page 744.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that the trend of business operations showed improvement in May. The volume of crude petroleum imports indicated strong demand for gasoline and a large distribution of petroleum products during the present season. The import of 99,213,000 gallons of petroleum is much larger than in any other month of 1930, even after seasonal adjustment. Imports of raw rubber also showed a pronounced gain, contrary to the usual seasonal tendency. A moderate increase was shown in the output of motor cars and trucks, while a recession would have been normal in May compared with preceding months. The newsprint industry showed further increase in the output of the principal product. Imports of raw cotton increased to 7,056,000 pounds, being at the maximum for the year after seasonal adjustment. The iron and steel industry, however, was less active in May. The gain in the index for the total volume of manufacturing production was considerable, indicating that at least some of the important industries are expanding their operations.

The output from Canadian coal mines during May was 1,114,848 tons, a decrease of 3.59 per cent from the 1925-1929 average for the month of 1,156,335 tons. Bituminous coal mined during the month amounted to 988,812 tons, sub-bituminous coal 17,067 tons, and lignite coal, 108,969 tons. Mines in Nova Scotia produced 630,397 tons; in New Brunswick, 14,087 tons; in Saskatchewan, 21,024 tons; in Alberta, 281,724 tons; and in British Columbia 157,616 tons. Nova Scotia and Alberta were the only producing provinces to record increases in output over last month. Imports of coal into Canada in May totalled 1,373,573 tons, as compared with 1,567,834 tons imported during the same month of 1929. The imports during the current month were obtained from Great Britain, the United States, Russia, and China. Receipts of anthracite amounted to 312,564 tons; of bituminous, 1,060,626 tons, and of lignite, 383 tons. Exports of Canadian coal were recorded at 38,900 tons, a decline of 34.22 per cent from the five-year average for the month of 59,129 tons.

Copper production of 26,599,188 pounds was 45.1 per cent higher than the total of 18,328,736 pounds in April, 1929.

Canadian gold output reached a total of 169,166 ounces, an increase of 10 per cent over the April, 1929, total of 153,389 ounces.

Ontario, British Columbia and the Yukon accounted for the total Canadian production of lead during April. The output for the month was 29,360,473 pounds, an advance of 8.3 per cent over the April, 1929, total of 27,103,985 pounds.

An increase was recorded in the production of nickel during April, when 10.19 million pounds were produced as against on output of 9.47 million pounds during the same month of 1929.

Silver production in April amounted to $2,568,017 ounces; the April 1929 output was 1,326,251 ounces.

Zinc output at 20,180,602 pounds was slightly below the March level but 13.7 per cent above the April, 1929, total of 17,746,976 pounds.

Asbestos shipments from Canadian mines totalled 23,825 tons; a slight decrease from the total of 24,770 tons shipped during the same month of 1929.

External Trade

A summary of Canadian trade by the Department of National Revenue shows that in May, 1930, the merchandise entering Canada for consumption amounted to $101,544,817 as compared with $71,401,839 in the preceding month and with $125,615,364 in May, 1929. The chief imports in May, 1930, were: Iron and its products, $26,157,365; Non-metallic minerals and products, $16,054,676; Agricultural and vegetable products, mainly foods, $13,575,187.

The domestic merchandise exported during May, 1930, amounted to $77,260,557, as compared with $50,744,139 in the preceding month and with $107,472,827 in May, 1929. The chief exports in May, 1930, were: Wood, wood products and paper, $23,246,210; Agricultural and vegetable products, mainly foods, $19,517,782; Non-ferrous metals and their products, $11,260,130.

Strikes and Lockouts

The time loss due to industrial disputes in June, 1930, was much less than that occurring in May, 1930 there being approximately only one-quarter as many workers involved. As compared with June, 1929, the figures for June, 1930, show that only about one-third as many disputes occurred, and, although the number of workers involved was slightly greater, less time-loss was recorded than in June, 1929, during which month numerous strikes in the construction industries caused a fairly large loss in working days. There were in existence during the month six disputes, involving 1,116 workers and resulting in a time loss of 3,351 working days, as compared with thirteen disputes, involving 1,824 workers, and resulting in a time loss of 12,957 working days in May, 1930. In June, 1929, there were on record seventeen disputes, involving 803 workers, and resulting in a time loss of 6,231 working days. At the end of the month there was one dispute recorded as a strike or lockout, involving approximately 125 workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $11.10 at the beginning of June, as compared with $11.17 for May; $10.92 for June, 1929; $10.73 for June, 1928; $10.86 for June, 1927; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. The prices of milk, butter, cheese, tea, sugar, veal and mutton were lower, while slight increases occurred in the prices of beef, fresh pork, eggs, beans and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged $21.44 at the beginning of June, as compared with $21.49 for May; $21.18 for June, 1929; $20.97 for June, 1928; $21.04 for June, 1927; $21.31 for June, 1926; $20.67 for June, 1925; $20.22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June, 1914. Fuel was practically unchanged. Rent showed a slight increase.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued toward lower levels, being 88 in June, as compared with 89.9 for May; 93.5 for June, 1929; 96.9 for June, 1928; 98.7 for June, 1927; and 100.1 for June, 1926. In the grouping according to chief component materials all of the eight main groups were lower, the Vegetables and Vegetable Products group, due mainly to lower prices for grains, flour, tea and rubber; the Animals and their Products group, because of lower prices for steers, calves, milk, butter and eggs, which more than offset advances in the prices of hogs, lambs and hides; the Fibres, Textiles and Textile Products group, due to decerases in the prices of cotton, silk, hemp and jute, which more than offset higher prices for wool; the Wood, Wood Products and Paper group, due to lower prices for certain lines of lumber; the Iron and its Products group, because of declines in the prices of automobile body plates, steel sheets and scrap steel; the Non-Ferrous Metals and their Products group, due to lower quotations for silver, copper, brass sheets, tin and zinc; the Non-Metallic Minerals and their Products group, due chiefly to lower prices for fuel oil and cement; and the Chemicals and Allied Products group, because of lower prices for copper sulphate, calcium chloride, shellac and citric acid.

The manager of a business concern at Toronto was ordered in June by the magistrate to pay sums amounting to $100 to three telephone operators engaged by him to work for the company. The operators had received checks for the amounts due signed by the manager but there was not sufficient money in the bank to the credit of the company to cover the checks. The magistrate therefor held the manager personally liable.

The York County Council (Ontario) at a meeting on June 25 named a committee of five members to interview the provincial government in order to propose an amendment to the Mothers' Allowance Act so as to include mothers with only one child and to change the name of the Board to the Mothers' Pensions Board.

The Province of Quebec Safety League states that there are four "first aid" qualifications that every foreman and every manager should possess. He should be able to recognize shock, to stop bleeding, to carry out artificial respiration, and to arrange comfortable transportation for the injured.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JUNE, 1930

DURING the month of June the Department received the reports of two Boards of Conciliation and Investigation established to deal with disputes between (1) The Moose Jaw Electric Railway Company and certain of its employees, being members of the Amalgamated Association of Street and Electric Railway Employees of America; and (2) the Saint John Branch of the Canadian Construction Association and certain of their employees, being members of Local 1009, Brotherhood of Painters, Decorators and Paperhangers of America.

An interim report was also received from the Board established in connection with the dispute between the longshoremen at Vancouver, as represented by the Vancouver and District Waterfront Workers' Association, and the employers as represented by the Shipping Federation of British Columbia (LABOUR GAZETTE, June 1930, page 632). The report of this Board will be given in a future issue.

Applications Received

During June an application for the establishment of a Board of Conciliation was received in the Department from motormen, conductors and busmen employed by the Winnipeg Electric Company, being members of the Street Railway Employees' Unit of the One Big Union. The dispute arose over the alleged wrongful dismissal from the service of the company of three employees. The application was before the Minister for consideration at the close of the month.

Two applications for the establishment of Boards of Conciliation and Investigation were received during the month from two groups of employees of the Winnipeg Electric Company, namely (1) Mechanical Department employees, and (2) trackmen.

Board Established

Reference was made in the June issue of the LABOUR GAZETTE to the application received from certain employees of the Winnipeg Electric Company, being motormen, conductors and busmen, members of the Street Railway Employees' Unit of the One Big Union. By mutual agreement this dispute and the two disputes affecting the mechanical department employees and the trackmen, applications for which were received during June and are noted above, were referred to one Board. The three disputes involve the question of wages and working conditions. The number of employees affected was given as approximately 1,000. A Board was accordingly established and was constituted as follows:—The Honourable Mr. Justice W. J. Donovan, of Winnipeg, Manitoba, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. C. E. Dafoe, Winnipeg, Man., the company's nominee; and Mr. R. B. Russell, Winnipeg, Man., the employees' nominee.

Other Proceedings under the Act

Reference was made in the June issue of the LABOUR GAZETTE to the establishment of a Board of Conciliation and Investigation to deal with the application received from the officers and crew of the SS. "P. E. Island," owned by the Canadian National Railways and operating between Borden, P.E.I., and Cape Tormentine, N.B. and to the appointment of two Board members. The Board was completed on June 13 by the appointment of Professor Herbert L. Stewart, Dalhousie University, Halifax, N.S., chairman, on the joint recommendation of the other Board members, Mr. James Friel, K.C., of Moncton, N.B., the employer's nominee, and Mr. J. L. Cohen, of Toronto, Ontario, the employees' nominee.

Report of Board in Dispute Between Moose Jaw Electric Railway Company and Its Employees

A report was received on June 13 from the Board of Conciliation and Investigation which had been established to deal with a dispute between the Moose Jaw Electric Railway Company and certain of its employees, being members of the Amalgamated Association of Street and Electric Railway Employees of America. The personnel of the Board was as follows: Honourable Mr. Justice George E. Taylor, of Moose Jaw, chairman, appointed on the joint recommendation of the other Board members, Messrs. James Kennedy, and Albert Roy Everts, both of Moose Jaw, Sask., nominees of the employer and employees respectively. The report of the Board was unanimous and was accompanied by a signed agreement between the parties disposing of all matters in dispute. The texts of the Board's report and agreement follows:

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a Dispute between Moose Jaw Electric Railway Company Limited, Employer, and certain of its Employees, being members of the Amalgamated Association of Street and Electric Railway Employees of America, Employees.

The Board of Conciliation appointed herein under the Industrial Disputes Investigation Act has the honour to report to the Honourable the Minister of Labour as follows:

1. That the consideration of the said matter was opened on Monday, May 26, 1930, the Members being duly sworn, and the Board in public sittings heard the respective contentions of the parties, and enquired into the matters in dispute.

2. Thereupon the Board on consideration agreed to endeavour further to effect a settlement between the parties; and are pleased to report that these efforts were successful and that the settlement agreed upon was embodied by the Board in the agreement signed by parties forwarded herewith.

Dated at Moose Jaw, Saskatchewan, this fourth day of June, 1930.

(Sgd.) GEO. E. TAYLOR.
Chairman.
(Sgd.) JAMES KENNEDY.
(Sgd.) A. R. EVERTS.
Board of Conciliation.

AGREEMENT *made and entered into (in duplicate) this third day of June, A.D., Nineteen hundred and thirty by and between the Moose Jaw Electric Railway Company Limited (hereinafter referred to as "The Company") and Division No* 614 *of the Amalgamated Association of Street and Electric Railway Employees of America representing the employees of said Company affected by this agreement.*

Whereas in or about the month of June, Nineteen hundred and twenty-seven, the parties hereto entered into an Agreement respecting wages and working conditions and disputes having arisen between them in reference thereto a Board of Conciliation and Investigation was established to enquire thereinto under the Industrial Disputes Investigation Act:

And whereas the said parties presented their case and contentions to the said Board and on the said Company presenting its financial statement thereto the employees on consideration thereof withdrew the application for an increase in wages and it has been agreed between the the parties to settle the said dispute on the terms and conditions hereinafter mentioned:

Now this Agreement Witnesses:—

First, that the said Agreement made in the said month of June, Nineteen hundred and twenty-seven, between the parties hereto shall save as hereinafter set out remain in force and effect between the parties hereto for a period of one year from the first day of June, Nineteen hundred and thirty, and thereafter until changed by the parties hereto; and either of the parties desiring to open up the Agreement or wage schedule after the first day of June, Nineteen hundred and thirty-one, shall give to the other party at least thirty days notice in writing and paragraphs referred to as Clauses (1) and (2) in the said Articles of Agreement are altered accordingly.

Second, that sub-section (*b*) of paragraph Eleven in the said Agreement shall be altered to read as follows:—Uniforms: Operators on entering the Company's service to be furnished with one full uniform including cap and extra pair of trousers and the same each year thereafter. Same to be of staple quality and satisfactory fit. An operator leaving the service within six months of receiving a uniform shall return same to the Company; all other uniforms to remain the property of the operator. Every employee shall be responsible for any uniform furnished to him reasonable wear and tear excepted and shall look after it with due care and attention.

Third, that the paragraph numbered Clause Eleven, Sub-section (*c*) reading:—"All permanent employees with one year's service shall be given one week's holiday a year with pay, said week to consist of six days of nine and one quarter hours each," on the consent of the said employees owing to the financial conditions presently prevailing is suspended until the first day of June, A.D., Nineteen hundred and thirty-one; it being understood that arrangements will be made for employees desiring them to have holidays without pay.

In witness whereof the representatives of the said parties have hereunto set their hands

Signed on behalf of the said The Moose Jaw Electric Railway Company Limited

(Sgd) GEORGE T. CONNOR.
Manager.

Signed on behalf of Local No. 614 of the Amalgamated Association of Street and Electric Railway Employees of America.

(Sgd.) JNO. H. SHIELDS
President.
(Sgd.) C. G. FRANKLIN.
Secretary.

Witness
(Sgd. G. E. TAYLOR.
Chairman of Board of Conciliation.

AGREEMENT *made and entered into (in duplicate) by and between the Moose Jaw Electric Railway Company Limited, hereinafter referred to as (The Company) and Division No.* 614 *of the Amalgamated Association of Street and Electric Railway Employees of America, representing the employees of said Company affected by this agreement.*

Clause 1.—Date Effective: This Agreement shall be effective as to wages from October 1, 1927, and as to hours and working conditions.

Clause 2.—Terms of the Agreement: This Agreement shall remain in full force and effect for a period of one year from June 17, 1927, and thereafter until changed by the parties here-

to. Either of the parties desiring to open up the Agreement or wage schedule shall give the other party at least thirty days' notice in writing.

Clause 3.—(*a*) Where the word Employee appears in this contract it is to have reference to members of Local No. 614 of the Amalgamated Association of Street and Electric Railway Employees of America. (*b*) When the word Operator appears in this Agreement it shall mean those employees operating street cars, busses and freight trains hauling gravel, etc., other than material for Company use.

Clause 4.—Wage Schedule: The following rates of wages shall be paid from and after June 17, 1927, during the life of this Agreement: To all Operators after having been appointed and working on a spare or regular run: First three months forty (40) cents per hour. Second three months forty-five (45) cents per hour. Thereafter fifty (50) cents per hour. Spare men reporting and not obtaining a run will be allowed one hour's pay for each report.

Clause 5.—Operators when joining the Company's service will become students without cost to the Railway Company until by the decision of the Superintendent they become competent to discharge the duties of their positions in a satisfactory and faithful manner and understand the rules and regulations governing the Railway sufficiently to enable them to overcome the ordinary difficulties encountered in Street Railway work.

Clause 6.—(*a*) Nine hours shall constitute a day's work, for which Operators shall be paid nine and one quarter hours which shall include time for reporting. Operators will report at barns ten minutes before schedule time and five minutes before for reliefs. All time over nine hours and fifteen minutes will be classed as overtime and shall be paid for at rate of time and one-half.

Clause 6.—(*b*) Six and one half hours work shall constitute a day's work upon Sundays and Holidays for which nine hours will be allowed. All time over six and one half hours will be paid for at the rate of time and a half.

Clause 7.—No person under the age of twenty-one years shall be employed to work in the capacity of Operator and said person must be able to read and write in the English language.

Clause 8.—Day Off: (*a*) No Operator shall be required to do extra work after finishing his days run if sparemen are available, and the Company shall do its best at all times to provide a sufficient extra staff so that Operators shall not be required to do extra work on their days off. (*b*) Should the Company require Operators to work on their days off, this extra work shall be paid for at the rate of time and one-quarter, with a minimum amount of four hours at regular rate for each call to duty. (*c*) Every seventh day on each duty or run shall be the recognized day off, regardless of any changes in the assignment of Operators to runs.

Clause 9.—In the event of leave of absence, sick and etc., it is to be understood that senior spareman is to take the run rendered vacant until return of absentee, unless the above procedure is not feasible, but if a regular run opens in the meantime he is to take this regular run upon arrangement of schedule.

Clause 10.—No Operator shall work more than six and one-half consecutive hours without relief except in case of emergency.

Clause 11.—(*a*) All Operators on entering service will be supplied by the Company with forty dollars ($40.00) in change and tickets, which remain the property of the Company and must be at all times available for Company business, also badge and punch, on signing the Company's form of Agreement or on entering the service upon production of a Bond. The Company agrees to increase such advance when found necessary. (The Company agrees to defray cost of bond after two months from date of issue).

(*b*) Uniforms: Operators on entering the Company's service to be given one full uniform including cap and extra pair of trousers each year. Same to be of staple quality and satisfactory fit. An Operator on leaving the service within six months of receiving first uniform shall be required to return same to the Company; all other uniforms to remain the property of the Operator.

(*c*) All permanent employees with one year's service shall be given one week's holidays a year with pay, said week to consist of six days of nine and one quarter hours each. Holidays to become effective from June 1, 1928.

Clause 12.—Lost Articles: All articles lost on cars and found by employees shall be turned into the office by the Operator who takes the car to the barn. The lost property shall be properly tagged and entered in a book that will be kept in the office for that purpose. All lost property not claimed within six months shall be given to the employee finding same. Employees having received lost property from the office shall return same or its equivalent value to the owner upon satisfactory proof of identification. Any employee having found any article on the car, shall if it can be proved that he knowingly failed to turn same article or part of same into the office be dismissed from the service.

Clause 13.—All Bus Operators shall be taken from the ranks of Street Car Operators when busses are put into service when at the same time street cars are taken from the service.

Clause 14.—(*a*) Barn men shall be responsible for all signs being properly displayed on cars and Operators will not be required to alter signs at any time unless in an emergency on the road.

(*b*) Barn men will see that in all cars fires are prepared to light upon leaving the barn.

Clause 15.—Suitable seats shall be provided for Operators on all cars, said seats to be placed in a position where convenient for Operators in the proper discharge of their duties.

Clause 16.—All cars shall be supplied with the necessary appliances for heating from on or before October 1, until May 15. All ashes shall be cleaned out of Stoves while cars are in the barn at night and provided with kindling for the following day.

Clause 17.—When a car is taken off a run for repairs it shall be returned to its proper place as soon as repairs are completed unless for reasons over which the Company have no control it becomes necessary to place temporarily on another run but same will be returned to rightful place as soon as possible.

Clause 18.—The Company shall provide modern equipment for all its cars and see that they are kept clean and free from oil and grease for their safe and comfortable operation by its employees.

Clause 19.—Lavatories shall be provided at places convenient for all Operators when on duty.

Clause 20.—General: Employees shall be paid twice monthly viz.: on the 12th and 27th of the month respectively except where the above dates fall on Sunday, Civic or Legal Holidays when they shall be paid on the day previous.

Clause 21.—Employees only shall be given free transportation at all times over all lines and buss routes, exclusive of de Luxe Service, of the Company.

Clause 22.—(*a*) No employee shall be censored in public. If any offence is serious he shall be placed on the suspension list pending an investigation. The Manager only shall have the power to dismiss an employee and then only after he has been suspended three days. Notification and cause of suspension shall be in writing. No employee shall be disciplined unless the name of the complainant is given him.

(*b*) Any Employee who is suspended or dismissed shall have the right to have his case investigated by the properly qualified officers of the "Association." The said committee shall have the right to appeal to the manager when evidence from both sides shall be submitted. Such investigation shall be held within three days (Sundays and Holidays not included) of the date the Employee was notified of his suspension or dismissal, and in the event of the decision of the Manager not being satisfactory the Company agrees to have the matter referred to a Board of Arbitration, which Board shall consist of one member appointed by the Association and one appointed by the Company. These two shall meet within twenty-four hours and select a third arbitrator or umpire and in the event of the disagreement and selection not being made within three days such umpire shall be appointed by a judge of the Supreme Court. The decision of the Board shall be final and binding on all parties and if the Employee concerned is exonerated he shall be re-instated and paid for all time lost. Each party shall bear the expenses of its own arbitrator, and the expenses of the umpire shall be borne equally by the parties hereto.

(*c*) In case of an official investigation into an accident involving loss of life or serious damage to property, in which Employees are concerned the Association shall have a representative at all hearings.

Clause 23.—Any employees' committee will be granted leave of absence for any reasonable period in the interests of the Association when requested by the officers of the Association (so long as the number and time away does not seriously embarrass the relief situation of the Company) and upon the return of the members of said committee shall be installed in their respective duties.

Clause 24.—All complaints and accidents of a trivial nature will be investigated by the Company and the result of said investigation is to be communicated to the employee concerned in the form of a typewritten notice.

Clause 25.—Promotions: (*a*) The Company reserve the right to promote men from the ranks without considering seniority but will as far as possible promote senior men if qualified and in good standing.

(*b*) The Company reserves the right to promote section, car barn or other employees to the position of Operators and allow them the time served provided such men begin at the Operators' scale. They however, must start at the bottom of the spare list.

Clause 26.—The company agrees not to discriminate against any employee because he belongs to the Association and will be permitted to perform any duties prescribed by the Association, without prejudice to his service to the Company. The Company agrees to meet and treat and discuss with the properly accredited officers and committees of the Association all grievances that may arise between the said company and its Employees.

Clause 27.—All Employees shall be governed by the rules and regulations established from time to time by the Company and shall also observe all special orders bulletined or verbally conveyed by the officers of the Company unless such orders are contrary to the law or the provisions of this agreement.

It is agreed that the employees received courteous treatment from subordinate officials.

Signed on behalf of the Company.

GEORGE THOMPSON,
Manager.

Signed on behalf of Local No. 614 of the Amalgamated Association of Street and Electric Railway Employees of America.

(Sgd.) D. CARLYLE GRANT,
President.
(Sgd.) W. H. LONG,
(Sgd.) S. P. MONK.

WORKING RULES *for Operators of the Moose Jaw Electric Railway Company, Limited, adopted at meeting of Operators on—and approved by Company as per Affixed Signature of the Superintendent on—Effective November 2, 1924.*

The following terms will be interpreted as follows:—

Operator.—One in charge of a regular run.

Relief Man.—One whose duty it is to operate cars on days off for regular Operators so that they may have one day off in seven.

Spare Man.—One who is held by Company available for run when regular Operator may not report.

It is further understood that the following will in no way effect those men whose services the Company may employ as inspectors.

Duty Sheet.—1. A duty sheet will be posted by at least 18K on Friday of each week for the ensuing week's runs. Operators must work according to said duty sheet. Provided a man is posted to a wrong duty, error must be taken up with office at earliest possible moment.

Days Off.—2. Operators will not trade "days off" with any other Operator or trade working hours in any way without first gaining the sanction of office. The only exception to above being in case grievance committee wish to come in to office on matters pertaining to the Company business when it will be permissible to place available senior man in charge of car. This privilege to be mutually arranged between member of committee and Operator being placed in charge, and it is understood the Company will not bear the expense of the time lost. It is further agreed that should the Company find it necessary to call a meeting of the men's grievance committee that any working time lost by any or all members of said Committee will be re-imbursed at regular rate of wages paid.

Posting Spare and Relief Men.—3. In case regular runs become vacant for any cause whatever same will be filled by senior spare or relief man providing all regular Operators or relief men are receiving steady employment. Spare men will at no time be assigned to a run if steady or relief man or men have not received 54 hours employment each during current week.

Rights of Spare Men.—(A) It is further understood that if spare man has been assigned a run same will be held for full duration of run for day on which assigned.

Equal Rights.—4. All Operators will have equal rights so far as day or night duties are concerned.

Alternating Duty.—5. Operators and relief men will alternate day and night duty for periods of one week commencing with Sundays.

Reduction in Service.—6. When a duty or run be held in or when a reduction in service is made for any reason whatsoever any time during week with the exception of legal holidays and Sundays the runs in service will be manned by senior men.

Operator off for Life of Duty Sheet.—7. Should it so happen that an Operator should vacate a regular run permanently during the life of current duty sheet when all runs are working regularly it is understood that spare man will be assigned to his run and no further change in regular crews will be made until new duty sheet becomes effective.

Reduction of Staff.—8. In case a reduction in staff be made junior man or men will be laid off first, and should reinstatement occur seniority will again be followed in case of men who immediately apply for reinstatement: That is a man with the greatest length of service from date of signing on, will be the first of those applying to be reinstated.

Extra Runs.—9. Special or Extra runs will be taken by senior spare man or men unless regular or relief men are available and in such case the senior man will be given the run to the extent of obtaining the full week's work of 54 hours. (Then should a run be still available after the normal requirements of regular and relief men be satisfied same will be given to senior available spare men).

Badge Numbers.—10. Operators will receive badge numbers in rotation according to seniority oldest men obtaining smallest numbers.

Arrangement of Car Crews.—11. A day and relief run will in all instances be made up of directly succeeding badge numbers, viz; badge numbers 1 and 2 will constitute day and relief crew. Badge No. 3 and No. 4: 5 and 6 and so on.

Relief Hours.—12. Relief hours will be at 10K and 13K and 18K. Day run will be from 6K to 10K and from 13K to 18K. Relief run from 10K to 13K and from 18K to 24K. No variation of this ruling will be permitted.

13. If for any reason an Operator fails to take his run it will be necessary for him to report at office up to 18K before again resuming his duty.

Exchange of Runs.—14. Should it be necessary to exchange an experienced Operator for a junior man to place on a more hazardous run it is agreed that the senior man will not lose his regular time by reason of the exchange. It is further agreed that in such change a day man will be exchanged for a day man and relief for relief in so far as be possible.

15. It is understood that these working rules in no way effect agreement between the Company and the men. Said agreement shall remain binding and in full force. Should any occasion arise wherein these clauses should conflict with the agreement made between the Company and the men it is understood that the ruling of regular agreement shall stand.

SIGNED on behalf of the men,

(Sgd.) A. HOWARD,
(Sgd.) W. FLETCHER,
Committee.

SIGNED on behalf of the Moose Jaw Electric Railway Company, Limited. (Name omitted.)

Report of Board in Dispute Between Construction Employers at Saint John, N.B., and Their Painters, Decorators, Etc.

The Minister of Labour received during the month the report of the Board of Conciliation and Investigation established to deal with the dispute between various employers, members of the Saint John Branch of the Canadian Construction Association, and certain of their employees, being members of Local 1009, Brotherhood of Painters, Decorators and Paperhangers of America. The Board was composed of the following members:—Rev. C. Gordon Lawrence, of St. John, N.B., chairman, appointed on the joint recommendation of the other Board members, Messrs. John N. Flood and James L. Sugrue, both of Saint John, N.B., nominated by the employers and employees respectively. The report of the Board was unanimous, both parties having previously agreed in writing to accept the unanimous findings. The text of the Board's report follows:

Report of Board

In the matter of the Industrial Disputes Investigation Act, and of a dispute between the Canadian Construction Association, Saint John Branch, and Local Union 1009, Brotherhood of Painters, Decorators and Paperhangers of America.

To the Honourable PETER HEENAN,
Minister of Labour, Ottawa.

The Board of Conciliation and Investigation, to whom the said dispute was referred, composed as follows: Mr. John N. Flood, representing the employers; Mr. James L. Sugrue, representing the employees, and Reverend C. Gordon Lawrence, Chairman, appointed on the recommendation of the above named, beg leave to report as follows:

All members of the Board were present at every meeting held.

Preliminary to the reference of the matter to the Board, several unsuccessful attempts had been made to adjust the matter in dispute by mutual agreement, with no result. The men quit work on May 12, demanding a minimum wage of seventy-five cents per hour, previously having refused an offer from the employers of sixty cents per hour. As a result of action taken by the men, both parties applied to the Department of Labour, and Mr. T. W. Martin of Halifax, the Eastern representative of the Department came to Saint John, and at a joint meeting, held with Mr. Martin, on Monday, May 19, both parties agreed to submit the matter to a Board of Conciliation, under Industrial Disputes Investigation Act.

The men returned to work on Wednesday, May 21, it being understood that wage rates agreed on by the Board of Conciliation would be payable from, and including, May 21.

The Board held its first meeting on May 29, at which a preliminary review of the situation was made, and arrangements made for further meetings. Representatives of the Employers appearing before the Board, were Messrs. James H. Pullen, Lyle McGowan, William Johnston and William Demmings. Representatives of the Employees were Messrs. C. R. Gervais, General Organizer of the Brotherhood of Painters, Decorators and Paperhangers of America, Fred M. Stanley, President of Local Union 1009, and A. Bassett, Financial Secretary.

An agreement was entered into, in writing, by both parties, to be bound by the unanimous decision of the Board. The matter involved many difficulties, due particularly to the different rates of wages being paid, ranging from forty to sixty cents per hour. We are indeed glad to be able to report a unanimous decision as contained in our recommendations.

We beg to submit the finding of the Board as follows:—

(*a*) The minimum rate of wage shall be sixty-five cents per hour on ordinary painting and decorating work, and ninety cents per hour on bridge and structural iron work.

(*b*) Hours of employment shall be as follows: Eight hours shall constitute a day's work, to be worked from 8.00 A.M., to 5.00 P.M., with the noon hour out for lunch, except on Saturdays, when four hours shall be worked, from 8.00 A.M., until 12.00 noon. Overtime rates at time and one-half, shall apply on all work done after the regular hours, and up to 10.00 P.M. These overtime rates not to apply to shift work. Double time rates shall be paid on Sundays and holidays, the following holidays to apply: New Year's Day, Good Friday, Empire Day, Dominion Day, Thanksgiving Day, Christmas Day, and Labour Day. No work to be done on Labour Day.

(*c*) The foregoing rates and hours of employment shall apply from May 21, 1930, to April 30, 1931, inclusive, and thereafter from year to year, unless a mutually satisfactory arrangement to the contrary is brought about, after due notice, by either employers or employees, in writing, ninety days prior to the expiry of the current term.

(*d*) That a joint arbitration committee be created, consisting of an equal number of employers and employees, to deal with all disputes, and that all disputes arising, be referred to this committee, and that such committee shall sit without unnecessary delay, and that the unanimous findings of such a committee shall be binding on both parties. Failing a finding by such committee, the matter under dispute shall be referred to a Conciliation Board, under the Industrial Disputes Investigation Act, and that no stoppage of work shall be permitted, pending the finding of such committee, or such Conciliation Board.

The foregoing in as much as it covers the points of wages, hours and conditions of employment, which were in dispute, constitutes the considered finding of this Board, and is herewith submitted as its report to the Minister of Labour.

Coupled with this finding, we beg to submit the following suggestions, the application of which, we feel, would do much to improve conditions in the industry, and make more harmonious the relationship between the employers and employees in this industry.

(*a*) We would strongly urge concerted action by both parties toward the development of an adequate apprenticeship training system in the painting trade, which system might with advantage avail itself of the facilities provided by the Vocational Training School.

(*b*) The elimination of work carried on by employees "on their own." It is our opinion that this work should be done by the employing firms, through the regular trade channels.

(*c*) In the matter of contract work under way, or contracted for prior to the dispute, and not yet completed, we would urge that consideration of the employees be given to the completion of these contracts without undue hardship to all the employers.

(*d*) That all workmen doing work beyond a reasonable distance from the City should

have railway fare both ways, travelling time, and board, unless such workmen agree to the contrary with the employer, at the time of engaging for such work.

(e) That no employee should be permitted to work after the regular working hours, for, or not for, remuneration, without permission of the employers and employees.

The proper application of the foregoing suggestions presupposes the desirability of an agreement between employers and employees, which agreement, if consummated could be drafted to cover all the findings and suggestions of the Board.

Respectfully submitted,

(Sgd.) C. GORDON LAWRENCE.
Chairman.
(Sgd.) JOHN N. FLOOD,
Representing Employers.
(Sgd.) JAMES D. SUGRUE,
Representing Employees.

Saint John, N.B., June 17, 1930.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1930

THE number of strikes and lockouts in existence in Canada during June was six, as compared with thirteen the preceding month. The time loss for the month was correspondingly small, as most of the building trades strikes occurring during May had terminated before the end of that month and no disputes of importance commenced during June. As compared with June, 1929, the figures for June, 1930, show that approximately only one-third as many disputes occurred, and, although the number of workers involved was slightly greater, less time loss was recorded than in June, 1929, a month in which numerous strikes in the construction industries caused a substantial loss in working days.

Date	Number of disputes	Number of employees involved	Time loss in working days
*June, 1930	6	1,116	3,351
*May, 1930	13	1,824	12,957
June, 1929	17	803	6,231

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving one hundred and eighty-eight workers, were carried over from May, and four disputes commenced during June. Of these six disputes five terminated during the month, one being in favour of the employer, three being partially successful and the result of one being recorded as indefinite. At the end of June, therefore, there was only one dispute recorded as a strike or lockout, namely, painters at Halifax, N.S., but there were two disputes, mentioned later, as to which particulars had not been received.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to three such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; and photo engravers, Toronto, Ont., January 7, 1929, one employer.

A minor dispute has been reported in a men's clothing manufacturing establishment in Toronto where five employees ceased work on June 6, 1930, demanding the reinstatement of a worker discharged by the management on the ground that he had been "agitating communistic doctrines during working hours, and upsetting conditions in the factory". The management the next day secured workers to replace the strikers from the Amalgamated Clothing Workers of America. As the number involved was less than six this dispute is not included in the statistical record

In the LABOUR GAZETTE for June reference was made to a strike of coal miners at Caledonia, N.S., on May 27, 1930, in which it was stated that drivers had ceased work demanding higher piece-rates for pushing cars into the working places. Further information, however, reveals that the cars were pushed into the working places by the miners, who ceased work demanding that the company should have this done by the drivers. As a result a new local contract was made provid-

ing that the drivers should do this work and receive increased rates per ton for so doing.

Information was received by the Department early in July that employees in a hat manufacturing establishment in Montreal had been locked out toward the end of June. Particulars as to this dispute have not been secured, except that negotiations for a settlement were being carried on early in July.

Information has also reached the Department as to a strike of coal miners at Mercoal, Alta., toward the end of June, but no particulars have as yet been received.

A strike of salmon fishermen near the north end of Vancouver island was reported in the press, but investigation by the Department revealed that, while a strike threatened, no cessation of work occurred, work being continued pending further arrangements as to the price to be paid for fish by the canners.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—This dispute, affecting one establishment since March 18, 1930, to secure union recognition and union working conditions, was settled on June 17, 1930, the union members on strike returning to their former positions without discrimination, the employer conceding the forty-four hour week and the right of the employees to belong to the union. Certain strikers had been arrested and charged with intimidation on the complaint of the company, and it was arranged that these charges should be withdrawn.

PAINTERS, HALIFAX, N.S.—At the end of June this dispute was still unterminated, and, as work had been completed on the hotel on which a number of the strikers had secured work at 80 cents per hour under an arrangement with the contractor, the number of strikers unemployed was increased. Some, however, secured work with other employers at 80 cents per hour.

COAL MINERS, GLACE BAY, N.S.—Chain runners, fifteen in number, ceased work on June 9 to secure an increase in piece-rates, resulting in a shutdown of the mine involving 812 other employees for one day. The local contract providing for piece-rates instead of day

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to June, 1930.			
MANUFACTURING—			
Clothing (including knitted goods)—			
Men's clothing factory workers, Montreal, P.Q.	63	756	Commenced Mar. 18, 1930; for union wages and working conditions. Terminated June 17, 1930. Partially successful.
CONSTRUCTION—			
Buildings and Structures—			
Painters, Halifax, N.S.....	125	1,500	Commenced May 1, 1930; for increase in wages. Unterminated.
(b) Strikes and Lockouts Commencing during June, 1930.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Glace Bay, N.S..	827	827	Commenced June 9, 1930; for increase in wages. Terminated June 10, 1930. In favour of employer.
Coal trimmers and shippers, North Sydney, N.S.	56	140	Commenced June 19, 1930; against reduction in working staff. Terminated June 21, 1930. Partially successful.
CONSTRUCTION—			
Buildings and Structures—			
Electricians, Windsor, Ont.....	30	90	Commenced June 10, 1930: for increase in wages and shorter hours. Terminated June 13, 1930. Indefinite.
Carpenters, Saint, John, N.B..	15	38	Commenced June 6, 1930; to maintain Saturday half holiday as provided in agreement. Terminated June 11, 1930. Partially successful.

wages was taken up with the company by the officers of the union, but as the company refused to raise the piece rates on the ground that the workers were making more than the day rate, work was resumed the following day without any changes.

Coal Trimmers and Shippers, North Sydney, N.S.—Coal trimmers and shippers at North Sydney ceased work on June 19, some having been laid off because there was not work for all. The number of those involved was fifty-six, but certain collieries were closed down as a result, involving 1,477 workers. Work was resumed on June 21, half of the men being employed on alternative days pending further negotiations.

Electricians, Windsor, Ont.—Electrical workers went on strike on June 10, 1930, against fifteen contractors, demanding an increase in wages from $1.37½ per hour to $1.50, and a reduction in hours from forty-four per week to forty. It was reported that a certain number of contractors agreed to the increase and were not involved in the dispute. On June 13 work was resumed pending further negotiations on the arrival of the international union officers. Early in July, a settlement providing for $1.37½ per hour and the forty hour week was reported.

Carpenters, Saint John, N.B.—Carpenters employed by one contractor ceased work on June 6 against being required to work Saturday afternoon at straight time, the agreement between the contractors' association and the union providing for Saturday afternoon off during the summer months, or time and one-half rates where work was necessary. Work was resumed on June 17, it having been arranged that the Saturday half holiday would be recognized by the contractor during the month of June.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

During May, the number of disputes reported as beginning in the month was 35, and 20 were still in progress from the previous month. The number of workpeople involved in the 55 disputes in progress during the month was 87,600 and the time loss 1,600,000 working days. Of the 35 disputes beginning in May, 7 arose out of demands for increased wages, 11 on other wages questions, 7 on questions respecting the employment of particular classes or persons, 6 on other questions as to working arrangements and 4 on questions of trade union principle. Settlements were reached in 41 disputes, of which 9 were in favour of workpeople, 12 in favour of employers, 20 ended in compromises; in two other disputes, work was resumed pending negotiations.

The latest reports received of the dispute in the Yorkshire woollen industry which began on April 10 and was reported in the Labour Gazette for May and June, indicate that the dispute was settled in most districts by the end of June. Different settlements were made in different districts; in some cases wages were reduced in accordance with the award of the arbitrator, and in other cases the reduction was somewhat less than what had been recommended in this award.

Belgium

The total number of disputes in existence during March was 18, involving 4,208 workers. The time loss for the month was 73,677 working days.

Australia

During the fourth quarter of 1929, the number of disputes reported was 69 involving 126 establishments and directly involving 23,642 workers. In addition, 859 workers were indirectly involved. The time loss for the period was 813,824 working days and the estimated time loss £959,490.

United States

During 1929, the number of disputes beginning in the year was 903, involving 230,463 workers, with an average of 255 employees per

dispute. The time loss for the year was 9,975,213 working days as compared with 31,556,947 in 1928 and 37,799,394 in 1927. The industries involving the largest number of employees are coal mining involving 64,202 workers, clothing involving 60,540 workers, building trades involving 44,198 workers and textiles involving 26,393 workers. The number of disputes terminating in the year was 913, of which 367 were in favour of employers, 267 in favour of employees, 226 ended in compromises, 33 were jurisdictional or protest disputes, in 3 cases work was resumed pending arbitration and in 17 cases the result was not reported.

In April, 1930, the number of disputes beginning was 45 and 39 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 6,776 and the time loss 182,713 working days for the month.

It is reported that the strike of taxi cab drivers at Pittsburgh, Pennsylvania, which began January 12, and was mentioned in the LABOUR GAZETTE for March and May, terminated in June on a compromise basis, the company agreeing to recognize grievance committees and to pay each driver a wage of 40 per cent of his gross meter receipts.

COMBINES INVESTIGATION ACT

Court Proceedings Against Combine in Plumbing Industry

COURT proceedings against members of an alleged combine of plumbing contractors and others in Ontario were resumed on June 16 in the Police Court at Windsor, Ontario. The commencement of these prosecutions by the Department of Justice in the case of *Rex v. Singer et al* was reported in the LABOUR GAZETTE, June, page 651. An investigation under the Combines Investigation Act into the operations of the Amalgamated Builders' Council, the Canadian Plumbing and Heating Guild and other related organizations, which preceded the present court actions, was reported in recent issues, commencing in that of August, 1929.

In May, 1930, thirteen plumbing contractors in London, Ontario, pleaded guilty to four charges under the Combines Investigation Act of combining to enhance prices and lessen competition to the detriment of the public in connection with plumbers' or other builders' supplies or services. The same thirteen parties entered pleas of guilty to a charge of unlawful conspiracy to defraud, laid under the Criminal Code, Section 444. Fines totalling $26,000 were imposed on the defendants by Magistrate Scandrett in the London Police Court, during the May hearings of the case, the smallest fine being $1,000 and the largest $10,000.

The June preliminary hearings in Windsor before Magistrate D. M. Brodie were occupied chiefly by an extended presentation of evidence for the defence by Louis M. Singer, K.C., Commissioner of the Amalgamated Builders' Council, and by W. F. O'Connor, counsel associated with Mr. Singer. Both Mr. Singer and Mr. O'Connor were charged, together with 31 other defendants, in eight counts, four being under the Combines Investigation Act and four under Section 498 of the Criminal Code. The Windsor charges were similar to those laid in London, with the exception of the London count under Section 444 of the Criminal Code, relating to certain alleged padding of tenders for the purpose of dividing such proceeds among the unsuccessful tenderers.

Evidence was also given in the Windsor Court by the managers of four local wholesale plumbing supply companies, in their own defence. All charges against the fifth company operating a jobbing branch in Windsor were dismissed by Magistrate Brodie on June 16.

George R. Baker, of Toronto, former vice-president of the Amalgamated Builders' Council, on June 18 pleaded guilty to the four charges under the Combines Investigation Act and was sentenced by Magistrate Brodie to pay a fine of $500 without costs or to serve six months' imprisonment in default of payment. The sentence was imposed on the first charge under the Combines Investigation Act. On the remaining three counts sentence was suspended.

After hearings of evidence occupying ten days, from June 16 to June 27, argument in the case was adjourned to July 14.

The British Minister of Labour has appointed a committee "to inquire into employment and unemployment in the port transport services in Great Britain and to make recommendations thereon. With special reference to decasualization and the administration of the unemployment Insurance Scheme and its application to port transport workers."

LABOUR LEGISLATION IN ALBERTA IN 1930

A NUMBER of laws of interest to labour were enacted during the session of the Alberta Legislature which opened on January 30 and closed on April 3, 1930. These included new laws relating to coal mines, control of electrical energy, mechanics' liens, unemployment relief, and amendments to statutes dealing with miners' wages, minimum wages for women, mothers' allowances and motor vehicles.

Coal Mines Regulation Act

The Coal Mines Regulation Act, which repeals the Mines Act, applies to coal mines, including every place where any operations incidental to the extraction of coal by removing the overlying strata are carried on, every shaft in the course of being sunk, every level and inclined plane in the course of being driven for commencing or opening any coal mine, or for searching for or proving any coal or for the operation of the same, or the shafts, levels, planes, workings, machinery, tramways, railways and sidings both below ground and above ground in, and adjacent to, a coal mine and all shafts and levels and inclined planes of, and belonging to, a coal mine, but does not include open cut prospecting for coal.

The Act is divided into thirteen parts dealing respectively with appointment of inspectors and examining boards; employment; wages; hours; employment of managers and other officials and of coal miners; qualifications for certificates; mine equipment; records, plans and returns; inspection, inquiries and inquests; general rules; duties of mine officials; shaft sinking; general provisions.

In Part I provision is made for the appointment by the Lieutenant-Governor in Council of a chief inspector, district inspectors and their deputies, and inspectors of electrical equipment. No person so appointed may during his term of office act as a mining engineer or a manager, owner, agent or valuer of mines. The Lieutenant-Governor in Council is also authorized to appoint a board of examiners, consisting of the chief inspector or a district inspector nominated by him, two managers and two certificated working miners. The minister in charge of the Act may appoint district boards of examiners and make regulations for their guidance. A register of the holders of all certificates under the Act must be kept at the office of the Chief Inspector.

Part II provides that no boy under 16 years of age and no woman or girl of any age shall be employed or permitted to be in a mine, or in or about the surface workings of a mine, for purposes of employment, except in the performance of clerical work, or of domestic duties in a hotel, boarding house or residence connected with the mine. Mine managers must, on request of the inspector, produce a copy of a birth certificate or affidavit setting forth the age of any boy employed about the mine or surface workings.

No person except a male of at least 21 years of age may have charge of or operate machinery worked by mechanical power, by manual labour or by animals, used for conveying persons. Such operators must have certificates of medical and physical fitness from a competent medical practitioner which must be renewed at least once in six months.

Part III requires that, failing a subsisting agreement to the contrary made in conformity with the Act, all wages must be paid twice a month. Wages earned from the first day to the fifteenth day, both inclusive, shall be paid on the twenty-third day of the month, and wages earned from the sixteenth day to the last day, both inclusive, shall be paid on the eighth day of the following month.

An agreement may be made between the employer and the employed as to the payment of wages at more frequent intervals than twice a month and with a waiting period other than is prescribed in the Act. A duplicate of every such agreement is to be filed with the chief inspector. Upon its production in any court such duplicate agreement shall be accepted as conclusive evidence of the terms of such agreement. If it is made to appear to the minister that any agreement for the payment of wages does not conform to the provisions of the Act he may, by notice in the *Alberta Gazette*, declare such agreement to be null and void.

A record must be kept of all workmen employed and of the wages due them and of sums paid, and the inspector must be permitted to inspect such record at any reasonable hour.

When the amount of wages paid to the workmen depends upon the amount of mineral gotten by them they shall be paid by weight or measurement of such mineral, the weighing to take place as near the mine entrance as reasonably possible, and the measurement at the working face. In mines opened after March 1, 1930, wages to be paid

according to amount of mineral gotten are to be ascertained by weight, but the minister may grant exemption from this provision. The employer may make written agreement with the employee that deductions may be made in respect of stones and other material other than minerals, or on account of improper filling of tubs or cars. If the agreement does not specify the manner of determining such deductions they are to be determined in the manner set forth in the Act, which is similar to that included in the old law.

Employees who are paid according to weight may, at their own cost, station checkweighers at the weighing place to take account of the weight of coal gotten by them. Employees who by agreement are paid otherwise than by weight may, at their own cost, employ checkers to check the correctness of the manner, method, measure, measurements or quantities Neither checkweigher or checker shall be authorized to impede in any way the working of the mine or interfere with the weighing. The checkweigher or checker must be, at the time of his appointment, the holder of a miner's certificate with three years' experience, and shall have been employed either as a miner at the coal face or as a checkweigher or checker in a coal mine in the province. No owner, agent, manager, overman or other official of a mine may influence or attempt to influence the choice or appointment of a checkweigher or checker.

Any owner, agent or manager of a mine may make application in writing to a judge of the district court for the judicial district in which the mine is situated, against any checkweigher or checker, and the judge, if of the opinion that the complaint should be investigated, shall issue a summons, and upon its return hear the case and determine in a summary manner whether the person should be removed or not, and his judgment is final. He may also appoint a person to act in the stead of the checkweigher or checker pending a new appointment, and may fix his wages.

Appointment of a checkweigher or a checker is to be made by the persons who under the Act have the right to make such appointment, attending a meeting called for the purpose by a notice setting forth the day, time, and place of meeting, posted at least forty-eight hours before the meeting in a conspicuous place upon the mine premises. Rules are laid down for the proper conduct of the meeting, and provision is made that an election, if one be held, shall be by secret ballot at the mine on the third day following the meeting, if it be a working day, and if not, then on the first working day thereafter. Immediately on the appointment or election of a checker or checkweigher, a written notice thereof signed by the chairman or secretary of the meeting or by two of the officers in charge of the balloting, as the case may be, is to be left at the office of the mine. The persons employing him may, by resolution of a meeting called for the purpose, duly signed by the chairman or secretary of the meeting and delivered to the owner, agent or manager, authorize a *pro rata* deduction from their wages sufficient to pay the wages of the checker or checkweigher which will be paid from the office of the mine in the same manner as the wages of the miners. If the owner, agent or manager or any person paid by weight disputes the regularity of the appointment of a checker or checkweigher he may take action similar to that described above for the removal of the checkweigher on the ground of misconduct.

An employee may by written order authorize his employer to apply the whole or part of his wages to the payment of any debt due by him to any other person but such order is only effective for the amount specified therein. An employer may, without any order, deduct from the wages of an employee sums due by him in respect of powder, coal, oil or other supplies, or rent.

The provisions relating to hours of employment which are contained in Part IV of the Act are similar to those contained in the old law. No person may be below ground for the purpose of his work, or for going to and from his work, or be allowed to be below ground for that purpose for more than eight hours in the twenty-four hours, subject to the exceptions set forth in the Act. A register of the times of raising and lowering is to be kept and provision is made for the appointment of a time keeper by the workmen. Authority is also given for the suspension of the hours provision by the Lieutenant Governor in Council in case of grave emergency. A clause was added to the section relating to mines entered otherwise than by shafts. It provides that, if the place at which workmen check in or out is distant more than one-half mile by the nearest practicable way from the place at which they leave or return to the surface, then the place of checking in or out shall be deemed to be the place of leaving and returning to the surface.

Part V provides that every mine shall be under the control of one manager and under his daily personal supervision while being

worked. In mines in which not more than thirty men are employed per day the overman may be also the manager, unless the chief inspector gives written orders to the contrary. The owner or agent may not interfere in the technical management of the mine in such a way as to bring about a breach of the Act or the regulations. The same person may not be manager of more than one mine unless two mines are operated by the same owner, in which case two mines may be under the same manager, unless the chief inspector gives written notice to the contrary. Except in a mine worked by removing the overlying strata or a mine in which not more than thirty men are employed per day, the manager must be at least 25 years of age and the holder of a first class certificate under the Act.

In every mine where more than seventy-five persons are employed in a calendar day there shall be an overman appointed who shall not be the manager. If more than one shift is worked in any one calendar day the underground workings are to be in continuous charge of an overman during each shift of over fifty men, and such overman may not perform other duties if these interfere with the duties imposed by the Act. An overman must be the holder of a first or second class certificate. In mines employing ten men or less, however, the holder of a third class certificate may be granted a provisional certificate by the chief inspector, authorizing him to act as overman, and in mines employing five men or less a provisional certificate may similarly be granted to the holder of a miner's certificate with five years' underground experience.

The owner, agent or manager shall appoint one or more examiners or fire-bosses who must hold first, second or third class certificates under the Act.

Part VI requires a candidate for a first or second class certificate to be at least 25 years of age, and either have five years' experience in coal mine working, or be the holder of a diploma or degree in scientific mining training after a two years' course at an approved educational institution, and have three years' experience in coal mine working, two of which have been in Canada. A candidate for a third-class certificate must be twenty-three years of age and have three years' practical experience in a coal mine. Candidates for all three classes of certificates must produce satisfactory evidence of sobriety, experience and good conduct and must also have first-aid certificates from a qualified medical practitioner.

A candidate for a miner's certificate must be at least 18 years of age and have sufficient knowledge of the English language to give and understand working directions and warnings in English. In addition he must have been employed underground in a coal mine for at least one year and satisfy the Board as to his ability as a coal-miner. Authority is given for the issue of provisional certificates by the inspector pending examination. No person may work at the working face as a coal miner unless he holds a first, second or third-class certificate or a miner's certificate under the Act. Special certificates are authorized for persons operating coal-cutting, boring, loading or shearing machinery not in use in the province at the passing of the Act.

Part VII forbids the owner, agent or manager to employ any person in a mine unless the conditions respecting outlets to the surface are complied with. Every seam which is for the time being at work must have at least two outlets not nearer to one another at any point than 200 feet, and having a communication between them not less than four feet wide and four feet high. Exception is made in the case of mines in operation before March 1, 1908, which have outlets not nearer to one another than 45 feet. Proper apparatus or ladders must be kept on the works belonging to the mine and be constantly available for use. Every part of a mine in which ten or more persons are employed at the same time must be provided with at least two ways affording proper egress to the surface. In the case of a mine operated by power obtained from a source not under the sole control of the owner of the mine and having two shafts more than 200 feet deep, proper and separate apparatus for raising or lowering persons to or from the surface actuated by an independent source of power must be kept at one of the two shafts or outlets required by the Act and constantly available for use. Certain exceptions to these rules respecting outlets are permitted, and the Minister is authorized to exempt mines on certain specified grounds.

Washhouses must be provided at mines employing more than twenty persons below ground. Properly constructed ambulances or stretchers with splints, bandages and necessary medical and other supplies for the rendering of first-aid must be kept in readiness for use. Unless there is a hospital in the immediate vicinity, two or more suitable beds must also be provided.

Mines must be provided with sufficient buildings and also with means for the production of ventilation in good working order. Mechanical contrivances for the production of

ventilation, other than auxiliaries, must be placed above ground.

Part VIII requires the owner, agent or manager to keep a record of every person employed, with his name, age, residence, number of certificate and date of first employment, and also the time of checking in or checking out and if the time between such checking in or checking out exceeds the time permitted by the Act, the reason for such excess.

The manager of the mine must make monthly returns to the Minister in a prescribed form, such returns to include the information as to whether wages due have been duly paid. In the event of no answer being given to this question or the answer showing any wages unpaid the chief inspector may apply for an order appointing a receiver.

Immediate notice must be given of accidents causing loss of life or serious personal injury or in the case of any injury by electricity or by overwinding or other causes designated by the chief inspector. An explosion, fire or other accident which might have been expected to cause injury must also be immediately reported. An explosion causing injury must be reported by telegram. If inflammable gas is found in a mine in which safety lamps are not required to be used the chief inspector and the district inspector must be immediately informed. Rules are laid down for the keeping of plans and for the safeguarding of abandoned mines.

Part IX requires an inspector to visit every mine in his district as often as his duties permit or the exigencies of the case require. Immediately on the completion of each inspection he must cause a copy of his report to be posted in a conspicuous place at or near the mine.

Where the minister considers it expedient to have an investigation of an accident at a mine or of any mater connected with its working, he may direct the inspector to hold such investigation and may appoint any person or persons having legal or special knowledge to act with him, and the inspector shall, after the investigation, make a report to the minister.

Provision is made for an inquiry into the conduct of any person holding a certificate under the Act against whom representations have been made as to incompetency, misconduct, drunkenness or gross negligence, and the minister is empowered to suspend or cancel the certificate of such person if the latter is found unfit to discharge his duties or has been convicted of an offence under the Act. Notice of such cancellation or suspension is to be published in the *Alberta Gazette*.

Rules are laid down for the conduct of an inquest on the body of any person whose death has been caused by a mine accident or explosion.

Part X contains general rules to be observed as far as reasonably practicable at every mine. These rules deal with ventilation; fencing of entrances; appointment of stations; withdrawal of workmen and inspection for gas or other dangerous conditions; safety lamps; use and storage of explosives; approach of workings to water or gas; shafts, underground planes, inclines, levels, entries and tunnels, manholes, etc.; fencing of top of shaft; security of travelling roads and working places, timbering, etc.; equipment of lowering and raising machinery and its inspection; appointment of inspectors by workmen; obedience to lawful demands; prohibition of delegation of duties without good cause or without permission by persons occupying positions of trust; dangerous acts; reporting of breaches of law; intoxication; interference; loitering; open lights; safety lamps; signals; stablemen; duties of trappers and persons in charge of haulage roads; fans; prohibition of sleeping below ground.

Part XI sets forth in detail the duties of the various mine officials including overman, examiner, shot-lighter, lampman, onsetter, outside-foreman, banksman and driver-boss.

Part XII contains a number of rules to be observed in shaft-sinking.

Part XIII lays upon the owner, agent and manager, responsibility for insuring that all operations connected with the mine are conducted in accordance with the provisions of the Act and the regulations and orders made thereunder, and authorizes the making of such regulations by the Lieutenant Governor in Council. Penalties are provided for contravention of the provisions of the Act.

Electrical Energy Act

Part I of the Electrical Energy Act, which comes into force on September 1, 1930, prohibits under penalty the use of electrical appliances and equipment other than those prescribed by the Canadian Electrical Code, and their installation in any manner save that permitted or prescribed by the Code, if there be any provisions therein governing such installation.

Part II, which comes into force on Proclamation, authorizes the Lieutenant Governor in Council to make regulations prescribing the design, construction, installation, etc., of all articles, works and matters used or to

be used in the generation, transformation, transmission, distribution, delivery or use of electrical power or energy; prohibiting the use, display, advertising and sale of such articles, works or matters until they have been inspected or approved, and prescribing the precautions to be taken and the warnings and instructions to be given to purchasers; providing for inspection of all such articles, works or matters and relating to work to be done in their installation, etc., and for plans and specifications governing their design, construction and test; providing for the licensing of electrical works and forbidding the doing of electrical work by unlicensed persons. Inspection at all reasonable hours is provided for.

Coal Miners' Wages Security Act

The Coal Miners' Wages Security Act was amended to require a mine owner to make returns and furnish security for wages even if the mine is not in operation on the date on which such returns and security are due (June 1), if it is proposed to commence operations at any time during the year following.

Unemployment Relief

The Unemployment Relief Act authorizes the payment from the General Revenue Fund of a sum not exceeding $100,000 for the purpose of supplying relief to the unemployed of the Province.

Mechanics' Liens

The Mechanics' Lien Act as consolidated and amended came into force on May 1, 1930. It is simpler in language than its predecessor and also wider in scope. The classes of property upon which a lien may arise include a structure erection, railway, tramway, wharf, pier, bulkhead, bridge, trestlework, vault, mine, water, gas, oil or other well, gas or oil pipe line, excavation, fence, sidewalk, pavement fountain, fishpond, drain, sewer, ditch flume, acqueduct, roadbed, way, fruit or ornamental trees and the appurtenances to any of them. Public streets, and highways and the work done on them by a municipal corporation are excluded. Any agreement by a labourer that the provisions of the Act shall not apply is null and void. This restriction does not extend, however, to a manager, officer or foreman or to any person whose wages are more than $12 per day. Unless he signs an express agreement to the contrary as provided above, any person performing work or service upon or in respect of, or placing or furnishing materials to be used in the making, construction, erecting, fitting, altering, improving, demolishing or repairing of any property subject to lien for any owner, contractor or sub-contractor is entitled to a lien for so much of the price of such work, service or materials as remains due to him, upon the estate or interest of the owner in such improvement and the land occupied thereby or enjoyed therewith, or upon, or in respect of which, the work or service is performed or the materials are to be used, as such estate or interest exists at the time the lien arises or at any time during its subsistence. The lien arises at the date of the commencement of the work. The right of a lien-holder may be assigned by an instrument in writing and, if not, assigned, passes upon his death to his personal representative. Where the estate or interest upon which the lien attaches is leasehold the fee simple is also subject to the lien, provided the person doing or intending to do the work gives to the owner of the fee simple or his agent written notice of the work to be done, and such owner or agent does not within five days after its receipt give notice that he will not be responsible. The lien and all mortgages rank according to the dates of their respective registrations in the proper land titles office, but no mortgage has any priority over a lien in respect of advances or payments made after the date of the registration of the lien or after the mortgagee has notice of its existence. A mortgage existing before the lien arises has priority over it only in respect of the value, at the date of proceedings to enforce the lien, of the mortgaged premises as they existed prior to the lien arising, but no such mortgage has priority over a lien in respect of advances or payments made after the date on which the lien arose. A purchaser of land on an agreement of sale is, where any of the purchase money is unpaid and he is not registered as the owner, deemed for the purpose of the Act to be a mortgagor and the seller a mortgagee.

In all cases the person primarily liable upon a contract under which a lien may arise must, as the work is done under the contract, retain for the period within which a lien must be registered, twenty per cent of the value of the work actually done calculated on the basis of the contract price or, if there be no specific price, on the basis of the work actually done. Where such price or value exceeds $15,000 only 15 per cent is to be retained.

A labourer whose lien is for wages has priority to the extent of six weeks' wages over all other liens derived through the same contractor or sub-contractor on the percentage to

be retained, and all such labourers rank equally. Every labourer is entitled to enforce a lien in respect of a contract or sub-contract not completely fulfilled, and may serve a notice of motion on the proper parties, returnable not less than four days after service thereof before a judge, that the applicant will, on the return of the motion, ask for judgment on his claim for lien, registered particulars of which must accompany the notice verified by affidavit. If the contract has not been completed when the labourer makes his claim the percentage is calculated on the value of the work done by the contractor or sub-contractor employing him. Where the contractor or sub-contractor makes default in completing his contract the percentage may not be applied, as against a labourer claiming a lien, for the completion of the contract or for any other purpose. Any device by an owner, contractor or sub-contractor and any payment made for the purpose of defeating the priority given to a labourer for his wages is null and void.

Provision is made for the registration of liens in the forms set forth in the schedule to the Act. Claim for registration is to be made to the Registrar in the Land Titles Office in the Land Registration District in which the land is situated. A lien for wages may be registered at any time during the performance of the work or within thirty-five days or, in the case of wages owing for work in, at, or about a mine, within sixty days after the last work is done for which the lien is claimed.

An unregistered lien ceases to exist at the expiration of the time allowed for registration, and a registered lien at the expiration of thirty days after notice to the lien-holder, unless before the expiration of that period the lien-holder takes proceedings in court to enforce his lien. The court or judge may shorten the period of thirty days. The taking of security or the acceptance of a promissory note or bill of exchange for, or the taking of acknowledgement of, the claim, or the giving of time for payment, or the taking of proceedings for the recovery of a personal judgment for the claim, do not merge, waive pay, satisfy, prejudice or destroy the lien unless the claimant agrees in writing that it shall have that effect. Where such promissory note or bill has been negotiated the lienholder does not lose his lien if he holds such note or bill at the time of beginning proceedings for enforcement of his claim or, where proceedings are brought by another lien-holder, at the time of proving his claim therein. Where the period of credit has not expired or there has been an extension of time for payment of the claim the lien-holder may, nevertheless, if proceedings are commenced by any other person to enforce a lien against the same property, prove and obtain payment of his claim. The lien-holder may inspect the contract or agreement at any reasonable time or, if it be not in writing, obtain information regarding its terms, and may demand of a mortgagee or unpaid vendor the terms of a mortgage or agreement to purchase and the sums advanced and owing. The owner or mortgagee is liable for any loss to the lien-holder caused by his refusal or neglect or false statement. The judge may at any time before or after the commencement of proceedings to enforce a lien, make an order requiring the owner, mortgagee or vendor or the agent of any of them to produce the contract, mortgage or agreement for inspection.

As the object of the Act is to enforce liens at the least expense the procedure set out in the Act for such enforcement is, as far as possible of a summary character. The judge may consolidate several liens into one cause giving its conduct to such plaintiff as he may choose. Upon the hearing of the case the judge is to decide all questions necessary to completely dispose of the case and embody the results in a judgment which may direct payment forthwith by the person or persons primarily liable and execution may be issued therefor. Moneys realized by proceedings are (*a*) to be applied in paying the costs of all lien-holders of and incidental to the proceedings and of registering and proving the lien; (*b*) six weeks' wages (if so much be owing) to all labourers employed by the owner, contractor or sub-contractor; (*c*) amounts owing to other lien-holders other than the contractor; (*d*) the amount owing to the contractor. Lien-holders of each class rank equally among themselves and the portion of the moneys available for distribution to each class is distributed *pro rata* among the lien-holders in that class according to the amounts of their respective claims as proven. Any balance remaining is payable to the owners or other persons entitled thereto. If however, any labourer has more than six weeks' wages owing to him the court or judge will cause the extra sum to be deducted from any sum coming under the distribution of the contractor, sub-contractor or owner owing the wages, and to be paid to the labourer. An appeal lies to the Appellate Division of the Supreme Court from any decision of a court or Judge where the amount of the lien or the total amount of the lien proved exceeds $200. In cases involving less than that amount the decision of the court or judge of first instance is final.

The judges of the Trial Division of the Supreme Court or any two of them may make rules and regulations for expediting and

facilitating business arising under the Act before any Court and for the advancement of the interests of the suitors and may prescribe a tariff of costs which must be submitted to the Legislative Assembly and, until disallowed by resolution of the Assembly, it has the same force as if enacted in the Mechanics' Lien Act. Pending the provision of such tariff the amount of costs is fixed by the judge.

Proceedings under the old Mechanics' Lien Act are continued notwithstanding its repeal by the new Statute.

Companies Act

An amendment to the Companies Act restores a section formerly included in the Act but omitted from the revision of 1929. This section makes directors of companies liable for six months' wages of employees due for services performed while they are directors. No director is liable to an action therefor unless the company is sued within one year after the debt becomes due, nor unless such director is sued within one year from the time when he ceased to be a director, nor unless an execution against the company is returned unsatisfied in whole or in part. The amount unsatisfied in such execution is the amount recoverable with costs from the directors.

Advance Polls in Elections

The Town Act and the Village Act were amended to provide for advance polls in elections. Such polls are to be open for not less than two hours on the Friday and Saturday of the week preceding the election, or such other days as may be directed by the council.

Mothers' Allowances

The Mothers' Allowance Act was amended to provide that a municipality shall not be responsible for contributions in respect of an allowance unless the husband of the woman to whom it is payable had his home in that municipality at the time of his death or committal.

In the event of a dispute arising as to where a man had his home at the time of his death or committal, the district court judge of any judicial district in which any or part of any disputing municipality is situated will decide the question and his decision is without appeal.

Every municipality liable to the province in respect of a mother's allowance upon the last day of March, 1930, continues to be liable as long as the woman in respect of whom the allowance is made continues to have the qualifications which entitle her to apply for such allowance.

Minimum Wages for Women

An amendment to the Minimum Wage Act, which came into force on May 1, 1930, makes the Act applicable to the whole province instead of only to the cities and towns mentioned in the Schedule.

Licensing of Chauffeurs

The Vehicles and Highway Traffic Act is amended to provide, among other things, that a person operating a motor vehicle during the period of suspension of his driver's or chauffeur's licence shall be liable upon summary conviction for a first offence to a penalty of not less than $25 or more than $100 and costs and also to imprisonment for a term not exceeding thirty days. For a subsequent offence the penalty varies from $100 to $500 and costs, and imprisonment for not more than six months.

On March 10, the Legislature unanimously adopted a resolution relating to unemployment insurance, the text of which appeared in the LABOUR GAZETTE for April at page 362.

Regulations of Saskatchewan Workmen's Compensation Board

Additional regulations (33 to 38) have been issued by the Workmen's Compensation Board of Saskatchewan under the Act of 1930, supplementing Regulations 1 to 32, which were published in the LABOUR GAZETTE, April, 1930, page 392.

Regulation 33 amends the classification of industries for the purposes of administration in regard to blacksmith shops, painting and decorating, and quarries.

Regulation 34, which was reproduced in the LABOUR GAZETTE, May, 1930, page 542, relates to the minimum "first aid" kit to be maintained in country elevators and in retail lumber yards outside cities.

Regulation 35 amends the classification of industries by the inclusion of railroad construction, except bridge building.

Regulation 36, amends the classification in regard to the builders' supply industry.

Regulation 37 amends Regulation 15 by adding to the list of occupations excluded from compensation "newsboys employed in delivering newspapers or other publications and newsboys selling upon the streets or elsewhere, newspapers or other publications."

Regulation 38 amends Regulation 15 by adding the following clause: "The sale, distribution, erection, installation, repair or servicing of the apparatus commonly known as lightning rods, and all operations in connection with what is commonly known as lightning rod business in any way connected with the sale, distribution, erection, installation, repair or servicing of lightning rods apparatus."

ASSISTANCE BY DOMINION GOVERNMENT TO MOVEMENT OF CANADIAN COALS

THE Dominion Government during the past month issued four new Orders in Council to provide assistance in the movement of coal produced in Canada. Two other orders were issued in 1928, the numbers of the series being as follows:—

P.C. 439 of 16th March, 1928 (Alberta coal to Ontario).

P.C. 539 of 30th March, 1928 (Maritime coal to Quebec and Ontario).

P.C. 1256 of 5th June, 1930 (utilization of lignite coal in Saskatchewan).

P.C. 1268 of 5th June, 1930 (test movement of Alberta coal).

P.C. 1399 of 14th June, 1930 (use of Canadian coal in Manitoba).

P.C. 1400 of 14th June, 1930 (interprovincial movement of Canadian coal).

Under P.C. 439, 32,064 net tons were moved from Alberta to Ontario from April 15 to July 15, 1928; 37,148 net tons from January 15 to July 31, 1929; and 19,612 net tons from December 1, 1929, to May 31, 1930. (The latter movement continues until July 31, 1930).

Under P.C. 539, a total of 150,812 net tons of maritime coal have been moved under the all-rail rate of $3 per ton to the Province of Quebec. Water-borne coal to St. Lawrence points, transferred by rail to points in Quebec and Ontario where foreign coals compete, amounted to 584,593 net tons. (The movement under this Order continues until March 31, 1931,)

The following account of the circumstances which suggested the adoption of the policy of federal aid in the movement of Canadian coal has been prepared by Mr. F. G. Neate, secretary of the Dominion Fuel Board.

Assistance to Movement of Western Coals

The Hon. Charles Stewart, Minister of the Interior and of Mines, has announced that the Dominion Government will render substantial assistance to the movement of western Canadian coals into home markets where coals imported from the United States have long held an advantage in competition with the native coals of Canada.

An Order in Council has extended for another year the special freight rate of $6.75 per ton for the transportation of Alberta coals to the Province of Ontario where for the past three years coals moved from Alberta under this reduced rate have been replacing United States anthracite. This movement has for its object the furnishing of practical means for determining the lowest freight costs consistent with economic practice at which the coals can move and at the same time encourages the use of Albert coals as a household fuel in Ontario.

Another Order in Council opens the way for Alberta and southeastern British Columbia coals to strengthen their position in the markets of Manitoba. Although the Manitoba markets are geographically within the compass of those Canadian coal mines, United States coals from Pennsylvania and West Virginia aided by extremely low rates for water transportation to the head of Lake Superior have been able to undersell the Canadian coals in such an important industrial market as the Greater Winnipeg area, and this market absorbs close to ninety per cent of the coals sold for industrial consumption in Manitoba. The assistance given respecting Alberta and southeastern British Columbia and which is to apply from June 1st, 1930, to May 31st, 1931, provides for a reduction of one-eighth of a cent per ton per mile from the regular freight rates on coal shipments for industrial consumption and consigned to competitive points in Manitoba. The amount of the reduction is payable directly to the railways by the Government with a view to protecting the railways from any loss that may be incurred. Based on the distances of the different coal mines from Winnipeg the ton mileage reduction in freight rates means that the net freight cost to the shipper for sending western coals to that market will be reduced by amounts varying from $1 to $1.20 per ton, and this it is expected will remove the obstacles to the use of these coals in Manitoba.

In like manner the Government has rendered aid to the lignite coal industry of Saskatchewan. An Order in Council to be effective from June 1, 1930, to May 31, 1931, provides that the Government will pay 50 cents per ton of the freight rates on Saskatchewan lignite coal shipped to competitive points in Manitoba and used for industrial purposes, and by similar authority assistance is given to the transportation of carbonized lignite briquettes, during the same period, consigned to competitive points in Manitoba and used for both domestic and industrial purposes. In the case of the briquettes the reduction is one-fifth of a cent per ton per mile from the regular freight rates but is not to exceed 50 cents per ton. In recent years boiler equipment has been designed to burn efficiently and economically the lignite coals of Saskatchewan which increases con-

siderably the prospects of utilizing them as industrial fuel. The Government has been interested for some considerable time in the question of carbonizing and briquetting lignite coals for domestic use and recently commercial interests have established a carbonizing and briquetting industry in Saskatchewan.

Nova Scotia's Coal Markets

The Nova Scotia coal industry is finding markets which absorb a yearly output of about 7,000,000 tons, and when it is recalled that production only slightly exceeded 5,000,000 tons a few years ago and that the advance was accomplished during a difficult period for the extension of coal markets the achievement reflects not only physical stability within the industry but also enterprise in the important matter of selling the output. Trade conditions in the coal industry throughout the world have been most unsatisfactory for some years past owing to a number of causes. One of these is over-production of coal; another the use of hydro-electric energy, oil and natural gas in place of coal; and a third a decrease in coal consumption as a result of economics in the utilization of coal itself. These conditions are felt in Canada as well as elsewhere because all of them have prevailed here. Furthermore, the Canadian coal industry has had to meet powerful competition from United States coals in the markets of central Canada. Against this competition Nova Scotia has progressed notably in obtaining and consolidating markets which absorb an increasing output of her coal mines.

According to statistics the annual consumption of coal in the three Maritime Provinces at the present time amounts to about 4,400,000 tons and of this consumption about five per cent is imported. Exports outside of Canada of Nova Scotia coal are less than half a million tons. Of utmost importance, therefore, to that coal industry is the St. Lawrence market which now accounts for sales of Nova Scotia coal to the extent of about 2,500,000 tons a year. This market for Nova Scotia coals has existed for more than thirty years, and an outstanding feature in its history, at least from a business point of view, was the recovery from the situation in 1920 when the Maritime coals were all but eliminated by United States competition. Figures for the year 1920 show that Nova Scotia shipped only 13,400 tons up the St. Lawrence that year. That the task of recovering the lost ground was well carried out and progress made despite trying conditions is proved by present yearly sales, as quoted above, of 2,500,000 tons.

10067—3½

Nova Scotia coals have now a wider range of distribution in Quebec and Ontario than at any previous time. New industrial markets have been opened, for instance those on the Saguenay river and in the mining Sections in the northerly parts of both provinces. The assistance granted by the Federal Government's Order in Council on rail shipments inland from St. Lawrence ports, and on shipments transported wholly by rail from Nova Scotia to Quebec when navigation is not practicable, is a further means of enabling coal sales to be made against foreign competition at points whose distance from the ports and the consequent cost of transportation to them formerly left Nova Scotia coals at a disadvantage in the matter of price. Since March, 1928, when the test rates were authorized by Order in Council, the reduction of one-fifth of a cent per ton per mile from the regular freight rate on rail transportation inland from St. Lawrence ports has been applied to the movement of 295,000 tons of Nova Scotia coal, of which slightly over 200,000 tons were moved during 1929.

Before the test rates were authorized transportation of the coal to central Canada was practically confined to the season when the St. Lawrence was open for navigation, that is, there was little or no winter movement. The $3.00 test rate applicable during the closed season of navigation, on rail shipments from Nova Scotia to the Province of Quebec, accounted during the winter of 1928-29 for the movement of 85,000 tons of coal. This aid toward avoiding seasonal interruption in transportation has had a beneficial bearing on industrial conditions at the mines.

Prospects of increasing markets seem well assured when consideration is given to the efforts being made to further the utilization of Canadian coals in central Canada and to the steady expansion of industry going on there. The fact that Nova Scotia possesses a wealth of raw materials and is a great steel manufacturing centre sooner or later must be the means of attracting other industries which will increase the demand for coal in the immediate home market of the mines. The coal mines have reserves sufficient for expansion of output considerably over present production. Excellent harbours supply facilities for both export and domestic trade. If taken only with the natural growth of Canada these factors should mean growing markets for the coal.

The Province of Quebec Safety League recently published Safety Leaflet No. 30, entitled: "Can the smaller plants dispense with Safety Organization?"

CONDITIONS AT THE COLLIERIES AT WESTVILLE, PICTOU COUNTY, N.S.

Report of Provincial Royal Commission

IN the LABOUR GAZETTE for April, page 450, reference was made to the investigation of a commission appointed to deal with conditions in the coal mines of the Intercolonial Coal Mining Company Limited at Westville, Pictou County, Nova Scotia, giving the text of the principal sections of the agreement as to wages and working conditions entered into by the company and its employees as a result of the inquiry of the Commissioner, R.S. McLellan, K.C., of Sydney, N.S. On April 28, the Commissioner made his final report and during June it was issued by the provincial authorities.

The commission, issued June 27, 1929, authorized an inquiry into:—

1. Wages, hours and conditions of employment at the collieries of the Intercolonial Coal Company at Westville, in the County of Pictou.

2. Conditions affecting mine workers while in the course of their employment.

3. All such other conditions and matters, whether of the kind hereinbefore mentioned or not, which directly or indirectly affect the operation of these collieries that may be brought before the Commissioner.

The report relates the proceedings and hearing of evidence between August 15 and October 3, 1929, which were followed by conferences between the representatives of the company and the employees, resulting in the agreement as to wages and working conditions as mentioned above. The report then deals with the grievances of the employees brought up by the Mine Workers Union of Canada, Local No. 50.

On the question of the recognition of the union, the Commissioner found that the greatest cause of difficulty between the company and the employees was the refusal of the management to accept the principle of collective bargaining and to recognize the union, although at the time of the inquiry practically all the employees eligible were members of it; but that the result of the inquiry had been such recognition and the signing of an agreement and the thorough discussion of matters in dispute between the two parties.

Evidence was taken as to operation of the mine and as to allegations that provisions of the Coal Mines Regulation Act were not being observed. The points covered were: underground supervision, defective lamps, travelling slopes, mine cars, stemming clay, allotment of work, rock dusting, supply and distribution of timber, ventilation, etc. On each point the Commissioner recommended that the management give closer attention to and adequately provide for the repair and maintenance of the mine and its equipment and the materials and equipment supplied to the miners with a view to the safety and convenience of the men in their work, in using the travelling slopes, etc., as well as the more efficient operation of the mine. On discrimination in allotment of work, the Commissioner felt that this was due to the company's policy in refusing to recognize the union, leading the employees to believe it was not in their interest to support the union. With reference to enforcement of the mining laws, the Commissioner also recommended "that the Deputy Inspector of Mines for this district satisfy himself by a thorough personal inspection of these mines as to whether or not the provisions of the Act are being complied with and use the authority of his office to ensure to the Westville miners all the protection and safeguards designed and intended for them by the laws of this Province".

Regarding the possibility of developing new mines, the Commissioner stated that he was unable to make a report or recommendation, but referred to the need for new developments on account of the exhaustion of coal areas now being mined in Pictou County and to the possibilities of this being done by operators with large capital.

Coal Statistics for Canada for First Quarter of 1930

The quarterly report on coal and coke statistics for Canada for the first three months of 1930, published by the Dominion Bureau of Statistics, contains the following summary:—

Coal mined in Canada during the first quarter of 1930 amounted to 3,971,808 tons, a decrease of 14 per cent from the output of 4,622,728 tons for the first three months of 1929. Compared with the first quarter five-year average, there was a decrease of approximately 2 per cent during the period under review. Bituminous coal produced during January,

February and March totalled 2,704,147 tons, sub-bituminous 162,612 tons, and lignite 1,105,049 tons. Saskatchewan was the only province to record an increase in output over the first quarter of last year.

Alberta's output of 1,639,324 tons was 41 per cent of the total Canadian production and recorded a decrease of 9.5 per cent from the first quarter five-year average. Nova Scotia's total of 1,513,415 tons and Saskatchewan's total of 174,531 tons were respectively, 11 per cent and 17 per cent higher than the quarterly five-year average. British Columbia mines produced 581,880 tons, a decrease of 14 per cent from the 1925-1929 first-quarter average. New Brunswick's production was slightly higher than the five-year average.

Imports of coal into Canada during January, February and March were 2 per cent less than during the first quarter of 1929, and amounted to 3,308,644 tons consisting of 3,196,982 tons from the United States, 104,526 tons from Great Britain, 7,136 tons from Russia, and 10 tons from Newfoundland.

Anthracite imports totalled 977,606 tons, including 870,247 tons from the United States, 100,223 tons from Great Britain, and 7,136 tons from Russia. Bituminous coal received during the period totalled 2,325,338 tons, consisting of 2,321,025 tons from the United States, 4,303 tons from Great Britain and a small shipment from Newfoundland.

Canadian coal exported during January, February and March amounted to 152,987 tons as compared with 240,113 tons in the same period of 1929. Exports through the ports of Nova Scotia, New Brunswick, Quebec and Ontario totalled 58,829 tons as against 97,607 tons during the first quarter of 1929, while Manitoba, Saskatchewan, Alberta and British Columbia ports cleared 94,158 tons as compared with 142,506 tons in the corresponding period of last year.

Coal made available for consumption in Canada during the period, computed from output, imports and exports data, was 7,127,475 tons or 8 per cent lower than the tonnage for the first quarter of 1929.

The usual seasonal variation was shown in employment in Canadian coal mines; the average number of men employed in January was 30,839, in February 29,275, and in March 26,978. The average tonnage raised per man during the period was 138 tons, making an average output per man-day of 2.44 tons.

Number of Employees in the Coal Mines of Canada by Provinces

Province	January, 1930			February, 1930			March, 1930		
	Surface	Underground	Total	Surface	Underground	Total	Surface	Underground	Total
Nova Scotia	2,294	11,034	**13,328**	2,301	10,896	**13,197**	2,269	10,914	**13,183**
New Brunswick	124	484	**608**	125	487	**612**	123	470	**593**
Saskatchewan	138	584	**722**	131	497	**628**	113	388	**501**
Alberta	2,665	8,375	**11,040**	2,412	7,370	**9,782**	2,224	6,367	**8,591**

MINING IN BRITISH COLUMBIA IN 1929

THE annual report of the British Columbia Bureau of Mines, recently published, gives a statistical review of the mineral industry of that province during 1929. It details the progress of mining development and prospecting, the tables indicating the mineral production by districts and divisions during the year, together with comparative figures for previous years. Included also are the reports of the resident mining engineers, and the reports of the inspectors of mines.

The provincial mineralogist states that the steady progress that had characterized mining in the province in recent years was again shown in 1929. During the year the mining industry established a new high record in the gross value of mineral production, which amounted to $68,245,443. This figure is $2,872,860 greater than the value of the output in 1928, or 4.4 per cent, while it is 1.6 per cent higher than the previous record production in 1926.

The tonnage of metalliferous ore mined in the Province during the year was 6,977,681 tons, as compared with 6,241,310 tons in 1928, an increase of 11.8 per cent. This increase was almost entirely due to larger tonnages mined at the Sullivan and Britannia mines. Slightly lower-grade ore was handled at these properties, so that the metal production from them was approximately the same as in 1928. The average gross value of the ore mined in the Province in 1929 was approximately $7.35 a ton, as compared with $7.75 a ton in 1928.

The mineral production of the province is divided into four classes—metal-mining, coal-mining, structural materials, and miscellaneous

metals and minerals. Of these, the first class is by far the most important, with a production for 1929 valued at $51,293,570 (including placer gold). This is followed by coal, with an output valued at $11,256,260, and structural materials and miscellaneous metals and minerals, totalling together $5,695,613. By value, the various products of the mineral industry produced in 1929 are ranked in the following order: Copper, lead, coal, zinc, silver, structural materials, gold, miscellaneous metals and minerals.

The quantity of copper produced was 101,483,857 pounds, which is a new high record and the first time that the output has been in excess of 100,000,000 pounds; the valuation at $18,375,682 is also a record figure.

The output of lead in 1929 was 302,346,268 pounds, or only slightly less than in 1928. Owing to a higher market price for lead, the value of production at $15,269,696 was more than a million dollars greater than in the preceding year.

The output of zinc in 1929 was 172,096,841 pounds, valued at $9,268,792, which compares with 181,763,147 pounds, valued at $9,984,613 in 1928. A record output of zinc in 1929 was expected but it was stated that curtailment of mining operations at some properties and the storage of zinc concentrates by others in the last two months of the year reduced the estimated figure considerably.

The production value of lode gold in 1929 amounted to $3,004,419 as compared with $3,888,097 in 1928, a decrease of 22.7 per cent. The decrease was attributed chiefly to a lower production from the Premier mine.

Placer-gold output also decreased, the value being recorded at $118,711 as compared with $143,208 in 1928—a decline of 17.1 per cent.

Structural materials produced in 1929 were valued at $3,921,768 an increase as compared with 1928 of $513,082, or 15 per cent.

The output of miscellaneous metals and minerals continued to show in 1929 the rapid growth that has characterized this branch of the industry in recent years. A value of $1,773,845 was recorded for 1929, as compared with $905,354 in 1928 and $459,514 in 1927. The output has therefore been approximately doubled in each of the last two years. Continued expansion of this branch of the industry is expected, as there are many deposits of such materials that will gradually be utilized in provincial industries.

The coal production for the year is valued at $11,256,260, as compared with $12,633,150 in 1928, a decrease of $1,376,890, or 10·9 per cent. The decrease was general in all districts in the Province. It is stated that the decline in coal output does not indicate a lessened fuel consumption in the Province, but shows the further inroads being made in the provincial coal industry by imported fuel-oil and imported coal, the latter particularly from Alberta.

Labour and Employment

During 1929, the total number of workers employed in the mineral industry was 15,565. Of this number, 5,028 were employed in or about coal mines; 4,978 in lode mining; 2,948 in smelters; 966 in concentrators; 492 in quarries; 544 in structural material plants; 341 in placer mining; and 268 in miscellaneous mineral work. In coal mining there were 2,033 employed underground and 714 above ground.

The collieries were practically free from labour disputes during the year, the only lost time being due to lack of trade. The mines on Vancouver Island lost about 20 per cent of working days through this cause. In the Nicola-Princeton district, the different collieries worked from 84 to 90 per cent of the working days, averaging for the district about 88 per cent of the working days. The mines in the East Kootenay district worked from 72 per cent at the lowest to 87 per cent at the highest of the working days during the year—an average for the whole district of about 77 per cent of the time.

Accidents.—During 1929 there were 12 fatal accidents in and around coal mines as compared with 14 for 1928. Of these, 6 were caused by falls of rock and 6 by mine cars and haulage. The ratio of fatal accidents per 1,000 persons employed was 2·38, as compared with 2·64 in 1928. In 1927 the ratio was 2·10; in 1926, 1·88; in 1925, 1·10; in 1924, 1·66; in 1923, 7·32; in 1922, 4·66; in 1921, 1·45; in 1920, 2·67; the average for the ten-year period being 2·86. The number of fatal accidents per 1,000,000 tons produced during 1929 was 5·33; during 1928 the fatalities per 1,000,000 tons mined was 5·54; in 1927, 4·48; in 1926, 4·3; in 1925, 2·45; in 1924, 4·52; in 1923, 1·76; in 1922, 12·01; in 1921, 3·98; 1920, 6·30; the average for the ten-year period being 6·76 per 1,000,000 tons of coal mined.

There were 14 fatal accidents during the year in and about metalliferous mines. This is the same total as the previous year. According to causes, the accidents were listed as follows: Falls into chutes, 4; falls of ground, 4; haulage, 3; and blasting, 3. The tonnage mined per fatal accident was 498,406 in 1929 as compared with 445,807 in 1928. The tonnage mined per fatal accident during the last ten-year period was 433,624.

Mine Rescue and First Aid.—The chief inspector of mines reported that during the year there were five prosecutions for infractions of

the Coal Mines Regulation Act and special rules, all of which resulted in convictions. He describes the first aid and accident prevention work, and states the results of the mine rescue and first aid competitions. Regular training in the use of self-contained rescue apparatus was carried on during the year by experienced crews of the government rescue stations at Nanaimo, Cumberland and Fernie, and a large number of men went through the training course to qualify for certificates in this work. All the larger operating companies have carried on or inaugurated accident-prevention work during the year. In the case of the larger mines a safety-first engineer devotes all his time to the promotion of safety methods of performing the work both under ground and above.

During the year mine-air samples were taken in all mines where it was thought necessary to ascertain the conditions of the atmosphere. The samples were sent to the Mines Branch, Ottawa, for analysis, and only in a few cases was the oxygen content found to be below normal, no appreciable amount of noxious gases being found.

ANNUAL REPORT OF DEPARTMENT OF MARINE

THE sixty-second annual report of the Department of Marine and Fisheries (Marine Branch) recently published, contains a detailed review of its varied activities during the fiscal year 1928-29. Included in the publication are comprehensive reports of agencies, harbour commissions, the Board of Steamboat Inspection, Canadian Government Merchant, Marine, shipbuilding operations, activities of Hydrographic Service, Lloyd's returns, Meteorological Services, pilotage, radio branch operations, St. Lawrence ship channel, etc. General statistics are also presented showing shipbuilding activities in various countries. These indicate that in 1928 Great Britain and Ireland contributed 53.6 per cent of the world shipbuilding.

As regards the Canadian Government Merchant Marine, it was stated that the net operating loss for 1928 was $1,209,083 as compared with $720,735 for 1927. This adverse showing was attributed largely to reduction in rates, increased competition on certain routes, the Antwerp strike during the summer months, and reduced buying power in South Wales due to the limited coal mining operations. Study is being given to the reorganization of certain services looking to securing better results in future.

A statement is given showing the operations of the chief Canadian shipbuilding plants in 1928. Tabular statistics indicate that the total number of vessels built in Canada and registered in 1928 was 343. These had a gross tonnage of 32,684. The total number of sailing vessels on the registry books of the Dominion as at December, 31, 1928, was 3,337, and the gross tonnage of such ships was 525,754. On the same date there were 5,308 registered steamships in Canada with a gross tonnage of 1,533,810. It is estimated that 44,872 men and boys, inclusive of masters, were employed on ships registered in Canada during the year 1928.

Masters and Seamen Branch.—According to the report of the superintendent of the Masters and Seamen Branch, navigation schools were in operation at Saint John, N.B., at Halifax and Yarmouth, N.S., at Quebec, P.Q., at Prince Rupert, B.C., and at Kingston, Ont., and marine lectures were delivered at Collingwood, Ont., and at Vancouver, B.C. Examinations for masters' and mates' certificates were held at Halifax, Yarmouth and North Sydney, N.S., at Borden, P.E.I., at Saint John, N.B., at Quebec and Montreal, P.Q., at Ottawa, Kingston, Midland, Toronto, Collingwood, Port Arthur and Kenora, Ont., at Selkirk and Winnipeg, Man., at Prince Rupert, Vancouver and Victoria, B.C. There were issued during the year, 34 masters', 6 mates', and 11 second mates' sea-going certificates of competency; 83 masters' and 120 mates' coasting certificates of competency; 39 masters' and 78 mates' inland waters certificates of competency; 28 masters' and 12 mates' minor inland waters certificates of competency, and 40 masters' temporary certificates. There were 28,748 seamen shipped, and 25,763 seamen were discharged at sea ports.

Pilotage.—The report of the pilotage director covers the various districts in which pilots operate. On March 31, 1929, pilots and apprentices numbered as follows:—District of Quebec, 48 pilots and 19 apprentices; District of Montreal, 58 pilots and 19 apprentices; District of Saint John, 11 pilots and 2 apprentices; District of Halifax, 20 pilots and 3 apprentices; District of Sydney, 17 pilots and no apprentices. The gross earnings of pilots in these districts during the period under review were as follows: District of Quebec, $304,590.95; district of Montreal, $329,282.72; district of Saint John, $54,843; district of Halifax, $102,229.53; district of Sydney, $60,360.35. In all these districts there is a pension fund for pilots and a percentage (5 per cent at Montreal and Halifax, 7 per cent at Quebec, 12 per cent at Saint John, and 15 per cent at Sydney) is deducted from gross earnings and placed in the respective funds.

LABOUR AND INDUSTRY IN ONTARIO IN 1929

Tenth Annual Report of the Provincial Department of Labour

THE tenth annual report of the Ontario Department of Labour, recently published, reviews industrial conditions in the Province during the fiscal year ending October 31, 1929 and outlines the activities of the department in the administration of the legislation under its jurisdiction, including the following Acts: the Sanitary and Hoisting Engineers' Act; the Factory, Shop and Office Building Act; the Employment Agencies Act; The Steam Boiler Act; the Apprenticeship Act. The operations of the Ontario Government Offices of the Employment Service of Canada are also described.

Citing the employment index number prepared by the Dominion Bureau of Statistics, the report emphasizes the increase in employment in the province during the fiscal year 1929, pointing out that for the four years ending in 1929 progress in this respect was uninterrupted, each month showing an advance as compared with the same month of the previous year, while on October 1, 1929, the index number reached its maximum of 128.4 or 8 points higher than in the same amount of 1928. Referring to the new base of 100 for the calendar year 1926, adopted in connection with the employment index by the Dominion Bureau of Statistics, the report points out that on this basis the volume of employment for the fiscal year 1929 would be represented by an index number of 122.7 as compared with 112.6 for 1928, or an advance of 10.1 points. The expansion reported on May 1, 1929, was the greatest on record, indicating an addition of 22,355 persons to the working forces of the firms reporting, bringing the index number more than 13 points higher than at May 1, 1928. The increased activity at this time was most pronounced in manufacturing, especially iron and steel, construction and transportation. As compared with 1928, the greatest advance in the index number for the year 1929 was in the services group, which gained over 21 points. The increase in tourist traffic during the summer and autumn accounted largely for this activity affecting the hotel and restaurant division, and from July 1 to October 1, the index number remained above 160.

Factory Inspection.—The Factory Inspection Branch reported greater industrial activity during 1929 than in any year since 1920. A total of 17,944 inspections and visits were made by the inspectors, and in the factories, mercantile establishments and office buildings inspected 319,646 persons were employed, as compared with 313,595 in 1928. Altogether, 6,839 orders relating to various requirements of the Factory Shop and Office Building Act were issued. It was necessary to take proceedings against two firms for violation of the Act, fines being imposed in both cases. Reports of 1,277 violations of Acts in the enforcement of which the inspectors have a responsibility were submitted, the majority of which were due to negligence in connection with orders of the Minimum Wage Board. In addition there were 120 complaints received during the year. Upon investigation, 58 were upheld, 43 were not upheld, 17 are pending investigation, and 20 did not come within the jurisdiction of the branch. Of the total number of complaints, the chief causes were as follows: hours of labour, 36; overtime, 15; ventilation, 11, lavatories, 10; heat, 8; sanitation, 6. There were 1,496 permits issued for overtime and other reasons.

Employment.—The accompanying tables show the number of employees by sex and age in industrial and mercantile establishments and office buildings, together with hours of work, during 1928 and 1929.

NUMBER OF EMPLOYEES IN FACTORIES IN ONTARIO

Employees	1929	1928
Males over 16	240,173	226,331
Males 14–16	653	556
Females over 18	75,557	81,737
Females 14-16	3,263	4,971
Children under 14 dismissed	50	24
	319,646	313,595

HOURS OF LABOUR IN FACTORIES IN ONTARIO

Males	Number of Employees
45 hours per week	88,855
50 hours per week	59 918
54 hours per week	40,338
58 hours per week	5,719
60 hours per week	25,946
Females	
45 hours per week	43,176
50 hours per week	18,118
54 hours per week	7,567
58 hours per week	916
60 hours per week	3,931

In addition to the numbers in the above table there were also 25,162 employees, male and female, working approximately 50 hours per week.

The Examiner of Reports and Designs who is attached to the Factory Inspection Branch, and whose duty it is to examine all plans for new buildings to be used for factories, shops and office buildings, and for alterations to such existing buildings reported that during 1929 the number of plans submitted and the value of buildings represented were considerably in excess of any previous year. In 1929 the value of such building was $36,588,950 as compared with $32,614,300 in 1928; and $8,250,000 in 1924. The safety factor in the proper planning of stairways is emphasized as follows: "The proper planning of a stairways is an important factor in a building demanding the most careful consideration, as records show that a surprisingly large number of accidents occur through falls on stairs. 'Winders' in stairs lead almost invariably to falls and, although the use of them has been condemned by all competent authorities for years, they still appear in plans of important buildings."

Accidents.—In dealing with accidents to industrial workers, the report of the chief inspector of factories reports 7,083 which occurred within his jurisdiction during the year. Of this number, 63 were fatal, as compared with 35 fatalities out of a total of 5,809 accidents in 1928. Of the total of 63 fatal accidents 10 were caused by falls; 9 by falling substances; 6 by explosions and 6 by burns. Non-fatal accidents showed an increase of 1,274 as compared with 1928. The chief inspector comments as follows on accidents: "It is claimed that ninety-five per cent of all accidents in factories and workshops can be placed in two categories; those caused by a lack of proper safeguards and good housekeeping and those caused by inattention on the part of the worker. It is estimated that hundreds of accidents occur to workers tending machines whose minds are probably centered on illness at home or some other uneasiness of mind that causes unhappiness. But even those accidents can be almost eliminated if employers would put into operation all the known devices for making a machine reasonably safe."

Employment Service.—That "the fiscal year ending October 31, 1929, was the best, judged from an employment standpoint, since the Ontario Employment Services were organized in 1916" is the declaration of the general superintendent in his annual review which is incorporated in the report. It is stated that during the year work was more plentiful in the province than ever before, and the industrial activity was reflected in the increased number of workers asked for by employers and in the increased number of placements made by the Service. The vacancies listed with 26 offices of the Service totalled 156,995 in 1926; 159,729 in 1927; 175,870, in 1928; and 182,620 in 1929. This increase in the number of vacancies was paralled by an increase in the number of applications, the figures for 1928 and 1929 being 212,422 and 223,600. These parallel increases were regarded as indicating that the Public Employment Service is not only maintaining the confidence of employers but that its usefulness is being fully appreciated by the workers. The placements also increased each year from 135,331 in 1926 to 159,519 in 1929. The latter figure represents the highest point reached in any year since the offices were opened. Two thirds of the jobs, 102,473, were of more than one week's duration; the remainder, 57,046, were of a casual nature.

In the Handicap Section of the Toronto office (where employment opportunities are looked after on behalf of disabled ex-service men and others crippled by injuries) 3,820 placements were made, of which 1,000 were of a regular nature and 2,820 for casual work. This total shows an increase of approximately 11 per cent as compared with 1928, and 87 per cent of the men placed were disabled ex-soldiers. There were altogether 804 new applicants.

Private Employment Agencies.—When the public employment service was organized in Ontario in 1916 there were 99 private employment agencies in the province. This number has been reduced to 14. These private agencies are licensed under the Ontario Employment Agencies Act, and are under the supervision of the Department of Labour. During 1929 these 14 private employment agencies reported a total of 41,786 placements.

Stationary and Hoisting Engineers.—In explaining the protection afforded to employers in efficiency and to the public in safety, the Board of Examiners of Stationary and Hoisting Engineers outlines the system whereby such engineers are licensed and graded according to degree of technical knowledge and practical proficiency. In this respect, the Board sets forth the benefit of the system as follows: "Engineers of the higher grades only are qualified for posts involving the greater responsibility and consequently higher remuneration, while the engineers in the lower grades have opportunity for improving their status through experience, study and examination. The graded certificate is a guide to employers in the choice of men to take charge of their power plants, and there is among them a tendency to employ men holding certificates of higher grade than is re-

quired by the Act in order to secure a high degree of efficiency and economy. Greater safety is secured for the general public in the protection of life and property."

During the fiscal year 1929 a total of 16,037 certificates were issued by the Board, as compared with 16,625 in 1928. Of this number 1,705, or 332 more than last year, were issued upon examination, 26 were provisional certificates, 34 duplicate and 124 were plant owners' registration certificates. All of these showed advances over last year, the decrease occurring in the renewal of certificates which numbered 14,149 as compared with 15,085. The candidates examined totalled 2,055, an increase of 204 over last year, and examinations for 727 of these were held at the office of the Board in Toronto, the balance of 1,328 being examined at convenient centres throughout the Province. Of the 2,055 candidates, 1,094 wrote the examination for fourth class; 407 for third; 139 for second; 56 for first class certificates; 164 for hoisting and 195 for portable engineers' certificates. The net revenue of the Board for the year amounted to $24,830.77 as compared with $23,474.02 or an increase of $1,356.75.

Steam Boiler Branch.—A continued increase in every division of the work of the Steam Boiler Branch was reported for the year 1929. Special activity was indicated in the increased number of pressure vessels constructed from designs approved by the Branch, a total of 831, or 249 more than last year. Consequently a greater number of drawings and specifications were surveyed and registered, 624 as compared with 567. The number of pressure vessels inspected when repaired, sold or exchanged, including 763 annual inspections of boilers and pressure vessels, totalled 1,636 as compared with 1,566 in 1928 and altogether 3,862 certificates were issued during the year. This general increase in the volume of work of the Branch resulted in an increased revenue, which amounted to $25,167.15 as compared with $22,152 for the previous year.

Apprenticeship Branch.—Included in the Department's report is the first annual review of the Apprenticeship Branch which details the work involved in putting into operation the Apprenticeship Act. In reviewing the administrative work of this branch the report states that in addition to the Inspector of Apprenticeship, Mr. A. W. Crawford, B.Sc., five district inspectors and one assistant district inspector have been appointed to organize the work in the larger centres and co-operate with local advisory committees in carrying out the provisions of the Act and Regulations. A survey of the building trades has been undertaken for the purpose of securing the registration of all minors employed in designated trades and various means have been taken to inform employers and the general public of the requirements of the Apprenticeship Act and Regulations, and the work that has been accomplished by this Branch. Requests for such information have been received from all parts of the Dominion, the British Empire and the United States of America. It is also pointed out that a full measure of success in the administration of this Act may be attained only through close co-operation between employers, employees and the Inspector of Apprenticeship, and it it stated that the progress in this respect during the year has been most gratifying.

At the end of the fiscal year 1929 the number of apprentices who had registered totalled 1,078, of which 29 were registered previous to the beginning of the year and 1,409 during the year. Of this total, 19 were cancelled and 31 completed during the year, leaving 1,028 active contracts at the end of the fiscal year. The distribution of these 1,028 apprentices among the designated trades is as follows: Bricklaying, 126; masonry, 5; carpentry, 116; painting, 38; plastering, 69; plumbing, 322; steamfitting, 110; sheet metal, 91; and electrical, 151. According to districts the distribution is as follows: Toronto district, 527; Hamilton, 227; Ottawa, 83; London, 53; Windsor, 52; Central, 43; and Northern, 43.

The Late James L. Sugrue

Mr. James L. Sugrue, a member of the Workmen's Compensation Board of New Brunswick, passed away on June 24, after an illness of more than two years. The late Mr. Sugrue had been prominent in social and labour affairs in the province for many years. A carpenter by trade, he was past president and secretary of the Saint John Trades and Labour Council, and on two occasions was labour candidate for the position of City Commissioner. In 1914 he organized the New Brunswick Federation of Labour and was its president and legislative representative from the time of its organization up to 1918. When the New Brunswick Workmen's Compensation Act was passed—he became a member of the board, representing organized labour.

REPORT OF BRITISH MINISTRY OF LABOUR FOR 1929

THE annual report of the British Ministry of Labour, outlining the work carried on during, 1929, was published recently. Its main sections deal respectively with employment and unemployment insurance; training for employment; juveniles; industrial relations; trade boards; labour statistics, and international labour.

Employment.—The average percentage of unemployment among insured persons in Great Britain in 1929 was 10.4 as compared with 10.7 in 1928. The outstanding feature during 1929 was the decided improvement in the coal mining industry, though unemployment was still high. The average number of unemployed insured persons in this industry was 177,248 in 1929, compared with 252,364 in 1928. The most unsatisfactory feature was the increased slackness in the textile industries. Cotton exports showed a marked decrease as compared with 1928, and there was a considerable falling off in employment in the woollen and worsted trade. The figures for the textile trades as a whole showed that the number of workers unemployed during 1929 averaged 154,175, as compared with 133,427 in 1928.

If industry is surveyed as a whole, however, a general increase in employment is shown over the year; this appears not only from the unemployment percentages, but also from the continuous growth in the working population of the country. An analysis by districts of the unemployment figures affords further evidence of the more active employment market in the south of England.

The number of vacancies filled by the employment exchanges, viz., 1,554,433, was the highest figure yet reached. The trade groups in which the largest number of vacancies for men were filled by employment exchanges were: building; general labourers; public works contracting; transport trades; and engineering, in the order named. These five groups accounted for about 60 per cent of the total number of men's vacancies filled. Other trade groups with more than 20,000 men's vacancies filled were: commercial occupations; shipbuilding; mining and quarrying; agriculture; domestic service; gas, water, etc., in the order named.

The trade groups in which the largest number of women's vacancies were filled were: domestic service; cotton; dress; commercial occupations; and miscellaneous textiles, in the order named. Domestic service alone accounted for over 40 per cent of the women's vacancies filled.

Training for employment.—For the training of young unemployed men, the Ministry's scheme provides two distinct types of training, one for home employment and the other for employment oversea. The object on the home training side is to provide a course of instruction or training which will enable an unemployed man to obtain and to hold industrial employment; whilst on the oversea side it is designed to provide an elementary knowledge of agricultural work for those who wish to settle in the Dominions, and to test their fitness, temperamentally and physically, for their new work.

The Canadian authorities, it is stated, had intimated that they could provide openings during 1929 for 6,000 men, and in order to meet this contingency a further five centres were opened, providing a course of four weeks' duration, at which testing, rather than training, was the chief aim. It became clear, however, as the year advanced, that the figure of 6,000 was likely to be in excess of Canada's requirements; the short courses of training were suspended, and the men in training were transferred to the long courses. In addition to the 3,428 men who went to Canada in 1929 after a course of training at the Ministry's training centres, 680 men went to Australia after training. During the year, 4,456 men completed training in the various oversea training centres, making a total of 7,657 since the opening of the centres.

Training facilities for home employment were considerably extended during the year 1929. Centres are now established at Birmingham, Wallsend, Dudley, Bristol, Glasgow, Park Royal, Slough, and Watford; and a certain number of men for home employment are also received at the farm training centres at Claydon, Brandon, and Carstairs. The total number admitted to training at all the home training centres from the time of their establishment to the end of 1929 was 16,118, of whom 13,429 passed through the centres. Of these 11,515 completed their training or were placed in employment during the course; and 10,823 men passed into employment. The report suggests that the training scheme has demonstrated the possibility of increasing a man's prospects of employment by giving him some technical equipment. But for the existence of the scheme there is no doubt that the majority of the men trained had no prospect beyond irregular employment in general labouring or other unskilled work.

The Central Committee on Women's Training and Employment throughout the year provided home training facilities for unemployed women and girls at 39 centres, the majority of which were situated in depressed areas. In all, 2,770 women and 1,519 girls received training during the year, and the number in training on December 28, was 905. The normal course lasted three months, and covered instruction in cookery, housewifery, laundry and needlework. An innovation during 1929 was the admission of a limited number of girls between 15 and 16 years of age to home training centres under special conditions.

Juveniles.—The gradual reduction, resulting from the falling birth-rate during the war, in the number of boys and girls between the ages of 14 and 18 available for employment continued to make itself felt during the year. The decrease in 1929, however mainly affected the 14 year age-group; and the number of juveniles of insurable age remained approximately the same as in 1928. As in the year 1928, the percentage of unemployment amongst insured juveniles was much lower than among adult insured persons (3.3 against 11.0). The distribution of unemployment amongst boys and girls varied widely according to the locality.

The Junior Instruction Centres were conducted on the same lines as in 1928. The athletic side of the activities of the centres has been developed, and one centre ran a successful holiday camp during the summer vacation. A noticeable feature during the year was the increase in the proportion of those who attended the centres voluntarily (i.e., not as a condition for the receipt of unemployment benefit).

Industrial Relations.—As a result of the discussions that took place during 1928 between the General Council of the Trades Union Congress and a representative group of employers, a general committee was set up representing the General Council, the Federation of British Industries, and the National Confederation of Employers' Organizations, to consider how far the three bodies might usefully consult together upon matters of common interest to British industry. Proposals to this end were finally agreed upon by the committee, adopted by a full conference, and subsequently approved by the governing body of each of the three organizations (LABOUR GAZETTE, October, 1929, page 1099).

PROPOSALS OF AMERICAN FEDERATION OF LABOUR FOR DEALING WITH UNEMPLOYMENT

PRESIDENT William Green, of the American Federation of Labour, giving evidence before a committee of the United States Senate during April, made the following suggestions for the prevention and cure of unemployment.

1. *Fact finding.*—No basic plans can be developed before actual conditions are known and a complete picture of unemployment obtained. Facts may be secured from three principal sources:—

(a) The Federal unemployment census already undertaken. The enumeration of the unemployed should also be made a regular part of every decennial census.

(b) To supplement the census data there should be a national clearing house for current information on unemployment, such as could only be made available through an adequate Federal employment service. In addition special studies of unemployment should be made from time to time for the discovery of trends.

(c) Employment data should be assembled and published by one Federal agency. Various departments are at present gathering this information for some industries. The compilations now made are based on payrolls and do not show the full extent of unemployment, as part-time employment is not considered nor is the number of man-hours worked given.

2. *Federal employment service.*—An adequate Federal employment service must establish standards and practices for local agencies. This national service should have an advisory council in which both labour and management should be represented.

3. *Deferred programs for public construction.*—These should be planned to offset cyclical unemployment. Although such a program has been before Congress and has been discussed at length for years, the recent 1929 depression "came upon us without provision for initiating a constructive program, together with the machinery for putting it into operation."

4. *Special employment counsel and vocational training opportunities.*—These are needed for workers dismissed because of technological changes.

5. *Job analysis.*—Job analyses should be made to ascertain job requirements, in order

to find suitable employment for older workers. There has been discrimination against such workers through hiring policies which favour younger workers and without due regard to needed qualifications.

6. *Stabilization.*—Industry must meet its responsibility for its workers by fair wages and hours. The major responsibility for planning the regularization of production rests upon management; unions, however, have aided substantially in such plans. The possibilities of stabilization have been demonstrated by certain progressive industries. The Baltimore & Ohio Railroad and the railway shopmen recently signed an agreement to co-operate in the regularization of employment. In the construction industry, a marked advance has been made along this line, seasonal factors having been offset by new materials and new methods.

(a) When, however, seasonal fluctuations can not be completely overcome, arrangements should be made between management and the workers to establish incomes on an annual basis.

(b) It is also suggested, in the case of employment irregularities which the industry is unable to eliminate, that hours be still further cut and the work apportioned among the staff in order that none may be obliged to have recourse to charity. "There is a moral obligation on the part of the employer to tide these men over."

Plants and raw materials are useless without human workers. "Too many managements get from under the consequences of bad management, unwise sales and buying policies, business depression, etc., by charging the losses to workers in the form of wage reductions and lay-offs."

7. *Unemployment insurance in industry.*—"If there was not such relentless warfare made upon trade-unions by corporations and large employers of labour there could be developed through collective actions forms of unemployment insurance which would result in tiding the employees over these periods of seasonal unemployment." In certain industries where trade-unions do function, plans of this kind have been jointly worked out and are now in operation.

8. *Steady increases in income.*—Steady increases in wage earners incomes are necessary in order that there may be purchasers for the greater industrial and agricultural output. "High wages are a sustaining element in prosperity and prevention of unemployment."

9. *Steady adoption of 5-day week.*—Referring to his various recommendations made for coping with unemployment the president of the American Federation of Labour said: "I think it all ought to be supplemented by a reduction in the hours worked per day and in the days worked per week. I think the 5-day work week ought to be established universally."

United States Employers' Remedies for Unemployment

A report on public unemployment insurance recently made by a joint committee of the National Association of Manufacturers and the National Industrial Council, expresses the view that before such a government scheme is undertaken it would be wise to consider a further application of existing methods of solving the problem of unemployment. Eight such methods are now in use in various localities, and, in the committee's opinion, they should be given further trial in a wider field. These eight methods are as follows:—

1. Unemployment insurance by companies for their own employees. Ten such schemes are now in operation in the United States, besides the following employer-union unemployment insurance plans at persent functioning, those covering the Chicago Amalgamated Clothing Workers, the Cleveland Ladies' Garment Workers, and the Workers in the lace industry of Kingston, Scranton and Wilkes-Barre, and in the New York cloth hat and cap industry.

2. A growing number of industrial undertakings pay a so-called "dismissal wage" to employees who have served for a long period, but are not old enough or have not been employed long enough to be eligible for the regular company pension.

3. Stabilization of industry and employment, it is declared, may be accomplished even in industries formerly considered as being seasonal.

4. Federal, State, and municipal governments should adopt the plan of ordering public works so that they will serve as a "buffer" during periods of unemployment.

5. Business stability would result from regularizing the purchasing power of the dollar.

6. Unemployment insurance might be carried by insurance companies.

7. Elimination of local taxes.

8. Payment of higher wages in certain industries to offset the seasonal nature of employment.

RECENT LABOUR CONVENTIONS

Division No. 4, Railway Employees' Department, American Federation of Labour

THE eighth biennial convention of Division No. 4, Railway Employees' Department, American Federation of Labour, was opened at Winnipeg, on June 9, 1930, with 216 delegates present, representing approximately 35,000 workers. President R. J. Tallon, Montreal, presided over the various sessions of the convention, at which representatives of the following international craft organizations were present: Machinists; Boilermakers; Blacksmiths; Firemen and Oilers; Electrical Workers and Sheet Metal Workers. President B. M. Jewell, of the Railway Employees' Department, American Federation of Labour, was also present. An official welcome was extended to the delegates by Colonel Webb, mayor of Winnipeg, and by the Hon. John Bracken, Premier of Manitoba.

Resolutions were adopted as follows:—Demanding a 40-hour week with 48 hours pay in the next wage agreements.

Instructing the negotiating committee to press for time and one-half pay for work done on Sunday and assigned day off.

In favour of the abolition of piece-work on roads where that practice still exists.

Seeking continuity of employment for shopmen.

Asking the Canadian Pacific Railway Company to discontinue the practice of laying-off large numbers of men periodically.

Reindorsing the union-management co-operative policy.

Recommending that all railroad work be done in railroad shops.

Favouring an efficient system of unemployment insurance.

In favour of payment of standard wages in all contracts for equipment awarded by the Canadian National Railways.

Recommending affiliation with the International Transport Workers' Federation at Amsterdam.

Favouring a reduction in the number of apprentices and lengthening the period of train-in.

Favouring two weeks' annual vacation with pay.

Protesting against the practice of patriotic and welfare organizations in bringing immigrants to Canada upon the promise that they would be taken care of.

In the election of officers, Messrs. R. J. Tallon, Frank McKenna and Charles A. Dickie were unanimously re-elected president, vice-president and secretary-treasurer respectively.

The next convention of Division No. 3 will be held in Toronto in 1932.

Ontario Provincial Council of Carpenters

The annual convention of the Ontario Provincial Council of Carpenters was held at Hamilton on June 26, 1930, with thirty delegates present, representing locals from various parts of the province. Included among the visitors were Messrs. George L. Lakey, first general vice-president, United Brotherhood of Carpenters and Joiners; Arthur Martel, general executive board member for Canada; James Marsh, general representative; E. O'Dell, representative of the Boot and Shoe Workers' Union, and Fred. Molineux, of the Brotherhood of Painters, Decorators and Paperhangers of America.

The delegates were welcomed by Albert Blythe, on behalf of the local carpenters, Mayor Peebles, on behalf of the City of Hamilton, and Fred. Maxted, on behalf of the Hamilton Trades and Labour Council. Others who addressed the delegates at the opening session were Controller Sam Lawrence and Alderman Humphrey Mitchell, chairman of the Ontario executive of the Trades and Labour Congress of Canada.

Mr. A. E. Crawford, Inspector of the Apprenticeship council of Ontario, informed the delegates that the Council had under its jurisdiction 1,325 apprentices representing 9 different trades, 254 of these being carpenter apprentices. At the close of his address, Mr. Crawford presented a cheque on behalf of the Hamilton District Council of Carpenters, to Leonard George Lawrence, an apprentice,who had received the highest marks for progress and efficiency during the past year. Mr. Lawrence was also presented with a case of drawing instruments from the Provincial Council.

The executive in their report recommended a shortening of the hours of labour to meet the situation caused by the introduction of improved machinery resulting in the elimination

of labour. Unemployment insurance was also advocated for periods of depression.

Secretary-treasurer Jackson in his report showed that the members in good standing in the province numbered 3,344, with approximately 830 in arrears owing to the condition of the trade.

Owing to the many resolutions on the unemployment situation, the convention decided to devote one session to the discussion of this question as well as that of unemployment insurance. All the resolutions dealing with these two questions were adopted. The convention went on record as favouring the curtailment of immigration during times of depression and the shortening of the work day. Resolutions were also adopted as follows:—

Favouring legislation for the granting of free medical and surgical treatment and free medicine to those coming under the Old Age Pension Act.

Protesting against the hours worked on the Hydro undertakings, and asking for the adoption of fair wages clauses in Hydro contracts.

Recommending a committee to investigate housing conditions of the poorer classes in cities and towns.

Seeking an eight hour day and the forty-four hour week on all provincial work or work done where public funds are expended.

Favouring the eight-hour day for all bus and truck drivers.

Opposing industries receiving benefits from the new tariffs that do not pass on some benefits to their workers.

Protesting against legislation requiring an election deposit from candidates for the provincial legislature.

Expressing appreciation for the co-operation of all parties concerned with the Apprenticeship Council of Ontario.

Officers elected were: President, Mr. Fred. H. Hawes, Hamilton; Vice-presidents, Messrs. C. R. Nicols, Ottawa; Albert Blythe, Hamilton, and Wm. Thompson, Windsor; secretary-treasurer, Mr. T. Jackson, Toronto.

Welland was chosen as the convention city for 1931.

District No. 26, United Mine Workers of America

The annual convention of District No. 26, United Mine Workers of America, was held at Truro, N.S., from June 23 to July 1, 1930, with one hundred and thirty-one delegates present, representing twenty-seven local unions, which was stated to have been the largest delegation to attend a convention of the United Mine Workers of America in the District. President D. W. Morrison being absent attending the International Labour Conference at Geneva, vice-president Muise presided.

The delegates considered about ninety resolutions dealing with wages and working conditions in the mines, workmen's compensation, and mining legislation, which included the eight-hour day, and old age pensions. One of the most important subjects, from an organization standpoint, to come before the convention, was the proposal to take a referendum vote of the members in order to ascertain whether they preferred to remain with the United Mine Workers of America or to become affiliated with some other form of organization. After a lengthy discussion the proposal was defeated by a considerable majority. The convention endorsed a vote of confidence in the District Officers for successfully negotiating a two-year wage agreement providing for an increase in wages for datal men.

Ontario and Quebec Conference of Printers

The nineteenth annual convention of the Ontario and Quebec Conference of Typographical Unions was held in Peterborough, Ont., on June 27-28, with representatives present from the larger cities of the two provinces. The delegates were welcomed by Mayor Roland Denne, Mr. E. A. Peck, ex-M.P., and Mr. R. M. Glover, manager of the *Peterborough Examiner*. Others who spoke at the opening session were Mrs. A. Garvie, representative of the women's auxiliary of the London Typographical Union, and Mr. Frank J. Plant, chief of Labour Intelligence Branch of the Federal Department of Labour. At a later session the delegates were welcomed by Mr. T. J. McMurray, president of the local Trades and Labour Council. Reports were presented by the president, first and second vice-presidents and the secretary-treasurer, all of which were referred to the respective committees. The reports were later approved, as were also the following recommendations of the committee on officers' reports: (1) that more financial assistance be secured; (2) in favour of campaigns for the adoption of the union label; (3) in favour of the appointment of an organizer for the provinces of Ontario and Quebec;

(4) in favour of the five-day week; (5) in favour of closer affiliation of the allied printing trades.

It was decided to raise the *per capita* tax to 15 cents per year for the first 300 members, the tax of 2½ cents on all over 300 to remain as at present. Reports were also given by the various delegates on trade matters in their respective jurisdictions, in which the need for organization work was strongly urged. It was decided that the executive of the International Typographical Union be requested to place an organizer in Ontario and Quebec.

Approval was given to a request of the Women's Auxiliary of the International Typographical union for more activity in organizing auxiliaries in the respective jurisdictions of the local unions, and it was decided to allow women's auxiliaries to be represented at future conventions.

Second vice-president Hugh S. Bentley, of Hamilton, spoke of the advantages of apprenticeship contests to the conference and to the apprentices and the trade generally. These contests were organized by the Ontario and Quebec Conference of Typographical Unions with a view to encouraging the best efforts of apprentices to become competent printers. Mr. Bentley announced the names of the winners in the various contests in the seventh annual competition.

It was resolved that the work of the conference and the request for financial aid from headquarters be brought to the attention of International President Chas. Howard, who was to visit Toronto in July on the occasion of the convention of the International Brotherhood of Bookbinders.

The conference closed with the re-election of the following officers: President, G. William Smith, Kitchener; first vice-president, Wm. S. McGowan, Toronto; second vice-president (chairman of apprentices), Hugh S. Bentley, Hamilton; secretary-treasurer, A. H. Wheatley, London.

Montreal was chosen as the convention city for 1931.

American Federation of Musicians

President Joseph N. Weber presided over the thirty-fifth annual convention of the American Federation of Musicians, which was held at Boston, Mass., on June 9-14, with approximately 400 delegates in attendance.

In addressing the delegates President Weber gave a historical résumé of the organization since its inception. He also traced the steady mechanization of industry from the earliest beginnings. The delegates were warned to be on the alert against the influence of those who would destroy everything that was constructive and beneficial in the Federation. Some of the other subjects treated in the president's address were: shorter work week; relations with the International Alliance of Theatrical Stage Employees; television; finances and laws of the organization.

The report of Secretary Kerngood showed that 675 cases had received the attention of the executive board during the past year. Receipts from all sources together with balance on hand on April 1, 1929, amounted to $574,689.67, and disbursements totalled $271,777.13, leaving a balance on hand of $302,912.54. The credit balance for the year was $41,537.35.

A number of changes in the laws of the organization were authorized by the convention. The efforts of the American Federation of Labour to secure the five-day week was endorsed. The executive of the American Federation of Labour was requested to petition the United States Congress to appoint a non-partisan commission to investigate the unemployment situation, define the causes, and recommend a remedy.

The following officers were re-elected: President, Joseph N. Weber, 1440 Broadway, New York, N.Y.; vice-president, W. L. Mayer, New York, N.Y.; secretary, Wm. J. Kerngood, 37-39 William St., Newark, N.J.; treasurer, H. E. Brenton, Box B, Boston, Mass.; G. B. Henderson, 489 Davenport Rd., Toronto, Ont., was also re-elected as a member of the executive committee.

Chattanooga, Tenn., was selected as convention city for 1931.

Amalgamated Meat Cutters and Butcher Workmen

The convention of the Amalgamated Meat Cutters and Butcher Workmen of North America, held at Detroit, Mich., on June 9-13, 1930, adopted plans, submitted by the general executive board, for the establishment of a home for aged and incapacitated members. The convention also passed a resolution favouring old age pensions, and voted unanimously in favour of the five-day week in the packing industry.

Miners' International Federation

The 29th Congress of this organization was held last May at Cracow, with delegates present representing the following countries:—Austria, Belgium, Czechoslovakia, France, Germany, Great Britain, Luxemburg, the Netherlands, Poland, Sweden and Yugoslavia. The total affiliated membership represented at the congress was 1,222,687. Resolutions were adopted relating to the need for the international organization of the coal industry; hours of work in coal mines; vocational training for miners; migration; war; workmen's compensation; the inspection of mines by workers; and workers' holidays.

The chairman, W. J. Dejardin, referred to the "chaotic conditions" under which the industry was carried on, no account being taken of the consumers' needs. In seeking a remedy for this condition the Federation had asked the League of Nations to collaborate in finding ways and means of achieving greater uniformity in the labour legislation of the various coal producing nations, thus reducing the competition among them which had had such disastrous effects on the workers. (The economic committee of the League of Nations responded to this request with special reports on the coal situation. These reports were briefly outlined in the LABOUR GAZETTE, June, 1929, page 681).

There were differences, the chairman continued, in laws and regulations, in working hours, in pensions, in workmen's compensation, in compensation for industrial diseases. In some countries the workers were paid for holidays; in others this reform was contemplated; in others again nothing was being done in this respect. In countries of the third category the cost of production, unburdened by social charges, stood at such a low figure as to enable coal to be marketed at cheap rates. Therefore the Federation had requested the International Labour Office to speed up its activity with a view to establishing a standard of international labour legislation which would safeguard democratic nations against being handicapped in the international market because their legislation tended to improve the lot of the mine-worker. The chairman stated that "the coal industry was in a quasi-permanent state of crisis oscillating between periods of artificial prosperity, which enabled private capitalists to enjoy huge profits, and periods of intense depression during which the worker had to foot the bill by submitting to reductions of wages and to prolonged periods of unemployment, causing profound misery and at times starvation."

Conciliation and Arbitration.—In regard to the conciliation and arbitration of labour disputes a report was presented by Mr. A. J. Cook, on behalf of the Miners' Federation of Great Britain, on wage fixing machinery. The report, after describing in detail the methods of conciliation and arbitration and also the wage fixing machinery for miners in Great Britain, pointed out that trade union agreements in Great Britain were not subject to legal sanction, and that the principle of obligatory arbitration in the legal sense had never been accepted by any important trade union of Great Britain. In accepting such a principle the workers would necessarily have to renounce their right to withdraw labour, and the British workers considered that this right should not be given up in any circumstances. In practice, the employers and workers respected any engagement they made under a collective agreement, which was based on the good faith of the contracting parties. The British miners considered that the methods of conciliation and arbitration which obtained in Great Britain conformed to the best interests of the workers and of the industry itself, and served better to promote the development of trade union organization than any system of conciliation and arbitration based on legal sanction.

This question is to be included in the agenda of the next congress.

The resolution on vocational training recommended co-operation among all countries represented in securing a uniform training system, regulated by the state, the workers having a voice in drawing up the curriculum, etc.

In regard to migration, the Federation recommended the establishment in each country of immigration, of a national council of mining labour, for determining the requirements of the industry in regard to foreign labour.

10067—4

British Labour and Family Allowances

The British Labour movement as represented by the Trades Union Congress and the Labour Party, has been studying the question of family allowances. An investigation was conducted through a Joint Committee on the Living Wage, which recently issued an interim report on family allowances and child welfare. No recommendation was made in this report, the opinion of the committee being divided on the subject. Subsequently the Joint Committee resumed its inquiry, issuing a majority and a minority report. The Labour Party Executive favours the majority report, while the General Council of the Trade Union Congress has accepted the minority report. No final recommendation has been agreed upon for submission either to the Trades Union Congress in September or to the conference of the Labour Party next October.

The main recommendations of the majority report are as follows: (*a*) that family allowances be paid, out of public funds, in respect of each child from birth to the school-leaving age for the time being in force; (*b*) that the allowances be at the rate of 5s. per week for the first child and 3s. per week for each successive child; (*c*) that the allowances be paid direct to the mother, or appropriate guardian; (*d*) that the allowances be paid for all children (in respect of whom income tax rebate is not obtainable); (*e*) that the allowances be paid through the Post Office.

The minority report recommends: That before any decision on family allowances is taken the following social services should be fully established out of public funds: (1) A complete medical service (preventive and treatment) for all children from birth to the school-leaving age; (2) pre-natal and post-natal maternity service together with a cash payment for each child for the first year or two years after birth; (3) the raising of the school-leaving age with adequate maintenance allowance during the additional year; (4) the provision of nursery schools for children up to the age of admission to elementary schools; (5) the provision of adequate health houses; (6) the elimination of tuberculosis and the provision of pure milk.

"We agree entirely," the minority report continues, "that further financial provision is urgently needed for the improvement of the health, education, and general well-being of the children. We differ only in our view as to the most effective and economical means to that end in the present circumstances of the nation. Such funds as are available would achieve far more valuable results in the form of improved health, education, and other conditions of well-being for the children if expended in developing the social services than if spent in cash payments. An allowance of 5s. a week, for instance, will not enable a slum family to get a decent house somewhere else. The houses have to be built, the slums have to be cleared, and if the funds available are limited, we consider that these socially provided services should come first in the interests of the children themselves. No amount of maternal care plus a small cash allowance, can provide remedial measures, including perhaps special treatment for the sick child."

The interim report gives a summary of the various plans of family allowances in the countries where the system has been adopted in industry or by the State. The five types of family endowment schemes either in operation in other countries or suggested are reviewed as follows: (1) The simple payment of allowances by single employers (it is stated that this system has been universally condemned as favouring the employment of single men); (2) the Equalization Fund or "pool" system whereby allowances are paid out of a pool or fund established by contributions from employers; (3) a national insurance scheme; (4) a national scheme financed out of taxation; (5) a national scheme financed by a levy on industry.

Canadian opinion on the subject of family allowances also shows a marked division. Last year the House of Commons adopted the following resolution moved by Mr. J. E. Letellier and seconded by Mr. J. S. Woodsworth; "that, in the opinion of this House, the question of granting family allowances should be studied, taking into consideration the respective jurisdiction of both federal and provincial parliaments in the matter, and that the said question should be referred to the committee on industrial and international relations, with instructions to enquire into and make report."

A report on this subject by the Parliamentary Committee on Industrial and International Relations, adopted by the House of Commons at the same session, was outlined in the LABOUR GAZETTE, June, 1929, page 605. Opposition to the proposal was recorded by the Trades and Labour Congress of Canada at its session of 1929 (LABOUR GAZETTE, September, 1929, page 1011). The All-Canadian Congress of Labour at its 1929 convention, registered its approval of family allowances provided by the State to wage earners with two or more children (LABOUR GAZETTE, December, 1929, page 1364).

SECOND ANNUAL CONVENTION OF PROVINCE OF QUEBEC SAFETY LEAGUE

THE Province of Quebec Safety League held its second annual industrial safety conference at Montreal on May 19-22, the delegates representing practically all industries in the Province. The League was founded in 1923, and at the present time has seven hundred firms enrolled as members, besides insurance companies, schools and miscellaneous organizations, representing in all over 100,000 employees. Marked progress was shown in the work of the organization during the past year, several speakers referring to the "round table conferences," and the other methods of furthering safe practices that had been carried out with good results through the initiative of the general secretary, Mr. Arthur Gaboury and the other officers of the League. During the course of the Conference addresses were delivered by leaders in the safety movement both in the Province of Quebec and in other Canadian Provinces and the United States.

At the opening session of the conference, at which Mr. Allan M. Mitchell, chairman of the Montreal Branch of the Canadian Manufacturers' Association, presided, an address was given by Mr. Frank B. Common, chairman of the Algoma Steel Corporation, Sault St. Marie, Ontario. "The minimizing of industrial accidents," he said, "is not only essential in the interests of corporations but it is a duty to the employees and to our country. The payment of an insurance claim will never fully indemnify the injured workman or his family against the loss which they are called upon to suffer, nor will it restore to the industry the services of a member whose skill and energy have been destroyed as the result of an accident which might have been avoided. Interest in this subject is not confined to the employee and the company which he serves, but also affects the public generally as every corporation is obliged to include in its production cost and price which it asks for its product, the cost of such insurance as is required to be maintained by it against loss arising from this cause. Although it is only in recent years that this movement has received the serious attention which it deserves, sufficient progress has been made to conclusively demonstrate that money and effort expended in the utilization of proper safety devices and the practice of educational methods among the employees are well expended."

Mr. Common gave an account of the record of the Algoma Steel Corporation during the past three years in regard to industrial accidents as follows:—"Accidents per thousand employees were reduced from 103 in 1926, 72 in 1927, 52 in 1928 and 38 in 1929, an improvement of 30 per cent in 1927, 51 per cent in 1928 and 65 per cent in 1929, all as compared with 1926. The severity of accidents was also reduced over a loss of 4½ days per 1,000 hours worked in 1926 to 2½ days in 1927, 1½ days in 1928 and approximately 1¾ days in 1929, this resulting in severity improvement of 51 per cent in 1927, 69 per cent in 1928 and 60 per cent in 1929, all as compared with 1926. Accident costs based on our ingot production also show following percentage of reduction: 61 per cent in 1927, 67 per cent in 1928 and 68 per cent in 1929, all as compared with 1926.

"In the province of Ontario," the speaker continued, "industries are classified and grouped under the Ontario Compensation Act according to the nature of the particular business, and the improved position of the Algoma Steel plant in accident prevention has placed that company at the head of the group in its class under the Compensation Act thereby resulting in a substantial reduction of its insurance assessment rate."

At the same session Dr. R. M. Little, chief of the Rehabilitation Bureau of the Department of Education of New York State, gave an address in which he referred to the successful safety work carried on by various industrial organizations, including the Steel Company of Canada, the Canada Cement Company, the Portland Cement Company, and others.

Mr. E. W. Beattie, K.C., president of the Canadian Pacific Railway Company, who addressed the convention on the first day, referred to his company's accident prevention work. There were 8,500 men employed at the Angus Works and last year they had only 240 minor accidents, eight being serious while one only resulted in death. They were indeed fortunate, he said, but it must not rest at this, and efforts must never cease if it is desired to show improvement. The railways, he said, had grappled with the situation and have come out fairly successful. Safety measures are simply the result of education, education in the principles of Safety First. The most effective method in dealing with the problem is by placing the responsibility on the officer in charge of a department or shop.

Mr. Walter E. Darling, of Cincinnati, Ohio, who had been severely injured in an industrial accident, gave an address on the necessity of safety work. He declared that 90 per cent of accidents were due to carelessness.

Mr. Arthur Gaboury, general secretary of

the League, gave an address in French, outlining the work of the League, and pointing out that success could only be achieved through the co-operation of workmen and their employers.

Mr. Louis Guyon, deputy Minister of Labour of the Province of Quebec, referred to the fact that the earliest safety movement had been in France, where an organization had been formed in 1867 among the cotton workers of Mulhouse under the presidency of Dolphus Engel. He praised the work of the Province of Quebec Safety League, pointing out that however important compensation laws might be, the prevention of accidents was infinitely more important.

Mr. Alphonse Bélanger, director of the Technical School, Montreal, referred to the multiplicity of manufacturing processes, and maintained that the protection of employees should keep pace with developments in industry. He stated that the Province of Quebec Safety League was now the most active agency in the Province, largely owing to the work of its indefatigable secretary, Mr. Arthur Gaboury.

Dr. W. Winfrey, official examiner of the Saint John Ambulance Association, described the work of the Association during the past twenty years in providing for remedial measures in connection with accidents on the street and in the home, in the country and in the workshop.

Mr. A. G. Shakespeare, chief instructor of the Province of Quebec Safety League Centre of the Saint John Ambulance Association, referring to the task before the Safety league of the world, stated that despite the millions of dollars spent last year in the United States, there were 95,000 deaths from accidents, 24,000 of these being in industries, 31,500 due to automobiles and 250,000 resulting from infection in industries alone.

"I do not know," he said, "how many of those 95,000 lives could have been saved had a knowledge of First Aid been applied, but I do know there would not have been one of the 250,000 cases of infection, had the knowledge of First Aid been applied when the injury was produced. And therefore, you must all see in industries, in the home and on the highway, the knowledge of First Aid is necessary and I strongly urge that all arrange to attain this knowledge at once."

Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations of Ontario, described the progress of the movement in that province, with special reference to the construction industry. Discussing the share of the management in preventing accidents, the speaker stated that employers should provide the following six conditions for safe work. 1. A clean and orderly department; 2. Proper equipment; 3. Proper materials; 4. Proper instructions; 5. Proper supervision; 6. Proper pay.

During the convention "safety playlets" were performed before the delegates, one of these being played by the employees of the Bell Telephone Company, Montreal.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety in Elevator Construction

An address on this subject was given on June 20 by Mr. C. F. Ritchie, manager of the Otis-Fensom Elevator Company, to the Province of Quebec Safety League. He began by outlining the history of elevator construction from the earliest times, and proceeded to give a description of the special risks involved in the use of elevators in building construction. "As soon as a building is to go higher than three or four floors, one elevator or more are usually installed. The installation at all times presents many hazards, and it is a wonder at times that accidents are not more numerous. The men employed are required to have had some elevator experience, and because of their knowledge of the danger involved, are always on the lookout for accidents. To delve into the causes, let me point out how they arise. About the first thing that is done during the installation is the hoisting and securing of the main and counterweight rails, the hoisting may be done by means of a power winch or else by hand rope, depending upon the height of the building, and due to the rapidity and class of work which requires an open hatchway, scaffolding is done away with and planks are usually thrown across the hatchways and the securing of the rails is made.

"A cause of inconvenience and source of accident is brought about by the indiscriminate cluttering of the approaches to the hatchways by material belonging to other trades. On the ground floor of a building it is possible to find in front and around the hatchways piles of pipes, terracotta tile, planking, crates, concrete forms and materials of all descriptions. The uper floors are almost as bad or worse. A small piece of wood may seem a harmless item, and yet when it has dropped

a few floors the momentum it has gathered is enough to stun and seriously injure a person. An interfering piece of concrete is chipped off easily with a hammer and several floors below strikes like a ton of bricks.

"Several different trades may work at one time in the hatchway, and the precautions and safeguards one might take may interfere with the other man's work, and yet each must do his work in the allotted time. The man making or dismantling concrete forms on an upper floor is a hazard to the bricklayer or tile man at a lower floor, to say nothing of the elevator man, who may be anywhere in the hatchway.

"Do not entertain, however, the idea that the elevator man is blameless altogether, because in spite of the skill he may exercise even he makes mistakes. When ever it is necessary for him to do a considerable amount of work at any floor he scaffolds up properly and covers himself on the next higher floor. The foreman on the job inspects his scaffolding and sees if it is safe. On the back of his Daily Time Sheet a statement appears in which the company demands that necessary and proper scaffolds are made and used, and that all time and material so required will be furnished.

"A move in the proper direction has been made by the general contractors in this province on most jobs to provide a barrier about 4 feet high around all elevator hatchways for the protection of all workmen. A very thoughtful idea, which is not carried out as well as it might be because of the flimsiness of these barriers. A man leaning against one or a truck backed into one and it has lost its shape and its purpose. In one city in Canada, I am told, the builder is compelled to erect a barrier around the elevator hatchway and other shafts placed not closer that 2 feet from the shaft. The vertical struts to have at least three bars at approximately a height of 48" and rigid inspection is made by the authorities.

"In tall buildings accidents of all kinds are fairly numerous, numerous enough to warrant the having of a First Aid Station with a trained nurse in attendance at all times, and a doctor during a certain period of the day. This scheme has been tried on a few of our big jobs in Montreal and I suggest that it become an understood thing on all big contracts. Suppose that no such First Aid Station exists on the job, then a man when injured may be treated by his foreman, who may or may not be a first-aider, and then must go to hospital, usually a distance away. Then again a small injury may be neglected and never reported because of all the trouble to obtain either First Aid or get to a hospital. A First Aid Station on the job supported by the various sub-contractors under the supervision of the General contractor, would be a great boon to the workmen, and in the long run an economic saving to all the contractors. Prevention is the best and cheapest, but in case an accident does happen the sooner it is treated the least inconvenience and cost is involved.

"As has been expressed by many parties, but to my knowledge never carried out locally, there should be a Safety Meeting about once a week, attended by the foremen or First Aid men of each contractor on the job. All of the men should be interested in observing the other fellow's working conditions and practices and discuss their merits and demerits, and if some particularly hazardous practice is observed, to suggest some means of lessening the danger. They are interested in each other's welfare and if one can help the other to work more safely it will promote a greater feeling and understanding amongst everyone on the job, and if the workman realizes what is being done to help his lot he will show his appreciation in the type of work he produces.

"In many instances not sufficient protection is provided around the hatchway and the entrances when an elevator of fairly high speed is being used for this service. In some cases the walls at the back and sides have already been built, but the openings are exposed, and many a man has been killed by looking into the unprotected opening to see whether the elevator was up above or down below and being caught by the descending car, and assuming that an elevator is running for temporary service in a hatchway where the side and rear walls have not been built, then proper barricades should be provided for the protection of the workmen in the building. These barricades should be at least 7 feet high, and be built of boards. There should not be any more than 2 inches between each board so as to prevent anyone putting their hand through the opening and also prevent materials falling down the hatchway. In either case the entrance should be protected with a door or gate, either hinges or on tracks, of sufficient height to prevent anyone getting their head over the top, this gate being opened only from the hatchway side.

"The operator employed on an elevator for temporary service in a building under construction should be a very competent and trustworthy employee, who can be relied upon to see that his doors or gates are always locked and closed, and control movement in and out of the car and be thoroughly familiar

with the operation of the elevator. In other words he must be a thoroughly competent man and capable in every way of handling the elevator. The elevator platform, of course, it is agreed by all, should be enclosed with a temporary enclosure of rugged design and construction, particularly over the top to protect passengers from materials falling down the hatchway."

Safety Code for Wrecking Buildings

The Industrial Commission of the State of Minnesota recently adopted the following safety code relating to the wrecking of buildings.

1. When wrecking any buildings, the floors and walls shall not be disturbed until the roof has been removed.

2. Side walls shall not be removed more than one story at a time, after which the floor of that particular story shall be removed.

3. Chutes shall be provided to lower plaster, bricks, and other loose material. Material shall not be allowed to accumulate on floors.

4. Stairways and passageways shall be kept clear of materials at all times.

5. All floor openings shall be provided with substantial railings, or shall be kept securely covered.

6. Adequate scaffolding shall be provided and maintained for use of employees removing walls and partitions.

7. All boards and other loose material shall be kept free of protruding nails.

8. Employees shall not be allowed to stand or work on the top of walls being removed.

9. Employees shall not be allowed to stand or work underneath steam-shovel dippers or other mechanical devices used for carrying or hoisting materials.

Quarry Accidents in United States

A report on quarry accidents during 1927 was published recently by the United States Department of Commerce (Bureau of Mines, Bulletin 314). Returns received by the Bureau of Mines from quarry operators in the United States showed an average of 91,517 men employed in 1927. This number included employees in and around quarries and those at crushing and rock-dressing plants, cement mills, and limekilns. The total working time for all employees was 24,782,561 man shifts, an average of 271 shifts per man. Accidents killed 135 men, or 19 less than in the previous year and injured 13,459 men, and increase of 258 over 1926. The death rate of 1.63 per thousand 300-day employees represented a reduction of 13 per cent from the previous year's rate of 1.87.

Chief among the causes of fatal accidents to men working inside the quarries were falls or slides of rock or overburden; 38 out of 99 deaths in 1927 were due to this cause. Explosives were another important contributor to the fatality record, 18 deaths being reported in this group. Fifteen deaths resulted from haulage accidents, while falls of persons were responsible for the death of 11 men. Accidents at crushers, mills, and other plants outside the quarries were, as regards fatalities, due chiefly to machinery, 15 out of 36 deaths being thus accounted for.

CHANGING OCCUPATIONS IN THE UNITED STATES

THE results of a study of the occupations of the people as shown in the successive decennial censuses of the population of the United States are presented in the monthly *Bulletin* published by the National Industrial Conference Board (U.S.A.). Definite statistics of occupations begin with 1850, but for 1840 and 1820 information is available for certain leading occupations. For the period 1850 to 1920 the classifications of occupation were not uniform, but they have been adjusted in the present study so as to present a true picture of changing conditions. To the census figures an estimate for 1929 is added, having been prepared by Dr. E. Dana Durand, statistical assistant to the United States Secretary of Commerce. Dr. Durand was director of the 13th census (1910). A table is given showing the actual numbers employed by occupational groups from 1820 to 1929. The table reproduced below shows the proportion of each group to the total working population in the same years. It is pointed out that "at the beginning of the record nearly three quarters of all those gainfully occupied were employed in agriculture." As the years have progressed this proportion has constantly dwindled until in the estimates for 1929 it is less than one-fourth of the total number of occupied persons. From approximately one-eighth, the total persons employed in manufacturing and mechanical pursuits have gained in numbers till they now represent more than one-fourth. It is to be noted, however, that this growth was largely attained by 1880. From then until 1920 this group increased somewhat more

rapidly than the total, and reached three-tenths of all employed in that year. But in the 1929 estimates it is relatively losing ground. Domestic and personal service has during the entire period shown little change in its proportion of the total employed. Of the smaller groups professional service has at each date since 1860 increased its proportion, while mining generally increased until 1920 but shows a slight decline since that date.

The outstanding feature of the table is the increased importance of the group "trade and transportation," now the largest of all those noted, and comprising in the estimates for 1929 nearly three-tenths of all those gainfully occupied. By contrast only one-fortieth of the total number in 1820 fell to this group. Throughout the entire period the growth has been consistent, though more rapid from 1920 to 1929 than in any equal number of years.

DISTRIBUTION OF OCCUPATIONS IN U.S.A., 1820-1929

Year	Agriculture	Manufacturing and Mechanical	Trade and Transportation	Domestic and Personal Service	Professional Service	Mining
	%	%	%	%	%	%
1820	72·26	12·15	2·50	10·00	2·81	0·28
1830	70·76	13·30	3·10	9·79	2·77	0·28
1840	68·99	14·61	3·82	9·59	2·71	0·28
1850	64·83	16·38	5·39	9·55	2·69	1·16
1860	60·20	18·34	7·44	9·52	2·90	1·60
1870	53·85	21·24	10·42	10·20	2·93	1·36
1880	49·42	24·07	12·20	9·33	3·46	1·52
1890	42·63	25·60	15·65	10·31	4·06	1·75
1900	37·45	27·02	18·73	10·58	4·17	2·05
1910	31·90	28·38	21·33	11·26	4·55	2·58
1920	26·74	30·63	24·93	10·05	5·05	2·60
1929	22·81	28·51	29·93	10·42	5·92	2·41

Variation in Employment Trends of Women and Men

The Women's Bureau of the United States Department of Labour has published Bulletin No. 73, giving a report on the variations in employment trends of women and men in the State of Ohio over an 11-year period. The study was undertaken at the request of the American Statistical Association, the State of Ohio being taken as affording a sample of conditions prevailing throughout the country. It is pointed out that although women are in the minority among wage earners, the present developments of the economic and industrial life of the country are bringing about significant changes in their status. If public policies are to be guided wisely toward the stimulation of employment and the reduction of unemployment for all wage earners it will be necessary to know just how the developments of women's employment differ from those of men's. If there is no great difference in trends for the two sexes, figures giving employment statistics for the two groups combined will be adequate and will be simpler of collection and presentation. But, on the other hand, it may be that women's employment is subject to different influences and reacts differently from men's. If this is so, it will be essential that employment trends for each sex be known.

"During the entire war period," it is stated, "and including the months immediately following the war, the employment figures for Ohio manufacturing industries show that there was considerable diversity in the trends of men's and women's employment. The curves showing the long-term trends illustrate that during this period women gained a position of increased importance among the wage earners in a number of classifications, and retained it, to a greater or less extent, throughout the rest of the period studied. . . . Second in importance only to the war in its effect on trends of employment is the depression of 1920-21, that hit industry to a greater or less degree all over the United States. Many other periods of depression, equally or more severe, have affected the industries of the country, but within the 11-year period under discussion it is the years 1920-21 that stand out as a time of greatly decreased employment."

The report contains tables and charts, showing the proportion of male and female employees in all industries, and also in each of the industries in which women are employed.

In service occupations as a whole the relative importance of men and women wage earners seems not to have been affected at all by the war until the middle of 1918, when men's employment decreased rapidly although women's continued along a normal course. By the middle of 1919 the men's curve had risen again until they had more than regained their former position of superiority in this classification.

In trade (retail and wholesale) during the latter part of 1918 the characteristic slight decrease for men and considerable increase for women occurred and women maintained their gains after this, with certain seasonal fluctuation, until the middle of 1921.

In transportation and public utilities the effect of the war on the relative position of men and women became evident early in 1917, when the women's curve started above the men's. By the end of 1918 the index of women's employment was more than 50 points above the index foremen, and although there was a slight decrease in the relative importance of women during 1919 their curve remained well above that of men, and continued so through 1924.

In manufacturing, the armistice in November, 1918, was followed by a rapid drop in women's employment, but it does not seem to have had a very striking effect on men, whose employment continued to decline after the armistice at about the same rate as before. In the depression immediately following the war, in 1919, women's employment decreased more than men's but recovery came at about the same time for both.

MALE AND FEMALE WAGE EARNERS IN INDUSTRIES IN OHIO, 1914-1924

Year	Male	Female
1914	465,569	87,569
1915	541,118	97,225
1916	699,574	112,514
1917	764,737	123,140
1918	754,727	141,000
1919	737,757	138,347
1920	797,601	145,324
1921	537,345	117,995
1922	625,644	124,759
1923	743,881	145,746
1924	715,902	144,477

Distribution of Women in British Industry

The British Home Department has published a short report of a recent study of the factors operating to determine the distribution of women in industry. The relative proportions of male and female workers employed in the principal industries using female labour, for the year 1928, are shown in the following table:—

PERCENTAGE OF MALE AND FEMALE EMPLOYEES IN VARIOUS BRITISH INDUSTRIES

Industry	Percentage of	
	Males	Females
Textile factories	36·11	63·89
Cotton	36·86	63·14
Woollen and worsted	39·86	60·14
Non-textile factories	72·91	27·09
China and earthenware	49,90	50·10
Food and drink	63·97	36·03
Tobacco	27·93	72·07
Metal (except extraction and founding)	86·96	13·04
Printing, bleaching, dyeing and lace warehouses	67·68	32·32
Clothing	32·04	67·96
Paper, printing and stationery	62·55	37·45
Chemicals	81·31	18·69

The general conclusions reached in the study are stated as follows:—

"Women's part in industry has been steadily increasing, and the distribution of men and women in industry has been in the past and is being to-day, except in a few isolated cases, determined by factors quite independent of the legal restrictions on women's employment. This increase has taken place notwithstanding an increase in the rates of women's wages at least equal to and in some industries greater than the increase in men's rates.

"In the earlier stages of industry, the distribution of men and women in industry was largely determined by tradition, aptitude and physical strength, and in particular cases by the shortage or otherwise of male labour. As industry developed, distribution constantly tended to be modified by changes in the nature of the work brought about by the introduction of new types of machinery and new processes.

"In the more recent developments of industry, the constant increase of light repetition work has greatly enlarged the field for the employment of women.

"A marked feature in connection with women's employment as compared with men's is the tendency for women to be found in the unskilled processes. The number of processes carried out by women during the war on which they had not previously been employed, and the skilled work done by women in certain trades, are sufficient to show that this tendency is not due to any innate want of aptitude for or capacity to learn certain kinds of work. The cause is undoubtedly to be found in the difference of attitude towards industrial work.

"The industrial life of women is, in general, a short one. Though in some industries, such as cotton weaving, women may continue to work at their trades after marriage, in the majority of cases they do not. This makes

them unwilling to spend much time on a course of training, and disposes them to seek occupations where they can earn a good wage as quickly as possible. For the same reason, managers are unwilling to train up workers for skilled occupations if they are likely to lose them when they have become really useful. The large majority of women employed are under thirty-five years of age. In fact, in over half the trades included in the study less than 20 per cent are over thirty-five, and in two trades only 6 to 8 per cent stay on over that age.

"The influence of the marriage factor in limiting women's industrial life is estimated in the report. Work in the factory is looked upon by most as a temporary career, which fills in the time and enables them to earn a living between school and marriage, and for this reason they tend to seek the easily-learned repetition work, and are apt to lack the enterprise and ambition which would make such work seem irksome. The increasing specialization of processes and the substitution of a machine operation for craftsmanship or skill acquired by training have facilitated this tendency.

"The replacement of acquired skill by a machine process is not, of course, invariably in favour of the women. The introduction of machinery may eliminate the hand work of women as well as the craftshmanship of men. This happened in lace making, in cigarette making and other industries. In confectionery works, much work, such as covering chocolate biscuits, and wrapping of chocolates, which used to be hand work done by women, is now done by machines.

"The following illustration from a large confectionery works may be given as showing the influence of the different factors in determining the action both of the management and of workers.

"The lower wage rates paid to women make it to the advantage of the firm to employ women whenever possible. Moreover, for much of the work women have the advantage of being by temperament and character more suited to it. In processes such as the packing of chocolates or the making of handmade chocolates, they attain a high standard of manual dexterity within a short time. Also, they easily attain a standard of neatness and cleanliness in their work, which is necessary in the case of food-stuffs, and they are apparently unaffected by the monotony of the work. Women are consequently employed in every possible process, except those which require physical strength and those which require skill involving a long period of training. The 'skill' in a confectionery works consists to a large extent in acquired knowledge of a specialized kind. For instance, the 'mixers' at the works in question must have an intimate knowledge of the ingredients and of the precise temperature and 'length' of the mixings of the many varieties of chocolates made. This knowledge takes some three or four years to acquire, and when the firm has taught a man they reckon on having his services for a number of years. The necessary knowledge could quite easily be acquired by a woman, but naturally the firm would not consider it worth while to spend the time teaching a woman, when the chance of her remaining in their service is so small."

Automobile Statistics for Canada in May

The Dominion Bureau of Statistics states that the production of automobiles in Canada during May, at 24,672 cars, was the greatest number reported for any month since May of last year when the output amounted to 31,559 cars. In May, 1928, production totalled 27,308 cars and in May, 1927, it numbered 25,708 cars. The Bureau's monthly index number on motor car production, which makes due allowances for seasonal tendencies and is based on the long term trend, 1919 to 1927 inclusive, shows that output which started in January of this year at 40 per cent below normal gradually worked into an improved position until it passed the normal line in April and in May was 4.7 per cent above the normal for that month.

When compared with the data for April the figures for May show a gain in the output of all types of cars with the exception of trucks which dropped to 693 from 777. Open passenger cars advanced to 2,622 from 2,517, closed model passenger cars to 17,480 from 17,409. chassis to 3,837 from 3,547, and 40 taxicabs and busses were made as against 7 of this type in the preceding month.

Customs' records show that the number of cars imported into Canada during May increased to 3,976 from 3,432 in April, while exports declined to 3,091 from 3,321.

Of the total cars produced in Canada during May 3,193 were intended for export and the balance of 21,479 cars were made for sale in the Canadian market. The apparent consumption of automobiles in Canada during the month, as determined by adding the 21,479 cars made for sale in Canada to the 3,976 cars imported, amounted to 25,455 cars. For the year to date the apparent consumption, thus computed, was 90,067 cars.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fourteenth Session of the International Labour Conference

THE Fourteenth Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held at Geneva, Switzerland, from June 10 to 28, 1930.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreements.

Thirteen previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, 1921 (LABOUR GAZETTE, January, 1922); Geneva, 1922 (LABOUR GAZETTE, December, 1922); Geneva, 1923 (LABOUR GAZETTE, December, 1923); Geneva, 1924 (LABOUR GAZETTE, August, 1924); Geneva, 1925 (LABOUR GAZETTE, July, 1925); Geneva, 1926 (8th and 9th Sessions) (LABOUR GAZETTE, July, 1926); Geneva, 1927 (LABOUR GAZETTE, July, 1927); Geneva, 1928 (LABOUR GAZETTE, July, 1928); Geneva, 1929 (LABOUR GAZETTE, July, 1929); and Geneva, 1929 (LABOUR GAZETTE, December, 1929).

The Treaty of Peace requires that "the meetings of the general conference of representatives of the members shall he held from time to time as occasion may require, and at least once in every year." It will be observed that two sessions of the Conference were held in 1926 and also in 1929.

Each member state is entitled, under the terms of the Treaties of Peace, to send four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-third majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Conference Agenda

The agenda of the Fourteenth Session of the Conference comprised three items as follows: (1) Forced Labour (final discussion); (2) Hours of Work of Salaried Employees (final discussion); and (3) Hours of Work in Coal Mines.

In accordance with the double-discussion procedure, the first two of these items were the subjects of a preliminary discussion last year at the Twelfth Session of the Conference, which placed them on the agenda of the present Session for the second and final discussion. To complete this second stage of the double-discussion procedure, the Fourteenth Session was called upon to consider these items with a view to the adoption of proposals on them in the forms prescribed in Article 405 of the Peace Treaty, i.e., draft conventions or recommendations. The Conference accordingly had before it reports on each of these two items which reproduced and analyzed the replies of the Governments to the questionnaires sent to them after the Twelfth Session and which concluded with proposals for draft conventions or recommendations which the Conference took as a basis for discussion.

The third item (hours of work in coal mines) was added to the agenda of the Conference by the Governing Body in February last on the basis of the results of a Preparatory Technical Conference in January, on conditions of work in coal mines, which the Governing Body had convened in pursuance of a resolution of the Tenth Assembly of the League of Nations, and which was attended by government, employers' and workers' representatives

of the nine principal coal-producing countries of Europe. The steps leading up to this decision and the circumstances in which it was taken were explained in a report on Hours of Work in Coal Mines which the Conference had before it as a basis of discussion on this item. This report was noted in the last issue of the LABOUR GAZETTE, page 686. The report indicated that the Governing Body, when it decided to add the item to the agenda, left two general matters affecting it to be decided by the Conference itself: (1) whether it would consider the item as a general problem for the Organization as a whole, or as a problem limited to European countries, and (2) whether the Conference could arrive at a final decision on the item at the present Session without applying the double-discussion procedure. The report was accordingly based on the resolutions and discussions of the Preparatory Technical Conference and concluded with a proposed draft convention intended to enable the Conference if it wished to take a final decision at the Fourteenth Session, to proceed immediately to discuss a draft which takes account of the opinions and preferences expressed at the Preparatory Technical Conference.

Decisions of the Conference

The decisions of the Fourteenth Conference may be summarized as follows:—

Forced Labour.

By 93 votes to 0, the Conference adopted a Draft Convention embodying an undertaking to suppress the use of forced or compulsory labour in all its forms within the shortest possible period. The imposition of such labour for the benefit of private individuals, companies or associations would be immediately prohibited, as also would the use of such labour for work underground in mines. During a transitional period, recourse might be had to forced labour for public purposes only, as an exceptional measure, and subject to conditions defined in the Convention. The question of final abolition would be considered after five years.

By 91 votes to 0, the Conference adopted a Recommendation embodying principles for the avoidance of indirect compulsion to labour, and by 91 votes to 1 it adopted a Recommendation laying down rules to be observed in the regulation of forced labour.

Hours of Work of Salaried Employees.

By 86 votes to 31, the Conference adopted a Draft Convention providing that the hours of work of persons employed in commercial establishments and offices should not exceed forty-eight in the week and eight in the day; provided, however, that the weekly maximum might be so arranged that on one or more days the hours worked might amount to ten. Provision was made for exemptions and exceptions.

By 103 votes to 18, the Conference adopted three Recommendations in favour of national inquiries into hours of work in (*a*) hotels, restaurants and similar establishments, (*b*) theatres and other places of public amusement, and (*c*) establishments for the care of the sick, infirm, destitute or mentally unfit, such establishments being excluded from the Convention. The question of adopting special Conventions to cover them would be considered within four years.

Hours of Work in Coal Mines.

A Draft Convention limiting hours of work of underground workers in coal mines failed to obtain the necessary two-thirds majority on final vote.

The Conference had previously rejected by 79 votes to 33 a proposal made by the employers' delegates that this discussion should be regarded as the first, and that the second and decisive discussion should be held next year. It had examined the proposed Convention article by article, and had adopted it as a whole on the preliminary vote by 75 to 33. On the final vote, however, the majority for it was only 70 to 40.

It was next decided unanimously not to transform the proposed Convention into a Recommendation. Finally, it was decided by 105 votes to 22 that the question should be placed on the agenda of the 1931 Session of the Conference.

Four Resolutions bearing on the proposed Convention had been adopted before the final vote. One related to the safeguarding of conditions of work in coal mines where they were better than those prescribed by the Convention; another was in favour of the regulation of the hours of work of surface workers, on the lines of the Washington Hours Convention, at the same time as those of underground workers; the third pointed out that a complete solution of the coal problem would require the conclusion of one or more international agreements of an economic character, and drew the attention of the Economic Organization of the League of Nations to the need for and possibilities of reaching an economic agreement between the coal-producing countries. These three resolutions were adopted without opposition. The fourth, which was adopted by 84 votes to 3, was in

favour of placing the question of hours of work in lignite mines on the agenda of the 1931 Session of the Conference.

Resolutions.

At the instance of individual delegates, the Conference adopted four Resolutions requesting the Governing Body:

To explore means of hastening ratification of the Conventions concerning children and young persons, and to investigate other means of ensuring the protection of their health and their preparation for a fully-developed life (83 votes to 1);

To organize an exchange of views between the Governments of the chief industrial countries as to particular questions affecting labour which should receive the special attention of factory inspectors and be dealt with in their annual reports (80 votes to 3);

To consider the possibility of placing the question of holidays with pay on the agenda of an early Session of the Conference (84 votes to 21); and

To consider the possibility of placing the question of freedom of association on the agenda of an early Session (81 votes to 5).

A further Resolution, in favour of consultation with Governments as to the calling of an Advisory Asiatic Conference, failed to obtain the quorum, the vote being 52 for and 11 against.

Application of Conventions.

The Conference unanimously adopted the report of a committee which had examined the annual reports furnished under Article 408 on measures for the application of ratified Conventions. The report contained a number of observations on cases in which the annual reports were not presented, or were inadequate, or in which the Conventions did not appear to be fully applied by national legislative or administrative measures, and called on Governments which ratified Conventions to apply them immediately and completely.

Standing Orders.

The Conference adopted and applied for the first time a new procedure for dealing with resolutions submitted by delegates on matters not related to the items on the formal agenda. It referred to the Governing Body for consideration the questions of the composition of committees of the Conference and the allocation of votes, the use of non-official languages in committees, and the number of substitute delegates and advisers who might be nominated by Governments.

The text of the various Draft Conventions, Recommendations and Resolutions adopted by the Conference will be found on page 796 and following pages.

Countries Represented

Of the fifty-five countries which are members of the International Labour Organization, fifty-one sent delegates to the Fourteenth Session, this being the highest representation yet recorded. In addition, Norway, although not officially represented, sent an observer, as did also some of the states which are not members of the Organization, including for the first time, Mexico. Of the fifty-one delegations, thirty-five were "complete" in that they comprised representatives of employers and workers as well as of governments, while sixteen included only government delegates. It should be noted, however, that these incomplete delegations were from Member States whose industrial importance is still small. A list of the countries represented follows:—

Albania	India
Australia	Irish Free State
Austria	Italy
Belgium	Japan
Bolivia	Latvia
Brazil	Liberia
Bulgaria	Lithuania
Canada	Luxemburg
Chile	Netherlands
China	New Zealand
Columbia	Nicaragua
Cuba	Panama
Czechoslovakia	Paraguay
Denmark	Persia
Dominican Republic	Peru
Estonia	Poland
Finland	Portugal
France	Roumania
Germany	Siam
Great Britain	South Africa
Greece	Spain
Guatemala	Sweden
Haiti	Switzerland
Honduras	Uruguay
Hungary	Venezuela

Yugoslavia

Canadian Delegation

The Canadian delegation in attendance at the Conference was as follows:—

Government Delegates.—Mr. Gerald H. Brown, Assistant Deputy Minister of Labour; and Dr. W. A. Riddell, Canadian Advisory Officer to the League of Nations, Geneva.

Technical Advisers to the Government Delegates.—Mrs. R. F. McWilliams, Winnipeg, Man.; Mr. Byron Baker, Ottawa, Ont.; Mr. Daniel W. Morrison, Glace Bay, N.S.; and Mr. Alfred Martin Boucher, Quebec, P.Q.

Employers' Delegate.—Major J. R. Roaf, Chairman, British Columbia Division of the Canadian Manufacturers' Association, Vancouver, B.C.

Technical Adviser to Employers' Delegate.—Mr. H. W. Macdonnell, Secretary, Industrial Relations Dept., Canadian Manufacturers' Association, Toronto, Ont.

Workers' Delegate.—Mr. Tom Moore, President, Trades and Labour Congress of Canada, Ottawa, Ont.

Technical Adviser to Workers' Delegate.—Mr. J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Outremont, Que.

Officers of the Conference

The following were elected as officers of the Conference:—

President.—Professor Ernest Mahaim, Belgian Government delegate, was unanimously elected.

Vice-Presidents.—Mr. Tchou, Government Delegate for China; Mr. Szydlowski, Employers' Delegate for Poland; and Mr. Suzuki, Workers' Delegate for Japan.

Secretary-General.—Mr. Albert Thomas, Director of the International Labour Office.

Deputy Secretary-General.—Mr. Harold B. Butler, Deputy-Director of the International Labour Office.

Appointment of Committees

Committees were appointed by the Conference as follows:—

Selection Committee.—Twenty-four members: 12 from the Government group, 6 from the Employers' group, and 6 from the Workers' group.

Credentials Committee.—Three members: one each from Government, Employers' and Workers' groups. (Appointed to examine the credentials of delegates and the protests received against certain nominations.)

Committee on Forced Labour.—Forty-five members: 15 from each group. (appointed to consider this question on the basis of the report presented by the International Labour Office.)

Committee on Hours of Work of Salaried Employees.—Sixty-eight members: 34 Government representatives, 17 employers' and 17 workers', each member of the last two groups having two votes.

Committee on Hours of Work in Coal Mines.—Forty-eight members: 16 from each group. (Appointed to consider the report submitted by the International Labour Office on this question.)

Committee on Reports under Article 408.—Thirty-six members: 12 from each group. (Appointed to consider the annual reports by States on measures taken to give effect to Draft Conventions ratified by them, these reports being summarized in the Director's Report to the Conference and accompanied by the findings of the Committee of Experts.)

Committee on Standing Orders.—Thirty members: 10 from each group. (Appointed to consider the report presented by the International Labour Office on various questions arising in connection with the Standing Orders of the Conference.)

Canada was represented on all but the second and third of the above-mentioned committees.

The President's Address

Professor Earnest Mahaim was unanimously elected president, his nomination being proposed by Miss Bondfield (Government, British Empire) supported by Mr. Jouhaux (workers, France) and by the representatives of Germany, Japan, Spain, Denmark and Chile.

The president in his address recalled the early efforts of the International Association for Labour Legislation, in which he had played an active part, and showed how they had paved for the foundation of the International Labour Organization. He summed up the results of the first ten years' activity of the Organization, both in building up an international labour code, and in cultivating and fertilizing public opinion by the distribution of knowledge. Looking to the future, he pointed to the need not only of certain improvements in the machinery of the Organization, but also of "right ways of thinking on the part of the State members."

The President thanked the Conference for the honour conferred on himself and his country, which claimed to be entitled to a place in the front rank of those who supported the International Labour Conference wholeheartedly.

Referring to his long association with international labour legislation, which began even before the foundation in 1900 of the International Association for Labour Legislation, he asked whether those who then dreamed of social progress imagined that within a generation international labour legislation could not merely come into existence, but could be ex-

tended to a large number of countries and offer the prospect of certain and unlimited development. It was the privilege of the International Association for Labour Legislation to start the movement of opinion in favour of such legislation, and, as a result, the idea gradually took shape and developed. The war upset the hopes of 1913, but did not check the development of the idea. On the contrary, the movement, which had previously been confined to individuals, now received the support of a new element of social force—the workers' organizations—and it was undoubtedly owing to their pressure that the Peace Conference set up the Committee which drafted Part XIII of the Treaty of Versailles, whereby the International Labour Organization was created.

The President called attention to some of the chief features of the new institution—its permanence as an association of States with its own constitution and its own system of law; its provision for collaboration between governments, employers and workers, without which the prestige, influence and efficiency of the Organization would never have been so great; the obligations it imposed on governments with regard to its Conventions; the universality of its composition; and, finally, the provision for the application of sanctions against States which did not give effect to Conventions they had ratified.

Some Results.—What use had been made of this machinery during the past ten years he asked. If was something to have obtained 29 Conventions and 33 Recommendations. Possibly it might be said that the total of 390 ratifications was relatively small. It had been shown, however, that this represented 62 per cent of the reasonable possibilities, and that was certainly a satisfactory proportion.

He himself attached even more importance to the relations which the whole world maintained with the International Labour Office, and to its authority, its confirmed and growing reputation. The measure of what had been achieved was to be found in the thousands of requests for information, proving each year the increasing need of the governments, administrations and industrial organizations for that full and accurate information which the Office alone could supply. It was to be found in the effects of the deliberations of the Conference, which could be felt in the most distant countries and even in States which were not members of the Organization. In such features could be found the growth of the idea, the diffusion of the conception of social justice, which was the necessary prelude to any positive legislative or administrative action. Before a law could be passed or a national institution created, public opinion must be aroused and persuaded of the necessity of action. It was in this way that the vital spark travelled from point to point to the confines of the earth.

"A True Labour Code".—After congratulating the Director on his success in putting together this incomparable machinery, and on the recognized scientific value of the publications of the Office and especially of the Director's annual report, the speaker proceeded to examine the international labour code constituted by the general body of Conventions and Recommendations adopted by successive Sessions of the Conference. While it could not, he said, be denied that there were gaps, and that certain reforms demanded by the enthusiasm of 1919 had not yet been secured, nevertheless a comparison with the initial program showed that all the important chapters of a true labour code had found some place in the Conventions and Recommendations. The protection of children, the protection of women, the safeguarding of workers' spare time, the campaign against unemployment, industrial hygiene, social insurance, equality of treatment of foreign and national workers, migration, factory inspection, and even wages—all these had formed the subject of decisions of the Conference. Thus, the strictly legislative work of the Organization was already extensive and varied.

The Future.—Turning to the problems of the future, the speaker expressed the opinion that the machinery of the Organization was a trifle unwieldy and presented certain defects, some of them serious. As Conventions became more numerous, the need for drafting them well was better understood. Clear, precise and simple wording was the most difficult thing in the world to achieve. This was the task of the committees of the Conference, and it was capable of improvement. A Convention ratified by several countries must be understood everywhere in the same way. There was need, therefore, of a means of arriving at an interpretation which should be as uniform as possible. This, he believed, could be achieved without the setting up of new machinery or the revision of the Peace Treaties. They had not yet exhausted all the resources placed at their disposal by the existing constitution, and particularly the possibilities of overcoming difficulties by the final articles of the Conventions. But the improvement of technical methods would never of itself suffice to fill the gaps or to overcome the defects in the Organization. The essential thing was to induce right ways of thinking. It was not

enough for States to come to the Conference and vote in favour of Conventions; there must be the will to ratify them.

"It must indeed be said," the President concluded, "that so long as there are children in the world whose life, whose physical intellectual and moral development is hampered, arrested and endangered by the obligation to work; so long as there are men and women whose inexperience, ignorance and weakness expose them to economic exploitation; so long as the dignity of human labour is unrecognized to such an extent that the product of labour does not permit the full life of a human being; so long as working conditions do not leave the noblest facilities scope for their essential development—so long must it be said that social justice has not been realized and that the International Labour Organization has still a duty to perform".

Address of Chairman of Governing Body

Mr. Arthur Fontaine (Government delegate, France), as Chairman of the Governing Body of the International Labour Office, presided at the opening of the Conference. He welcomed the delegates of the 51 States represented. This was the highest number of States Members which had ever taken part in a session of the Conference. He welcomed particularly the delegation from New Zealand, which was present for the first time. Only three States Members were not represented: Argentina, Salvador and Abyssinia. Norway, though not represented by a delegation, had sent an observer. Observers were also present from several States not Members of the Organization, including, for the first time, Mexico. In all, the 51 States had sent 86 Government delegates, 35 employers' and 35 workers'. There were therefore 35 complete delegations, while the 16 which consisted only of Government representatives came from States whose industrial importance was still small.

Looking back over the past ten years, he thought the Conference had reason for gratification at the results obtained and in prospect. It was true that there were shadows in the picture, but, generally speaking, there had been solid progress towards social justice and peace.

Proceeding, the speaker briefly reviewed the agenda of the present session, and laid stress on the special circumstances in which the question of hours of work in coal mines was placed before the Conference. After calling attention to the chief social, technical and economic aspects of this problem, he pointed out that it was for the Conference itself to determine whether the subject was ripe for decision at this session. It was probable that no European state would agree to bind itself unless its principal European competitors gave the same undertaking at the same time. This situation would probably lead to the insertion in the proposed Convention of a special clause. There appeared to be no difficulty in that respect. The rules of the Organization, however, made it impossible either to limit the Conference or to open the Convention to certain countries only. He hoped that, in the interests of the miners, the proposed Convention would be adopted and widely ratified.

Discussion of Director's Report

The Annual Report of the Director, a summary of which appears at the end of the present article, was under discussion in the Conference at successive sittings from June 16 to June 21. During this discussion, 46 speeches were made by spokesmen for the Governments, employers or workers of 26 out of the 51 countries represented at the Conference. A number of subjects were touched on and the work of the Organization came under critical examination in certain respects.

During the discussion, Mr. Gerald H. Brown (Government, Canada), after announcing that the Parliament of Canada had recently granted the eight-hour day to all federal employees and required its application to federal public works, in accordance with the Hours Convention, recalled the statement made at previous sessions as to the difficulties experienced in Canada in ratifying Conventions which dealt with matters within provincial jurisdiction. In this connection, he suggested that an effort should be made to show, in the periodical chart published by the Office dealing with ratifications, the extent to which the individual Conventions were applied in the different provinces of Canada and in the states of other federal countries. He also suggested that more precise information should be given in the Director's Report as to the countries which had definitely accepted and applied the Recommendations adopted by the Conferences.

Mr. J. R. Roaf (Employers, Canada) spoke of the economic disadvantage at which Member States might be placed by the competition of States which were not Members of the Organization and were not bound by its Conventions. He referred mainly to the United States, with which country the manufacturers in Canada had to be in competition day by day. Hours of labour, whether for manual workers, salaried employees, or coal miners in

particular, should be governed to a great extent by the hours of labour prevailing in countries which did not form part of the Organization.

Other suggestions and criticisms made during the debate were: that there were not sufficient direct contacts between Geneva and India, by correspondence offices, by the inclusion of more Indians on the staff of the Office, and by the representation of Indian employers on the Governing Body of the Office, and that steps should be taken to bring the Indian States into line with British India as regards labour conditions; that the Organization should give the closest attention to the efforts which were being made to find solutions for the general problems involved in the present economic situation; that the Organization should take a more active part in dealing with the agricultural problem; that the Governing Body should examine what measures could be taken to recall to Governments their duty with regard to the Recommendation of 1919 concerning unemployment insurance.

Mr. Albert Thomas, Director of the International Labour Office, in his reply on June 23, confined himself to some of the most salient features of the debate. Among these, he called attention to the many signs of the steady progress of the Organization, and the large measure of public confidence which it enjoyed. The real problem now, he said, was whether the Organization would have the necessary strength and resources to respond to all the appeals which were being made to it, and so retain the confidence reposed in it. Renewed efforts and possibly fresh methods were necessary to secure the ratification and application of Conventions. Account must be taken of the tendency towards regionalism which was discernible nowadays in Asia, in the Pacific countries, in South America and in Europe. The Organization, while maintaining the universal basis on which it was established by the Peace Treaties, must have a share in these regional movements. Further problems were created by the fact that the Organization, though universal, was sometimes called on to deal with special questions not of direct interest to all its component States; for example, forced labour, conditions of work in coal mines, and conditions of labour of seafarers. New methods must be found to solve these constitutional problems, and it was for this reason that an experiment had been made this year by the holding of the Preparatory Technical Conference on conditions of work in mines. The Director stated that this "auxiliary" procedure was purely tentative, and not intended to supersede or encroach upon the normal procedure laid down in the Peace Treaties. Progress could only be made by experiment, with the consent of all parties, animated by a determination to surmount obstacles. The present world-wide economic crisis undoubtedly gave rise to anxiety and called for energetic action. The Organization must study economic difficulties, and take account of their bearing on social progress, but economic circumstances must not be allowed to constitute an insuperable barrier to social reform, rather, the study of such obstacles must be directed towards overcoming and removing them.

The Director accepted the suggestion that had been made by Mr. Brown (Government delegate, Canada) above referred to.

TEXT OF THE DRAFT CONVENTION CONCERNING THE REGULATION OF HOURS OF WORK IN COMMERCE AND OFFICES

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on June 10, 1930, and

Having decided upon the adoption of certain proposals with regard to the regulation of hours of work in commerce and offices, which is included in the second item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts, this 28th day of June of the year one thousand nine hundred and thirty, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1

1. This Convention shall apply to persons employed in the following establishments, whether public or private:

(*a*) commercial or trading establishments, including postal, telegraph and telephone services and commercial or trading branches of any other establishments;

(*b*) establishments and administrative services in which the persons employed are mainly engaged in office work;

(*c*) mixed commercial and industrial establishments, unless they are deemed to be industrial establishments.

The competent authority in each country shall define the line which separates commercial and trading establishments, and establishments in which the persons employed are mainly engaged in office work, from industrial and agricultural establishments.

2. The Convention shall not apply to persons employed in the following establishments:

(*a*) establishments for the treatment or the care of the sick, infirm, destitute, or mentally unfit;
(*b*) hotels, restaurants, boarding-houses, clubs, cafés and other refreshment houses;
(*c*) theatres and places of public amusement.

The Convention shall nevertheless apply;

To persons employed in branches of the establishments mentioned in (*a*), (*b*), (*c*) in cases where such branches would, if they were independant undertakings, be included among the establishments to which the Convention applies.

3. It shall be open to the competent authority in each country to exempt from the application of the Convention:

(*a*) establishments in which only members of the employer's family are employed;
(*b*) offices in which the staff is engaged in connection with the administration of public authority;
(*c*) persons occupying positions of management or employed in a confidential capacity;
(*d*) travellers and representatives, in so far as they carry on their work outside the establishment.

Article 2

For the purpose of this Convention the term "hours of work" means the time during which the persons employed are at the disposal of the employer; it does not include rest periods during which the persons employed are not at the disposal of the employer.

Article 3

The hours of work of persons to whom this Convention applies shall not exceed forty-eight hours in the week and eight hours in the day, except as herein after otherwise provided.

Article 4

The maximum hours of work in the week laid down in Article 3 may be so arranged that hours of work in any day do not exceed ten hours.

Article 5

1. In case of a general interruption of work due to (*a*) local holidays, or (*b*) accidents or *force majeure* (accidents to plant, interruption of power, light, heating or water, or occurrences causing serious material damage to the establishment), hours of work in the day may be increased for the purpose of making up the hours of work which have been lost, provided that the following conditions are complied with:

(*a*) hours of work which have been lost shall not be allowed to be made up on more than thirty days in the year and shall be made up within a reasonable lapse of time;
(*b*) the increase in hours of work in the day shall not exceed one hour;
(*c*) hours of work in the day shall not exceed ten.

2. The competent authority shall be notified of the nature, cause and date of the general interruption of work, of the number of hours of work which have been lost, and of the temporary alterations provided for in the working time-table.

10067—5

Article 6

In exceptional cases where the circumstances in which the work has to be carried on make the provisions of Articles 3 and 4 inapplicable, regulations made by public authority may permit hours of work to be distributed over a period longer than the week, provided that the average hours of work over the number of weeks included in the period do not exceed forty-eight hours in the week and that hours of work in any day do not exceed ten hours.

Article 7

Regulations made by public authority shall determine:

1. The permanent exceptions which may be allowed for:

(*a*) certain classes of persons whose work is inherently intermittent, such as caretakers and persons employed to look after working premises and warehouses;
(*b*) classes of persons directly engaged in preparatory or complementary work which must necessarily be carried on outside the limits laid down for the hours of work of the rest of the persons employed in the establishment;
(*c*) shops and other establishments where the nature of the work, the size of the population or the number of persons employed render inapplicable the working hours fixed in Articles 3 and 4.

2. The temporary exceptions which may be granted in the following cases:

(*a*) in case of accident, actual or threatened, *force majeure*, or urgent work to machinery or plant, but only so far as may be necessary to avoid serious interference with the ordinary working of the establishment;
(*b*) in order to prevent the loss of perishable goods or avoid endangering the technical results of the work;
(*c*) in order to allow for special work such as stocktaking and the preparation of balance sheets, settlement days, liquidations, and the balancing and closing of accounts;
(*d*) in order to enable establishments to deal with cases of abnormal pressure of work due to special circumstances, in so far as the employer cannot ordinarily be expected to resort to other measures.

3. Save as regards paragraph (2) (*a*), the regulations made under this Article shall determine the number of additional hours of work which may be allowed in the day and, in respect of temporary exceptions, in the year. The rate of pay for the additional hours of work permitted under paragraph 2 (*b*), (*c*) and (*d*) of this Article shall not be less than one-and-a quarter times the regular rate.

Article 8

The regulations provided for in Articles 6 and 7 shall be made after consultation with the workers' and employers' organizations concerned, special regard being paid to collective agreements, if any, existing between such workers' and employers' organizations.

Article 9

The operation of the provisions of this Convention may be suspended in any country by the Government in the event of war or other emergency endangering national safety.

Article 10

1. Nothing in this Convention shall affect any custom or agreement whereby shorter hours are worked or higher rates of remuneration are paid than those provided by this Convention.

2. Any restrictions imposed by this Convention shall be in addition to and not in derogation of any other restrictions imposed by any law, order or regulation which fixes a lower maximum number of hours of employment or a higher rate of remuneration than those provided by this Convention.

Article 11

For the effective enforcement of the provisions of this Convention,

1. The necessary measures shall be taken to ensure adequate inspection.

2. Every employer shall be required:

(*a*) to notify, by the posting of notices in conspicuous positions in the establishment or other suitable place, or by such method as may be approved by the competent authority, the times at which hours of work begin and end, and, where work is carried on by shifts, the times at which each shift begins and ends;

(*b*) to notify in the same way the rest periods, granted to the persons employed which, in accordance with Article 2, are not included in the hours of work;

(*c*) to keep a record in the form prescribed by the competent authority of all additional hours of work performed in pursuance of paragraph 2 of Article 7 and of the payments made in respect thereof.

3. It shall be made an offence to employ any person outside the times fixed in accordance with paragraph 2 (*a*) or during the periods fixed in accordance with paragraph 2 (*b*) of this Article.

Article 12

Each Member which ratifies this Convention shall take the necessary measures in the form of penalties to ensure that the provisions of the Convention are enforced.

Article 13

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles, and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 14

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 15

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 16

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

Article 17

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

Article 18

Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention shall *ipso jure* involve denunciation of this Convention without any requirement of delay, notwithstanding the provisions of Article 16 above, if and when the new revising Convention shall have come into force.

As from the date of the coming into force of the new revising Convention, the present Convention shall cease to be open to ratification by the Members.

Nevertheless, this Convention shall remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 19

The French and English texts of this Convention shall both be authentic.

TEXT OF THE RECOMMENDATION CONCERNING THE REGULATION OF HOURS OF WORK IN HOTELS, RESTAURANTS AND SIMILAR ESTABLISHMENTS

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on 10 June 1930, and

Having decided upon the adoption of certain proposals with regard to hours of work in hotels, restaurants and similar establishments, which is included in the second item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a recommendation,

adopts, this 28th day of June of the year one Recommendation, to be submitted to the Members of the International Labour Organization for consideration, with a view to effect being given to it by national legislation or otherwise, in accordance with the provision of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace;

Having adopted a Draft Convention concerning the regulation of hours of work in commerce and offices; and

Wishing to extend subsequently the application of the rules laid down in the said Draft Convention to as many classes of establishments as possible, including hotels, restaurants and similar establishments;

The Conference recommends:

1. That those Members in which no statutory regulation yet exists of the hours of work of persons employed in hotels, restaurants, boarding houses, clubs, cafés and similar establishments which are exclusively or mainly engaged in providing board and lodging or supplying refreshments for consumption on the premises, should make special investigations into the conditions obtaining in these establishments, in the light of the rules laid down in the above-mentioned Draft Convention.

2. That those Members in which statutory regulation of the hours of work of the said persons already exists should make special investigations into the application of the regulations, in the light of the rules laid down in the Draft Convention in question; and

3. That in both cases the Members should, within four years of the adoption of this Recommendation, communicate to the International Labour Office, on a uniform plan to be approved by the Governing Body, full information as to the results of the investigation, so that a special report may be prepared by the Office as a basis for considering the desirability of placing the question of the hours of work of persons employed in the establishments concerned on the Agenda of a subsequent Session of the Conference, with a view to the adoption of a Draft Convention.

TEXT OF THE RECOMMENDATION CONCERNING THE REGULATION OF HOURS OF WORK IN THEATRES AND OTHER PLACES OF PUBLIC AMUSEMENT

The General Conference of the International Labour Organization of the League of Nations.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on June 10, 1930, and

Having decided upon the adoption of certain proposals with regard to the regulation of hours of work in theatres and other places of public amusement, which is included in the second item of the Agenda of the Session, and

Having determined that these proposals should take the form of a recommendation,

adopts, this 28th day of June of the year one thousand nine hundred and thirty, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration, with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Having adopted a Draft Convention concerning the regulation of hours of work in commerce and offices; and

Wishing to extend subsequently the application of the rules laid down in the said Draft Convention to as many classes of establishments as possible, including theatres and other places of public amusement;

The Conference recommends:

1. That those Members in which no statutory regulation yet exists of the hours of work of persons employed in theatres, music halls, cinemas and places of public amusement generally, whether indoor or outdoor, should make special investigations into the conditions obtaining in these establishments, in the light of the rules laid down in the above-mentioned Draft Convention;

2. That those Members in which statutory regulation of the hours of work of the said persons already exists should make special investigations into the application of the regulations, in the light of the rules laid down in the Draft Convention in question; and

3. That in both cases the Members should, within four years of the adoption of this Recommendation, communicate to the International Labour Office, on a uniform plan to be approved by the Governing Body, full information as to the results of the investigations, so that a special report may be prepared by the Office as a basis for considering the desirability of placing the question of the hours of work of persons employed in the establishments concerned on the Agenda of a subsequent Session of the Conference, with a view of the adoption of a Draft Convention.

TEXT OF THE RECOMMENDATION CONCERNING THE REGULATION OF HOURS OF WORK IN ESTABLISHMENTS FOR THE CARE OF THE SICK, INFIRM, DESTITUTE OR MENTALLY UNFIT

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on June 10, 1930, and

Having decided upon the adoption of certain proposals with regard to the regulation of hours of work in establishments for the treatment or the care of the sick, infirm, destitute or metally unfit, which is included in the second item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a recommendation,

adopts, this 28th day of June of the year one thousand nine hundred and thirty, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration, with a view to effect being given to it by national legislation or other-

10067—5½

wise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace;

Having adopted a Draft Convention concerning the regulation of hours of work in commerce and offices; and

Wishing to extend such regulations to as many classes of establishments as possible, including establishments for the treatment or the care of the sick, infirm, destitute or mentally unfit.

The Conference recommends:

1. That those Members in which no statutory regulations yet exist on the hours of work of persons employed in establishments for the treatment or the care of the sick, infirm, destitute or mentally unfit, should make special investigations into the conditions obtaining in these establishments, in the light of the rules laid down in the above-mentioned Draft Convention;

2. That those Members in which statutory regulation of the hours of work of the said persons already exists should make special investigations into the application of the regulations, in the light of the rules laid down in the Draft Convention in question; and

3. That in both cases the Members should, within four years of the adoption of this Recommendation, communicate to the International Labour Office, on a uniform plan to be approved by the Governing Body, full information as to the results of the investigations, so that a special report may be prepared by the Office as a basis for considering the desirability of placing the question of the hours of work of persons employed in the establishments concerned on the Agenda of a subsequent Session of the Conference, with a view to the adoption of a Draft Convention.

TEXT OF THE DRAFT CONVENTION CONCERNING FORCED OR COMPULSORY LABOUR

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on June 10, 1930, and

Having decided upon the adoption of certain proposals with regard to forced or compulsory labour which is included in the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international Convention,

adopts, this 29th day of June of the year one thousand nine hundred and thirty, the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1

Each Member of the International Labour Organization which ratifies this Convention undertakes to suppress the use of forced or compulsory labour in all its forms within the shortest possible period.

With a view to this complete suppression, recourse to forced or compulsory labour may be had, during the transitional period, for public purposes only and as an exceptional measure, subject to the conditions and guarantees hereinafter provided.

At the expiration of a period of five years after the coming into force of this Convention, and when the Governing Body of the International Labour Office prepares the report provided for in Article 31 below, the said Governing Body shall consider the possibility of the suppression of forced or compulsory labour in all its forms without a further transitional period and the desirability of placing this question on the Agenda of the Conference.

Article 2

For the purposes of this Convention the term "forced or compulsory labour" shall mean all work or service which is exacted from any person under the menace of any penalty and for which the said person has not offered himself voluntarily.

Nevertheless, for the purposes of this Convention, the term "forced or compulsory labour" shall not include:

(*a*) any work or service exacted in virtue of compulsory military service laws for work of a purely military character;

(*b*) any work or service which forms part of the normal civic obligations of the citizens of a fully self-governing country;

(*c*) any work or service exacted from any person as a consequence of a conviction in a court of law, provided that the said work or service is carried out under the supervision and control of a public authority and that the said person is not hired to or placed at the disposal of private individuals, companies or associations;

(*d*) any work or service exacted in cases of emergency, that is to say, in the event of war or of a calamity or threatened calamity, such as fire, flood, famine, earthquake, violent epidemic or epizootic diseases, invasion by animal, insect or vegetable pests, and in general any circumstance that would endanger the existence or the well-being of the whole or part of the population;

(*e*) minor communal services of a kind which, being performed by the members of the community in the direct interest of the said community, can therefore be considered as normal civic obligations incumbent upon the members of the community, provided that the members of the community or their direct representatives shall have the right to be consulted in regard to the need for such services.

Article 3

For the purposes of this Convention the term "competent authority" shall mean either an authority of the metropolitan country or the highest central authority in the territory concerned.

Article 4

The competent authority shall not impose or permit the imposition of forced or compulsory labour for the benefit of private individuals, companies or associations.

Where such forced or compulsory labour for the benefit of private individuals, companies or associations exists at the date on which a Member's ratification of this Convention is registered by the Secretary-General of the League of Nations, the Member shall completely suppress such forced or compulsory labour from the date on which this Convention comes into force for that Member.

Article 5

No concession granted to private individuals, companies or associations shall involve any form of forced or compulsory labour for the production or the collection of products which such private individuals, companies or associations utilize or in which they trade.

Where concessions exist containing provisions involving such forced or compulsory labour, such provisions shall be rescinded as soon as possible, in order to comply with Article 1 of this Convention.

Article 6

Officials of the administration, even when they have the duty of encouraging the populations under their charge to engage in some form of labour, shall not put constraint upon the said populations or upon any individual members thereof to work for private individuals, companies or associations.

Article 7

Chiefs who do not exercise administrative functions shall not have recourse to forced or compulsory labour.

Chiefs who exercise administrative functions may, with the express permission of the competent authority, have recourse to forced or compulsory labour, subject to the provisions of Article 10 of this Convention.

Chiefs who are duly recognized and who do not receive adequate remuneration in other form, may have the enjoyment of personal services, subject to due regulations and provided that all necessary measures are taken to prevent abuses.

Article 8

The responsibility for every decision to have recourse to forced or compulsory labour shall rest with highest civil authority in the territory concerned.

Nevtreheless, that authority may delegate powers to highest local authorities to exact forced or compulsory labour which does not involve the removal of the workers from their place of habitual residence. That authority may also delegate, for such periods and subject to such conditions as may be laid down in the regulations provided for in Article 23 of this Convention, powers to highest local authorities to exact forced or compulsory labour which involves the removal of the workers from their place of habitual residence for the purpose of facilitating the movement of officials of the administration. when on duty, and for the transport of Government stores.

Article 9

Except as otherwise provided for in Article 10 of this Convention, any authority competent to exact forced or compulsory labour shall, before deciding to have recourse to such labour, satisfy itself:

(*a*) that the work to be done or the service to be rendered is of important direct interest for the community called upon to do the work or render the service;
(*b*) that the work or service is of present or imminent necessity;
(*c*) that it has been impossible to obtain voluntary labour for carrying out the work or rendering the service by the offer of the rates of wages and conditions of labour not less favourable than those prevailing in the area concerned for similar work or service; and
(*d*) that the work or service will not lay too heavy a burden upon the present population, having regard to the labour available and its capacity to undertake the work.

Article 10

Forced or compulsory labour exacted as a tax and forced or compulsory labour to which recourse is had for the execution of public works by chiefs who exercise administrative functions shall be progressively abolished.

Meanwhile, where forced or compulsory labour is exacted as a tax, and where recourse is had to forced or compulsory labour for the execution of public works, by chiefs who exercise administrative functions, the authority concerned shall first satisfy itself:

(*a*) that the work to be done or the service to be rendered is of important direct interest for the community called upon to do the work or render the service;
(*b*) that the work or the service is of present or imminent necessity;
(*c*) that the work or service will not lay too heavy a burden upon the present population, having regard to the labour available and its capacity to undertake the work;
(*d*) that the work or service will not entail the removal of the workers from their place of habitual residence;
(*e*) that the execution of the work or the rendering of the service wil be directed in accordance with the exigencies of religion, social life and agriculture.

Article 11

Only adult able-bodied males who are of an apparent age of not less than 18 and not more than 45 years may be called upon for forced or compulsory labour. Except in respect of the kinds of labour provided for in Article 10 of this Convention, the following limitations and conditions shall apply:

(*a*) whenever possible prior determination by a medical officer appointed by the administration that the persons concerned are not suffering from any infectious or contagious disease and that they are physically fit for the work required and for the conditions under which it is to be carried out;
(*b*) exemption of school teachers and pupils and of officials of the administration in general;
(*c*) the maintenance in each community of the number of adult able-bodied men indispensable for family and social life;
(*d*) respect for conjugal and family ties.

For the purposes of sub-paragraph (*c*) of the preceding paragraph, the regulations provided for in Article 23 of this Convention shall

fix the proportion of the resident adult able-bodied males who may be taken at any one time for forced or compulsory labour, provided always that this proportion shall in no case exceed 25 per cent. In fixing this proportion the competent authority shall take account of the density of the population, of its social and physical development, of the seasons, and of the work which must be done by the persons concerned on their own behalf in their locality, and, generally, shall have regard to the economic and social interests of the normal life of the community concerned.

Article 12

The maximum period for which any person may be taken for forced or compulsory labour of all kinds in any one period of 12 months, shall not exceed 60 days, including the time spent in going to and from the place of work.

Every person from whom forced or compulsory labour is exacted shall be furnished with a certificate indicating the periods of such labour which he has completed.

Article 13

The normal working hours of any person from whom forced or compulsory labour is exacted shall be the same as those prevailing in the case of voluntary labour, and the hours worked in excess of the normal working hours shall be remunerated at the rates prevailing in the case of overtime for voluntary labour.

A weekly day of rest shall be granted to all persons from whom forced or compulsory labour of any kind is exacted and this day shall coincide as far as possible with the day fixed by tradition or custom in the territories or regions concerned.

Article 14

With the exception of the forced or compulsory labour provided for in Article 10 of this Convention, forced or compulsory labour of all kinds shall be remunerated in cash at rates not less than those prevailing for similar kinds of work either in the district in which the labour is employed or in the district from which the labour is recruited, whichever may be the higher.

In the case of labour to which recourse is had by chiefs in the exercise of their administrative functions, payment of wages in accordance with the provisions of the preceding paragraph shall be introduced as soon as possible.

The wages shall be paid to each worker individually and not to his tribal chief or to any other authority.

For the purpose of payment of wages the days spent in travelling to and from the place of work shall be counted as working days.

Nothing in this Article shall prevent ordinary rations being given as a part of wages, such rations to be at least equivalent in value to the money payment they are taken to represent, but deductions from wages shall not be made either for the payment of taxes or for special food, clothing or accommodation supplied to a worker for the purpose of maintaining him in a fit condition to carry on his work under the special conditions of any employment, or for the supply of tools.

Article 15

Any laws or regulations relating to workmen's compensation for accidents or sickness arising out of the employment of the worker and any laws or regulations providing compensation for the dependants of deceased or incapacitated workers which are or shall be in force in the territory concerned, shall be equally applicable to persons from whom forced or compulsory labour is exacted and to voluntary workers.

In any case it shall be an obligation on any authority employing any worker on forced or compulsory labour to ensure the subsistence of any such worker who, by accident or sickness arising out of his employment, is rendered wholly or partially incapable of providing for himself; and to take measures to ensure the maintenance of any persons actually dependent upon such a worker in the event of his incapacity or decease arising out of his employment.

Article 16

Except in cases of special necessity, persons from whom forced or compulsory labour is exacted shall not be transferred to districts where the food and climate differ so considerably from those to which they have been accustomed as to endanger their health.

In no case shall the transfer of such workers be permitted unless all measures relating to hygiene and accommodation which are necessary to adapt such workers to the conditions and to safeguard their health can be strictly applied.

When such transfer cannot be avoided, measures of gradual habituation to the new conditions of diet and of climate shall be adopted on competent medical advice.

In cases where such workers are required to perform regular work to which they are not accustomed, measures shall be taken to ensure their habituation to it, especially as regards progressive training, the hours of work and the provision of rest intervals, and any increase or amelioration of diet which may be necessary.

Article 17

Before permitting recourse to forced or compulsory labour for works of construction or maintenance which entails the workers remaining at the workplaces for considerable periods, the competent authority shall satisfy itself:

(1) that all necessary measures are taken to safeguard the health of the workers and to guarantee the necessary medical care, and, in particular, (*a*) that the workers are medically examined before commencing the work and at fixed intervals during the period of service, (*b*) that there is an adequate medical staff, provided with the dispensaries, infirmaries, hospitals and equipment necessary to meet all requirements, and (*c*) that the sanitary conditions of the workplaces, the supply of drinking water, food, fuel, and cooking utensils, and, where necessary, of housing and clothing, are satisfactory;

(2) that definite arrangements are made to ensure the subsistence of the families of the workers, in particular by facilitating the remittance, by a safe method, of part of the wages to the family, at the request or with the consent of the workers;

(3) that the journeys of the workers to and from the workplaces are made at the expense and under the responsibility of the administration, which shall facilitate

such journeys by making the fullest use of all available means of transport;

(4) that, in case of illness or accident causing incapacity to work of a certain duration, the worker is repatriated at the expense of the administration;

(5) that any worker who may wish to remain as a voluntary worker at the end of his period of forced or compulsory labour is permitted to do so without, for a period of two years, losing his right to repatriation free of expense to himself.

Article 18

Forced or compulsory labour for the transport of persons or goods, such as the labour of porters or boatmen, shall be abolished within the shortest possible period. Meanwhile the competent authority shall promulgate regulations determining, *inter alia*, (*a*) that such labour shall only be employed for the purpose of facilitating the movement of officials of the administration, when on duty, or for the transport of Government stores or, in case of very urgent necessity, the transport of persons other than officials, (*b*) that the workers so employed shall be medically certified to be physically fit, where medical examination is possible, and that where such medical examination is not practicable the person employing such workers shall be held responsible for ensuring that they are physically fit and not suffering from any infectious or contagious disease, (*c*) the maximum load which these workers may carry, (*d*) the maximum distance from their homes to which they may be taken, (*e*) the maximum number of days per month or other period for which they may be taken, including the days spent in returning to their homes, and (*f*) the persons entitled to demand this form of forced or compulsory labour and the extent to which they are entitled to demand it.

In fixing the maxima referred to under (*c*), (*d*) and (*e*) in the foregoing paragraph, the competent authority shall have regard to all relevant factors, including the physical development of the population from which the workers are recruited, the nature of the country through which they must travel and the climatic conditions.

The competent authority shall further provide that the normal daily journey of such workers shall not exceed a distance corresponding to an average working day of eight hours, it being understood that account shall be taken not only of the weight to be carried and the distance to be covered, but also of the nature of the road, the season and all other relevant factors, and that, where hours of journey in excess of the normal daily journey are exacted, they shall be remunerated at rates higher than the normal rates.

Article 19

The competent authority shall only authorize recourse to compulsory cultivation as a method of precaution against famine or a deficiency of food supplies and always under the condition that the food or produce shall remain the property of the individuals or the community producing it.

Nothing in this Article shall be construed as abrogating the obligation on members of a community, where production is organized on a communal basis by virtue of law or custom and where the produce or any profit accruing from the sale thereof remain the property of the community, to perform the work demanded by the community by virtue of law or custom.

Article 20

Collective punishment laws under which a community may be punished for crimes committed by any of its members shall not contain provisions for forced or compulsory labour by the community as one of the methods of punishment.

Article 21

Forced or compulsory labour shall not be used for work underground in mines.

Article 22

The annual reports that Members which ratify this Convention agree to make to the International Labour Office, pursuant to the provisions of Article 408 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace, on the measures they have taken to give effect to the provisions of this Convention, shall contain as full information as possible, in respect of each territory concerned, regarding the extent to which recourse has been had to forced or compulsory labour in that territory, the purposes for which it has been employed, the sickness and death rates, hours of work, methods of payment of wages and rates of wages, and any other relevant information.

Article 23

To give effect to the provisions of this Convention the competent authority shall issue complete and precise regulations governing the use of forced or compulsory labour.

These regulations shall contain, *inter alia*, rules permitting any person from whom forced or compulsorw labour is exacted to forward all complaints relative to the conditions of labour to the authorities and ensuring that such complaints will be examined and taken into consideration.

Article 24

Adequate measures shall in all cases be taken to ensure that the regulations governing the employment of forced or compulsory labour are strictly applied, either by extending the duties of any existing labour inspectorate which has been established for the inspection of voluntary labour to cover the inspection of forced or compulsory labour or in some other appropriate manner. Measures shall also be taken to ensure that the regulations are brought to the knowledge of persons from whom such labour is exacted.

Article 25

The illegal exaction of forced or compulsory labour shall be punishable as a penal offence, and it shall be an obligation on any Member ratifying this Convention to ensure that the penalties imposed by law are really adequate and are strictly enforced.

Article 26

Each Member of the International Labour Organization which ratifies this Convention undertakes to apply it to the territories placed under its sovereignty, jurisdiction, protection,

suzerainty, tutelage or authority, so far as it has the right to accept obligations affecting matters of internal jurisdiction; provided that, if such Member may desire to take advantage of the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace, it shall append to its ratification a declaration stating:

(1) the territories to which it intends to apply the provisions of this Convention without modification;
(2) the territories to which it intends to apply the provisions of this Convention with modifications together with details of the said modifications;
(3) the territories in respect of which it reserves its decision.

The aforesaid declaration shall be deemed to be an integral part of the ratification and shall have the force of ratification. It shall be open to any Member, by a subsequent declaration, to cancel in whole or in part the reservations made, in pursuance of the provisions of sub-paragraphs (2) and (3) of this Article, in the original declaration.

Article 27

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and in the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Articles 28

This Convention shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

It shall come into force twelve months after the date on which the ratifications of two Members of the International Labour Organization have been registered with the Secretary-General.

Thereafter, this Convention shall come into force for any Member twelve months after the date on which the ratification has been registered.

Article 29

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 30

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

Article 31

At the expiration of each period of five years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision in whole or in part.

Article 32

Should the Conference adopt a new Convention revising this Convention in whole or in part, the ratification by a Member of the new revising Convention shall *ipso jure* involve denunciation of this Convention without any requirement of delay, notwithstanding the provisions of Article 30 above, if and when the new revising Convention shall have come into force.

As from the date of the coming into force of the new revising Convention, the present Convention shall cease to be open to ratification by the Members.

Nevertheless, this Convention shall remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 33

The French and English texts of this Convention shall both be authentic.

TEXT OF THE RECOMMENDATION CONCERNING INDIRECT COMPULSION TO LABOUR

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on 10 June 1930, and

Having decided upon the adoption of certain proposals with regard to indirect compulsion to labour, which is included in the first item of the Agenda of the Session, and

Having determined that these proposals should take the form of a Recommendation,

adopts, this 29th day of June of the year one thousand nine hundred and thirty, the following Recommendations, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Having adopted a Draft Convention concerning forced or compulsory labour, and

Desiring to supplement this Draft Convention by a statement of the principles which appear best fitted to guide the policy of the Members in endeavouring to avoid any indirect compulsion to labour which would lay too heavy a burden upon the populations of territories to which the Draft Convention may apply.

The Conference recommends that each Member should take the following principles into consideration:

I.

The amount of labour available, the capacities for labour of the population, and the evil effects which too sudden changes in the habits of life and labour may have on the social conditions of the population, are factors which should be taken into consideration in deciding questions connected with the economic development of territories in a primitive stage of development, and, in particular, when deciding upon:

(a) increases in the number and extent of industrial, mining and agricultural undertakings in such territories;

(b) the non-indigenous settlement, if any, which is to be permitted;

(c) the granting of forest or other concessions, with or without the character of monopolies.

II.

The desirability of avoiding indirect means of artificially increasing the economic pressure upon populations to seek wage-earning employment, and particularly such means as:

(*a*) imposing such taxation upon populations as would have the effect of compelling them to seek wage-earning employment with private undertakings;

(*b*) imposing such restrictions on the possession, occupation, or use of land as would have the effect of rendering difficult the gaining of a living by independent cultivation;

(*c*) extending abusively the generally accepted meaning of vagrancy;

(*d*) adopting such pass laws as would have the effect of placing workers in the service of others in a position of advantage as compared with that of other workers.

III

The desirability of avoiding any restrictions on the voluntary flow of labour from one form of employment to another or from one district to another which might have the indirect effect of compelling workers to take employment in particular industries or districts, except where such restrictions are considered necessary in the interest of the population or of the workers concerned.

TEXT OF THE RECOMMENDATION CONCERNING THE REGULATION OF FORCED OR COMPULSORY LABOUR

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Fourteenth Session on June 10, 1930, and

Having decided upon the adoption of certain proposals with regard to the regulation of forced or compulsory labour, which is included in the first item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts, this 29th day of June of the year one thousand nine hundred and thirty, the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Having adopted a Draft Convention concerning forced or compulsory labour, and

Desiring to give expression to certain principles and rules relating to forced or compulsory labour which appear to be of a nature to render the application of the said Draft Convention more effective,

The Conference recommends that each Member should take the following principles and rules into consideration:

I

Any regulations issued in application of the Draft Convention concerning forced or compulsory labour, as well as any other legal provisions or administrative orders, existing at the time of the ratification of the said Draft Convention or thereafter enacted, governing the employment of forced or compulsory labour, including any laws or administrative orders concerning compensation or indemnification for sickness, injury to, or death of workers taken for forced or compulsory labour, should be printed by the competent authority in such one or more native languages as will convey their import to the workers concerned and to the population from which the workers are to be drawn. Such printed texts should be widely exhibited and, if necessary, arrangements made for their oral communication to the workers and to the population concerned; copies should also be made available to the workers concerned and to others at cost price.

II

Recourse to forced or compulsory labour should be so regulated as not to imperil the food supply of the community concerned.

III

When recourse is had to forced or compulsory labour all possible measures should be taken to ensure that the imposition of such labour in no case leads indirectly to the illegal employment of women and children on forced or compulsory labour.

IV

All possible measures should be taken to reduce the necessity for recourse to forced or compulsory labour for the transport of persons or goods. Such recourse should be prohibited when and where animal or mechanical transport is available.

V

All possible steps should be taken to see that no alcoholic temptations are placed in the way of workers engaged in forced or compulsory labour.

RESOLUTION CONCERNING THE PREPARATION OF CHILDREN AND YOUNG PERSONS FOR A FULLY DEVELOPED LIFE

Whereas in 1924 the Conference, conforming with the general principles affirmed in Article 427 of the Treaty of Peace, declared, in its Recommendation concerning the utilization of workers' spare time, that the workers should have the opportunity of developing their intellectual and moral as well as their physical powers, so that they could live lives worthy of human beings;

Whereas access to the vast field of human knowledge would be rendered easier for them during their working life if it was possible for them to acquire sufficient knowledge in their youth, and premature admission to employment cannot but arrest their physical development and delay or arrest their mental development;

Whereas a very considerable number of the States Members of the International Labour Organization have not yet ratified the Draft Conventions which the Conference has adopted for the purpose of furthering this preparation of children and young persons for a life useful to themselves and beneficial to society; and

Whereas proposals to establish concordance between the upper age limit for compulsory school attendance and the age for admission to employment as fixed by the said Draft Conventions have met with certain obstacles in different countries;

The Conference invites the Governing Body of the International Labour Office;

(1) To explore the means of hastening and generalizing ratification of the aforesaid Draft Conventions;

(2) To investigate the other means of ensuring the proper protection of the health of children and young persons of enabling their aptitudes to attain their full development, and of preparing them for a really human life by physical and mental education and by a suitable general and technical training; and

(3) To investigate the means of making the whole field of Science, Letters and Art fully accessible to the workers.

RESOLUTION CONCERNING FACTORY INSPECTION

The Conference requests the Governing Body of the International Labour Office—in the spirit of the observations on the yearly reports of factory inspectors contained in the Director's Report to the present Session (pp. 182-183)—to organize an exchange of views between the Governments of the more important industrial countries among the States Members on the possibility of agreeing year by year on one or two special questions affecting the protection of the workers to which factory inspectors would be required to pay special attention in the ordinary course of their duties, and with which they would have to deal in greater detail in their yearly reports, so that the International Labour Office could co-ordinate and publish the information thus obtained.

The Governing Body is requested to report to the next Session of the Conference on the results of the action taken in accordance with the above suggestion, and to make any proposals which it thinks fit for giving practical effect to it.

RESOLUTION CONCERNING ANNUAL HOLIDAYS WITH PAY

Whereas the institution of annual holidays with pay is important for the welfare of the workers;

Whereas it appears from the studies of the International Labour Office that in most industrial countries a large number of workers are at present entitled to an annual holiday with pay, whether by law, collective agreement, or custom; and

Whereas international uniformity in hours of work would be suitably supplemented by rapidly establishing uniformity in the right to annual holidays;

The Conference requests the Governing Body to consider the possibility of placing the question of annual holidays with pay for the workers on the Agenda of an early Session of the Conference.

RESOLUTION CONCERNING FREEDOM OF ASSOCIATION

Whereas freedom of association is a fundamental right of workers guaranteed by the Treaty of Peace;

Whereas, in spite of the efforts made previously, the attempt to regulate the matter of enforcement of this fundamental principle with the effective means of an international Convention has failed;

Whereas, owing to this failure, the most elementary right of workers to organize and to act together for the defence of their rights is hampered; and

Whereas the present situation is calculated to engender unrest in important industrial communities;

The Conference requests the Governing Body to consider the possibility of placing the question of freedom of association on the Agenda of an early Session of the Conference.

Annual Report of the Director of the International Labour Office

The annual report of Mr. Albert Thomas, Director of the International Labour Office, was presented at the Fourteenth Conference. The report is in two substantial volumes.

Volume I deals in two sections with the general activity of the International Labour Organization. Section 1 is devoted to the general working of the Organization, and deals with questions of organization, international information, and relations. Section 2 reviews the results obtained, and comprises the following seven subdivisions: Working conditions; Social insurance; Wages; Possibilities of employment; Protection of special classes of workers; Workers' living conditions; and workers' general rights.

Volume II contains a summary of the annual reports furnished by the Governments under Article 408 of the Treaty of Versailles on the measures taken by them to give effect to Conventions to which they are parties.

General Activity of the Organization

The following is the list of the States Members: Albania; Argentina; Australia; Austria; Belgium; Bolivia; Brazil; British Empire; Bulgaria; Canada; Chile; China; Colombia; Cuba; Czecho-slovakia; Denmark; Dominican Republic; Estonia; Ethiopia; Finland; France; Germany; Greece; Guatemala; Haiti; Honduras; Hungary; India; Irish Free State; Italy; Japan; Latvia; Liberia; Lithuania; Luxemburg; Netherlands; New Zealand; Nicaragua; Norway; Panama; Paraguay; Persia; Peru; Poland; Portugal; Rumania; Salvador; Siam; South Africa; Spain; Sweden; Switzerland; Uruguay; Venezuela; Yugoslavia.

It was stated in last year's report that Brazil had decided to retain its membership of the International Labour Organization in spite of its withdrawal from the League of Nations. In accordance with this decision, Brazil took a full part in the work of the Organization during 1929.

In the course of an outline of the Office's relations to the State members the report discusses certain developments of the past year that were calculated to promote the work of general co-operation. In the first place, special sections or services for international relations were created in the different countries either in the Ministries of Foreign Affairs for all the Geneva institutions, or in the Ministries of Labour for the International Labour Organization by itself. Every year, with the development of international life, it is stated, existing services find their activities increasing, and new services are created. Then there are the special bodies, inter-departmental or other committees, which have been set up to co-ordinate the relations of different departments with the International Labour Office. Further, there are the permanent delegations which different states have established in Geneva. These were maintained in 1929.

The Pacific Ocean States.—In this connection the report refers to the "Pan-American" conference and the Pan-Pacific Union. In regard to the latter it is pointed out that the countries of the Pacific are working intensively in the direction of labour legislation.

"Australia and New Zealand have systems of labour legislation which are among the most advanced in the world. Japan has rapidly built up a scheme of labour legislation which is very largely in accordance with the provisions of the international labour conventions. The labour laws of Soviet Russia are abundant and inspired by a desire to secure good conditions for the workers. China, after many difficulties and some attempts to take action in accordance with the proposals of the International Labour Conference, is preparing to put into force a far-reaching and advanced Labour Code. On the American continent, too, it should be pointed out that in the United States and Canada, where labour legislation is a matter for the States or Provinces, those on the Pacific Coast are among the foremost in their respective countries in the matter. And in Latin-America it is a Pacific State, Chile, which has been in the van in the ratification of international labour Conventions.

"These developments have provided considerable justification for this somewhat unexpected movement of opinion and interest, which to some minds might appear artificial.

"What form will it take in the future? Will the Office be asked to organize an official demonstration of its activities in the Pacific area? Will the idea of a consultative conference take birth in that area also? If so, how will the more purely Asiatic movement be reconciled with this Pacific movement? How will the different regional understandings be defined. All these problems may be premature, but they do not detract from the fact that, in studying and sympathetically following movements of this kind, the Office can only find opportunities for fresh progress, as indeed was shown by its participation in the Kyoto Congress."

United States.—In regard to the non-participation of the United States in the Organiza-

tion, the Director makes the following statement:—

"During the ten years of its existence the International Labour Organization has undoubtedly done good practical work in international legislation, not to mention its other activities, without the participation of the United States. But when the Office endeavours to secure ratification of its international labour Conventions by the States of Europe, Asia or South America or to overcome the opposition of employers preoccupied by the fear of foreign competition, it is constantly being told that all its efforts are negatived by the fact that the most powerful industrial country in the world not only cannot subscribe to any of its Conventions, but does not even interest itself in its work. The difficulties of the Office's position are, indeed, being aggravated by the fact that during the last few years employers in a considerable number of countries have been seriously concerned by what they are sometimes apt to call American economic imperialism. Surely there are some grounds for thinking that, if some representatives or observers from the United States were to meet some European employers and workers in conference, whether officially or unofficially at a session of the International Labour Conference or otherwise, in an endeavour to ascertain in all sincerity and objectivity what might be the real consequences of their economic policy on the labour conditions of the rest of the world, many prejudices might be dispelled, many possibly unfounded apprehensions allayed, and perhaps a clearer idea obtained in their own interest of the possible repercussions and reactions on their own country. Surely it is not impossible that a more serene atmosphere would be created by such a meeting.

However, the Director proceeds to state that "in any case there is one indication which appears to warrant some hope for closer relationship between the Office and the American labour movement, i.e. the increasing recognition of the fundamental identity of the industrial problems confronting Europe and the United States. There also appears to be a growing tendency in the United States to see in State intervention the best means of meeting the hazards of industrial life and a growing belief in the need of labour legislation, as is exemplified by the change of attitude on the part of the American Federation of Labour towards the question of old age pensions. At the same time, there appears to be in Europe an increasing disposition on the part both of employers' and workers' organizations to seek the solution of some of their industrial difficulties—for instance in the matter of rationalization—in a policy of consultation and co-operation. Lastly, another feature from which some satisfaction may be derived is the action being taken by the World Peace Foundation and by the League of Nations Association of America, the latter of which has now appointed a representative at Geneva in the person of Mr. Felix Morley, with whom the office maintains close and cordial relations."

Russia.—The Director states, in reference to the relation of the Office to the Union of Socialist Soviet Republics, that the hopes expressed in his previous report for favourable development were not confirmed during the past year. "In spite of the fact that the Soviet Government continues to be represented at certain conferences, it would appear that Soviet policy during 1929 underwent an appreciable change in the other direction. The Third International has certainly reverted to its early ideas." For example, the Executive Bureau of the Red International of Trade Unions, at its meeting in Moscow in December last year, affirmed its resolution to support all workers' revolutionary organizations which recognize "the necessity of a class struggle and are working for the liberation of colonial peoples and opposing the reformist agencies of world imperialism, the International Labour office, the International Federation of Trade Unions, the American Federation of Labour" (*Trood,* 12 January, 1930). "This reappearance of the old ideas in favour of external isolation and hostility was in the main the outcome of the new orientation of the internal policy and the revival of the Communist policy."

One result of the new policy has been the discontinuance of collaboration, even in the scientific field, between Soviet institutions and the international institutions, or those of the "bourgeois and capitalist" countries, because such collaboration involves, according to the journal of the Commissariat, "the separation of science from politics" and a distinction "between the examination of the actual situation and Marxian analysis," which latter is considered to be "the only real scientific method." In regard to this policy of the Soviet government, the Director states that "as far as the Office is concerned, it continues to think that there is only one science, which is above classes and nations and is international, and that collaboration in the scientific field is always possible where there is a common desire to seek only for the truth. . . . . In any case, the Office will always be ready, either by exchanging its publications—and this still

continues—or exchanging information to serve the cause of truth, which is also the cause of peace."

Work of the Past Year

The next section of the report contains an outline of the work of the past year, and gives a summary of the organization of the International Labour Office, its finances, and its relations with the League of Nations. Summing up the situation at the end of 1929 the Director says:—

"On the one hand, no fresh progress was made during the year towards making the Organization a world-embracing institution. Neither in the direction of the United States nor in that of Russia, do circumstances seem propitious for the further development of existing relations. Previous relations, however, have at least been maintained, and the existing co-operation, embryonic as it is, continues as well as the exchanges of information. Is it too much to hope that the world will one day be knit together by closer bonds of mutual understanding and mutual aid?

"On the other hand, work in the international institutions goes on increasing and, it may almost be said becoming more complicated. Fresh problems are continually arising, and the Organization is constantly having to meet more clearly defined needs. Hence perhaps a tendency to greater complexity in the machinery and its working. It is the duty of the Office to be continually on the watch to see that the Organization properly responds to all the new requirements without losing itself in more formalism.

"But, however, much formalism has to be guarded against, the Organization cannot respond to the appeals made to it unless it is provided with adequate resources. It has been seen that one of the main preoccupations of the Office last year was just this fear that a too rigid budget might unduly tie its hands in carrying out its work."

Information Service

This section gives an account of the varied activities of the Office in fulfilling the task assigned to it by Part XIII of the Peace Treaty, namely the "collection and distribution of information on all subjects relating to the adjustment of conditions of industrial life and labour." Reference is made to the increase in the amount of scientific research work carried on during the past year. "The decisions taken by the Governing Body and the Conference in themselves demand a considerable amount of collection of information and research work. . . Moreover, the reports submitted to the Twelfth and Thirteenth Sessions of the Conference—on the prevention of industrial accidents, the protection of workers engaged in loading or unloading ships, forced labour, the hours of work of salaried employees, unemployment, the regulation of hours of work on board ship, the protection of seamen in case of sickness (including the treatment of seamen injured on board ship), the promotion of seamen's welfare in ports, the minimum requirement of professional capacity in the case of officers of the mercantile marine—together represent very extensive research work. It will also be observed that two at least of these reports show an extension of the scope of the Office's scientific activity; the report on the hours of work of salaried employees and the report on forced labour.

"With a view to the examination of the questions which the Governing Body might place on the Agenda of the 1931 (General) Session of the Conference, the Office had to prepare studies on the law and practice in different countries in regard to the minimum weight of loads, the age of admission of children to commercial employment, annual holidays with pay, and the institution of the four-shift system in glass works of the type known as automatic. The Office has also continued to compile and publish periodical comparative data on wages and the cost of living."

Studies were made also on the laws governing freedom of association, migration, insurance, industrial hygiene, safety, and vocational training; and on the subject of rationalization of industry.

The regular publications of the Office, in addition to the *Monthly Labour Review,* and the weekly *Industrial and Labour Information,* include the Legislative series; the International Survey of Legal Decisions on Labour Law; the Encyclopaedia of Industrial Hygiene; the International Labour Directory; and the "Studies and Reports" series, which deals with the principal labour topics. Summing up this branch of the work of the Office the Director says:

"The office is of course not unaware that its scientific work seems too slow to those who desire to see various social reforms rapidly brought about, and especially to the workers. It may also happen that some reforms are carried out without any reference to the stage reached in the scientific investigation of them. But once reforms have been obtained they can hardly be consolidated and developed without the help of science. And very often scientific preparation of subjects which at the time of their investigation are not planks in the immediate program of social reform may in

certain circumstances suddenly render fresh progress possible. Scientific work and action must thus be carried on *pari passu,* in some cases as parallel developments and in others in close interrelation.

"What the Office desires is to develop within and around itself the scientific spirit and a passion for science and the truth. Perhaps it is inevitable, having regard to its functions, that its investigations will always be confined to rather prosaic matters such as comparisons of figures or analyses of laws. But all this can be made of vital interest if the Office feels that in carrying it out it is serving a wide movement of public opinion and faith in social reform. The Office's work is not pure science, but applied science, and science applied to an object of inestimable value—social progress."

Examination of Results

The last chapter of Volume I of the Report gives an extended account of the position of the State members in reference to the subjects of past Draft Conventions and Recommendations. The General conclusions reached from this study are summarized in the concluding section of the Report. Dismissing the idea that the effectiveness of the Office can be measured by the number of ratifications the Director refers to "the movement of social progress that the International Labour Organization has aroused in every part of the world, and the healthy ferment of scientific research, legislative reform, and currents of opinion which it has created or guided or rendered more active and fruitful.

"Despite the stagnation of certain movements, a survey of the past year leaves little doubt but that the demand for social justice is becoming more urgent and more irresistible, more systematic and more international in practically every country and among all classes. A hundred signs of this have been noted in this Report: the fresh if slow progress made by workers' trade union movements, with its tendency to consolidate itself in spite of the vicissitudes of industrial life; the vigorous national and international activity of organizations of salaried employees of all shades of opinion; the development of agricultural groups which are getting into closer touch with the Office demanding a place in the Conference and forcing the doors of the Economic Committee; the growing consciousness in the co-operative movement of its international power; the attempts of handicraftsmen to organize themselves and put forward their claims, the social preoccupations of the churches, etc., etc. All this is reflected in new labour codes, important systems of social insurance, the spread of organizations for industrial relations, new conceptions of labour law and bilateral and multilateral labour treaties. . . . .

"As far as the Office is concerned, it will continue to ask its sovereign bodies, the Conference or the Governing Body, to take such measures as will make the Organization more and more capable as time goes on to respond by its studies, its machinery and its powers of control to the growing aspirations for social justice. It will draw on all the forces of imagination and enthusiasm at its disposal to prevent the Organization from being reduced to the state of an unwieldy lifeless body, and to ensure that all the big streams of social life flow towards it and give it increasing vitality and strength.

"Sometimes, when the Office has suggested that action should be taken in this direction, or when it has supported a request for the creation of new technical committees or new representative committees, on salaried employees, handicraftsmen, etc., some members of the Governing Body have expressed uneasiness. They have felt that the Office was dissipating its energy in too many different directions, while at the same time it complained of its inadequate resources. They felt that it ran the risk of losing in authority what it would gain in popularity. After ten years of experience the Office cannot take this view. It has lost nothing by trying to meet all the demands made upon it. Its committees and its consultations with experts have won for it the sympathy of numerous and extensive groups and have in no wise detracted from its scientific research. On the contrary, they have helped to guide its work and check its early conclusions. They have not led the Governing Body into any premature decisions. Sometimes even, by the influence of their resolutions, they have calmed impatient feelings and prevented misunderstandings.

"When simpler, more rapid and effective methods of international procedure enable the Office to respond to all the aspirations which is has studied and defined, then the hard and difficult period of its early struggles will be over. Supported by the confidence of important movements for the defence of the workers or for social ideals and provided with a more pliable technique, it will have less difficulty in obtaining the desired ratifications and will be able to carry out its mission to the full.

"One final condition, however, must be fulfilled. As has been observed in the conclusions to all previous Reports, and the observation holds good as much as ever to-day, the success of the Organization depends on its faith in social justice and its will to achieve it. Ten

years have passed, and the time has come for full and frank self-examination. Has there been too much facile acceptance of the limitations imposed by outside conditions? Has too much heed been paid to the frequent counsels of wisdom and prudence? Can it be said that the ideals set up by the nations in 1919 have not been too much lost sight of, and that the League of Nations as a whole and this Office in particular have really become what their creators intended? The Office can confidently say that it has done valuable work, but it is small in comparison with the ideals to which it owes its birth. Can it not be argued with some justification that, unconsciously and under new names, the old routine and the old ideas have gained the upper hand and that the international organizations have been inspired more by the rules of the old diplomacy than by the ideals of President Wilson? The regression may perhaps have been so great that critics may even object to any reference to the name of Wilson or to the ideals of the armistice period. We are rooted in the past and held in the grip of tradition, and the only method of escape from it into the new world glimpsed in 1919, the world of organization and justice, is by unremitting examination and testing of methods and procedure, by continuous adaptation of them to changing conditions, and by constantly holding up the results obtained to the mirror of the great ideal of world peace which is the life work of the generations which have known the war."

49th Session of Governing Body

The main question considered by the Governing Body of the International Labour Office at its 49th Session, which began on June 5, and was to conclude immediately after the close of the Fourteenth Conference, was that of the desirability or otherwise of initiating the procedure laid down for the revision of eight Conventions adopted by the International Labour Conference.

It may be explained that the six Conventions adopted at Washington in 1919, and two of those adopted at Genoa in 1920, will have been in force for ten years at varying dates in 1931.

The Director was authorized to put before the Governing Body in October proposals for re-organizing the correspondence Committee on Social Insurance. In this connection, Mr. Tom Moore (Canada) pointed out that as regards legislation and practice in the field of workmen's compensation, Canada was greatly in advance of European countries, and he asked the Director to include in his proposals the names of Canadian experts in this field.

By one of the standard clauses of these Conventions, the Governing Body is required at least once in ten years to present to the Conference a report on the working of each Convention, and to consider the question of its amendment. In accordance with the rules of procedure established by the Standing Orders of the Governing Body, the Office prepared for its information a draft report on the existing situation, from the point of view of legislation and practice, with regard to each of the eight Conventions enumerated. It was for the Governing Body to decide whether, in respect of any of them, it should put in motion the machinery for revision, or whether it should merely communicate the report, with such changes, as it might think fit, to the Conference.

On one of the Conventions—that relating to the employment of women during the night—the Governing Body had not pronounced when this report of the Session was received, the British Government having asked for the amendment of one of its clauses in order to allow the employment of women engineers in electrical stations. As regards the rest, however, it was decided that there was no need to contemplate revision, and that the reports should merely be communicated to the 1931 Session of the Conference.

In connection with the Convention concerning unemployment, a request was made by the German Government for the insertion of a clause relating to the abolition of fee-charging employment agencies. This, it will be remembered, was the subject of one of the Recommendations of the Washington Conference. The Governing Body took the view that the matter should be dealt with, if at all, by means of a new Convention, and instructed the Office to prepare a report on the present law and practice for consideration at its next session.

The position with regard to the Hours Convention was discussed at some length, a demand for its revision having been presented by the Swedish Government, which also called for changes in four other Conventions. The Governing Body was divided on the question, and a proposal was made to postpone decision. This, however, was rejected by a majority, and it was finally decided, by 14 votes to 7 with 2 abstentions, that there was no occasion to take steps for the amendment of the Convention. An end has thus been put to an uncertainty which has prevailed for some time past. The Hours Convention will continue to stand in the form in which it was adopted nearly eleven years ago.

Study of International "Real Wages"

The director of the International Labour Office, in his annual report to the Fourteenth Conference (outlined on another page of this issue) illustrated the increasing complexity of the work of the Office by referring to an investigation recently undertaken in response to a request by the Ford Motor Company. The study, it is claimed, will be the first comprehensive study of international "real wages." In May, 1929, the Ford Motor Company requested the International Labour Office to furnish information as to the minimum wage rates which that company would need to pay in the seventeen European cities where the Ford Company had, or contemplated having, automobile plants, in order that the employees in each of these cities might be able to maintain the same general standard of living as that of the company's employees in Detroit. The 17 cities for which information was desired were: Manchester, London, Cork, Paris, Marseilles, Berlin, Frankfort, Antwerp, Rotterdam, Helsingfors, Copenhagen, Stockholm, Trieste, Genoa, Barcelona, Warsaw, and Istanbul (Constantinople). The International Labour Office replied that a special inquiry would be necessary to obtain this information. The United States Bureau of Labour Statistics agreed, upon request, to make the basic survey in Detroit.

Workman's Budget at Detroit

The latter survey was made by the Bureau of Labour Statistics in the early part of 1930. Its purpose was to secure detailed data regarding the living conditions and expenses of a representative number of the Ford Motor Company's employees in Detroit who were maintaining a family on the company's minimum wage of $7 per day. The report gives the average cost of each item in the family budget, and the quantity purchased. The cost of a similar budget in each of the foreign cities may be obtained by pricing each of the quantity items, and totalling the results.

The results of the basic survey of conditions in Detroit are given in the *Monthly Labour Review*, June, 1930, in an article containing numerous tables. The average earnings of the husbands in the one hundred families canvassed was $1,694.63, and the average income from other sources was $17.24, making a total average income of $1,711.87. The average expenditures of the 100 families amounted to $1,719.83, leaving an average deficit for all the families of $7.96.

AVERAGE AMOUNT AND PER CENT OF EXPENDITURE FOR EACH GROUP OF ITEMS

Number of families. 100; average persons per family, 4.5; average equivalent adult males, 3.27; average income per family, $1,711.87.

Item	Average yearly expense	Per cent of yearly expense
Food	$ 556 12	32.3
Clothing of—		
Husband	63 59	3.7
Wife	59 21	3.4
Children	87 87	5.1
Total, clothing	210 67	12.2
Housing	388 81	22.6
Fuel and light	103 20	6.0
Furniture and house furnishings	88 55	5.2
Life insurance	59 16	3.4
Street-car and bus fares	37 40	2.2
Expenses of sickness	64 73	3.8
School expenses	6 41	0.4
Cleaning supplies	16 64	1.0
Barber	12 37	0.7
Miscellaneous expenses	175 77	10.2
Total expenses	$1,719 83	100.0

Tables are given showing the various items in this expenditure. Food is the most expensive item in the family budget of the wage earner, representing 32.3 per cent of his average expenditures for all purposes. The average outlay for clothing was 12.2 per cent of the total family expenditure. In regard to housing, 32 families were purchasing their homes, the others living in rented houses, apartments or flats, the cost of rented quarters averaging $391.47 a year. Details are given also of the expenditures on fuel and light, furniture, life insurance, street car and bus fares, sickness, school, barbering, and "miscellaneous," including optional items such as church expenses, gifts, entertainments, reading matter, tobacco, etc.

It is pointed out that in Detroit, the automobile is becoming more and more a part of the family equipment for recreation, 47 of the 100 families owning cars. Over a third of the number owned radio sets, and about half had electric washing machines and phonographs.

Articles were bought on the instalment plan by 59 of the 100 families included in this study. Thirty-five families were paying on purchases made in 1929; eleven families were paying instalments on articles bought in 1928 and 1929, ten on 1928 purchases only; one on 1927 purchases only; one on 1927 and 1929 purchases; one family was still paying on a living-room suite, a dining-room suite, and a phonograph

purchased in 1925. Furniture (in either suites or separate articles) and house furnishings are the commodities most frequently purchased on the instalment plan. Automobiles were the next most popular article bought on instalment, fourteen families having so purchased them; thirteen families were making instalment payments on washing machines.

International Federation of League of Nations Societies

The International Federation of League of Nations Societies held its 14th Plenary Congress at Geneva in June. One of the resolutions that were adopted declared that the Congress "considers that no effort should be spared to secure a general improvement in the standard of living through the activities of the International Labour Organization and to this end urgently calls upon affiliated societies to continue their efforts to induce the Governments of their respective countries to ratify international Labour Conventions and in particular to ensure at the earliest possible moment the ratification of the Washington Hours Convention; Welcomes the action of the Governing Body in placing on the agenda of the International Labour Conference the question of Hours of Work in the Coal Industry, and urges the Labour Conference, in view of the extent to which the Preparatory Technical Coal Conference afforded an opportunity for preliminary discussion of the subject, to arrive at an International Agreement at its Fourteenth Session.

Another resolution called on the League of Nations and upon the International Labour Organization to consider the expediency of convening a World Conference on Unemployment, in its industrial, economic and financial aspect.

Canada was represented at the Congress by Mr. Tom Moore, president of the Trades and Labour Congress.

Co-operative Milk Selling in U.S.A.

The progress made in the United States in recent years in the co-operative marketing of fluid milk is described in a recent report published by the United States Department of Agriculture (Technical Bulletin, No. 179). It is stated that fluid milk marketing associations marketed approximately two-fifths of the milk sold in the United States during 1928. This milk had a value of more than $325,000,000.

The rapid growth of co-operative milk-marketing associations began during the World War. Much of the time since 1920 has been spent in strengthening and perfecting the associations already organized. The object which the producers had in mind in forming most of the earlier co-operative-marketing associations was the retail distribution of milk. They felt that the distributor was getting more than his share of the consumer's dollar. By retailing the milk used for fluid consumption and processing the remainder they reasoned that they would not only receive the same wholesale price that they received under the private-distributor system but would obtain the distributors' share of the profits, which they believed to be exceptionally large.

The growth of co-operative fluid-milk marketing associations previous to the World War was slow. The first such association formed which is still in existence and reporting to the United States Department of Agriculture was formed in 1882. Only 4 such associations had been established before 1900. Three of those established from 1900 to 1910 are still operating; 7 of those established from 1910 to 1915; 57 of those established from 1915 to 1920; 76 of those established from 1920 to 1924; and 12 of those established from 1925 to 1928. Only 14 of the 159 active associations reporting to the Department of Agriculture were established prior to 1915; the larger growth in numbers came principally in the 10-year period from 1915 to 1925.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MAY, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on June 1, was 7,256, their employees numbering 1,021,951 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for May, was 1,679, having an aggregate membership of 198,595 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of June, 1930, as Reported by the Employers

Employment at the beginning of June showed a further pronounced gain, resulting in a more favourable situation than on June 1 of all other years on record with the single exception of 1929. Statements were tabulated by the Dominion Bureau of Statistics from 7,256 firms with 1,021,951 employees, as compared with 976,538 on May 1; this increase of 45,413 persons, or 4.7 per cent, brought the index number to 116.5 as compared with 111.4 in the preceding month and 122.2, 113.8, 107.2, 102.2, 95.6, 96.4, 98.5, 90.3 and 87.7 on June 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

Unusually large advances were registered in logging and construction, while transportation, manufacturing, trade, services, mining and communications also showed important increases. Employment in the service and trade groups was higher than at the same date of any other year on record.

Employment by Economic Areas

Expansion was noted in all of the five economic areas, firms in Quebec employing the greatest number of extra workers.

Maritime Provinces.—Further improvement was noted in the Maritime Provinces, according to statistics received from 561 employers with a combined working force of 82,333 persons, as compared with 76,029 on May 1. This gain was considerably greater than that reported on June 1 last year, when the index was some ten points lower. Manufacturing (particularly of lumber and fish products), logging and construction registered heightened activity, while transportation was seasonally slacker.

Quebec.—Construction, transportation, manufacturing and logging recorded pronounced increases in personnel, and smaller gains were shown in the service and trade groups; the gain in logging was due to river-drives. Employment was in slightly less volume than on the same date in 1929, but was higher than on June 1 in any of the preceding eight years, the index standing of 114.5, compared with 115.9 on June 1, 1929, and 110.7 on June 1, 1928, the previous maximum. Statements were tabulated from 1,698 firms employing 291,462 workers, or 21,574 more than in their last monthly report.

Ontario.—Employment in Ontario showed a further advance and the index, at 117.8 was higher than on June 1 in any other year of the record except 1929. The payrolls of the 3,200 co-operating establishments aggregated 422,369 employees, as against 414,853 on May 1. Construction registered the greatest expansion, but gains were also noted in logging, mining, transportation, communications and services. In manufacturing, considerable increase in the lumber, food, building material and some other groups were offset by losses in iron and steel, textile and pulp and paper factories.

Prairie Provinces.—Construction, especially railroad construction, transportation, services, trade, communications and manufacturing reported the most marked improvement in the Prairie Provinces, where the 1,055 firms whose statistics were tabulated employed 137,036 persons, as against 129,028 in the preceding month.

Larger increases were indicated on June 1, 1929, and the index then was many points higher; employment in these provinces continued to show the unfavourable effects of the tie-up in the disposal of the 1929 harvest.

British Columbia.—An aggregate payroll of 88,751 workers was registered by the 742 reporting employers, who had 86,740 at the beginning of May. Employment was in greater volume than in the early summer of any of the last ten years with the exception of June 1, 1929. Construction and manufacturing recorded the most noteworthy expansion on the date under review, while other groups showed little general change.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

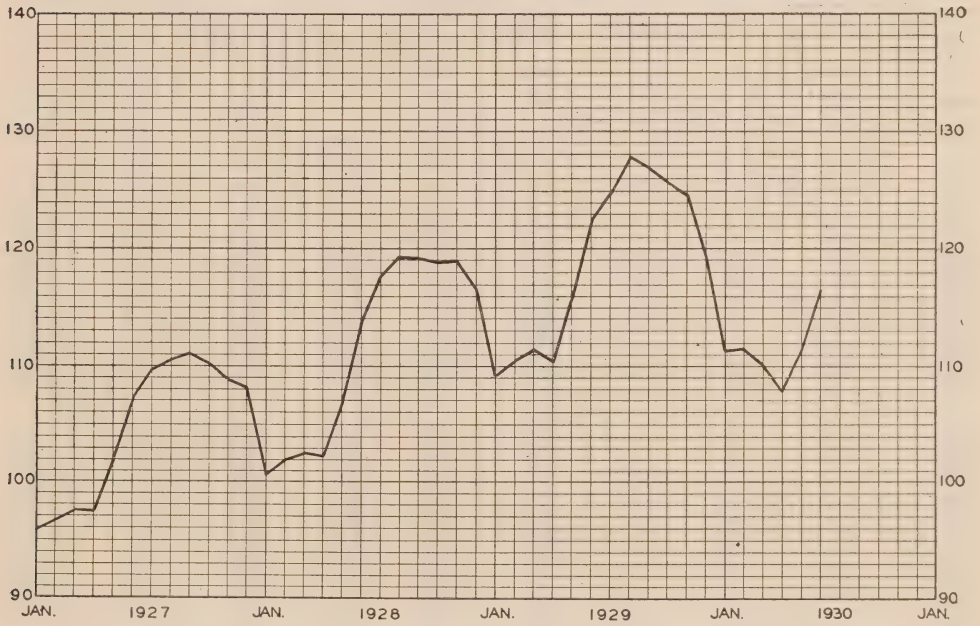

Table 1 gives index numbers of economic areas.

Employment by Cities

The trend of employment was upward in five of the eight cities for which separate compilations are made. Montreal, Quebec, Toronto, Ottawa and Winnipeg all showed considerable gains; declines were noted in Hamilton and in Windsor (including the adjacent Border Cities) while in Vancouver the situation was reported as unchanged.

Montreal.—Improvement on a large scale was recorded in Montreal, where the 916 co-operating firms employed 145,026 persons, an increase of 7,080 over their May 1 staffs. Transportation, construction, manufacturing and trade reported the greatest increases, but services were also busier. The index, at 116·6, was higher than in any other June on record with the exception of June, 1929.

Quebec.—Continued gains were registered in Quebec City, chiefly in manufacturing and construction. Statements were tabulated from 121 establishments having 12,531 workers, as against 11,887 in the preceding month. Considerable advances had also been indicated at the beginning of June of a year ago, when the index was fractionally lower. Employment on the date under review was in greater volume than on June 1 in any other year for which statistics are available.

Toronto.—Returns were furnished by 993 employers in Toronto with 125,934 persons on their payrolls, compared with 125,311 on May 1. Manufacturing, particularly of textile and iron and steel products, was slacker, but improvement was shown in construction, trade and transportation. The general gain was smaller than that noted on June 1, 1929, when the index was a few points higher; with this exception, however, the situation was

better than in the early summer of any previous year on record.

Ottawa.—Construction showed heightened activity in Ottawa, where employment was at a higher level than at the beginning of June of last year, when an increase had been recorded. A combined working force of 13,979 employees was indicated by the 145 co-operating firms; this was 549 more than in their last report.

Hamilton.—Further reductions in staffs were noted in Hamilton, where 218 employers reported 35,349 workers on their paylists, as compared with 35,562 at the beginning of May. Most of the decrease took place in manufacturing, notably in iron and steel plants, while construction was busier. Conditions were not so favourable as on the same date of a year ago, when a program of industrial expansion was being executed, but they were better than in the early summer of any other year for which data are compiled.

Windsor and the Adjacent Border Cities.—Following a period of seasonal activity, employment in the Border Cities showed a decline on June 1, when data were received from

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Districts as at June 1, 1930	100·0	8·1	28·5	41·3	13·4	8·7

139 firms with 18,433 employees, or 129 less than at the beginning of May. Most of the reduction took place in automobile factories, but construction was also slacker. Very much larger losses had been registered on June 1, 1929, but employment was then in greater volume, the index standing at 168·3, as compared with 149·4 on the date under review.

Winnipeg.—An aggregate working force of 32,351 persons was indicated by the 350 employers whose statistics were received, and who had had 31,884 employees on May 1. This gain involved a larger number of persons than that noted at the beginning of June of last year, but the index was then higher. Most of the advance recorded in June of the present year was in construction, manufacturing and communications, while trading establishments released some help.

Vancouver.—Manufacturing reported gains in Vancouver, but there were reductions in trade and some other industries, so that no general change was recorded in the city. Statements were tabulated from 284 employers with 29,769 workers in their employ. Improvement was indicated on June 1 a year ago, when the situation was practically the same as this year.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at June 1, 1930	14·2	1·2	12·3	1·4	3·5	1·8	3·2	2·9

Index numbers by cities are given in Table II.

Manufacturing

Statements were tabulated from 4,425 manufacturers employing 548,051 operatives, as compared with 541,928 in the preceding month. This increase was not so extensive as that reported on the same date in 1929 when the situation was generally more favourable, but with that exception, employment continued higher than in June of all other years for which data are available. Lumber mills registered the greatest gains, which were of a seasonal nature, while important advances were also made in the fish-preserving, vegetable food, building material, rubber, electric current, tobacco, mineral product, non-ferrous metal and some other industries. On the other hand, iron and steel, textile, and leather-using plants were slacker.

Animal Products, Edible.—There were further pronounced increases in the number employed in this group, particularly in the fish-preserving division in the Maritime Provinces and British Columbia. Statistics were tabulated from 224 firms employing 20,064 persons,

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Industries as at June 1, 1930	100·0	53·6	2·4	5·0	3·0	12·2	12·9	2·3	8·6

as compared with 18,173 in the preceding month. This increase was slightly more extensive than that reported on June 1, 1929, but the index was then a few points higher.

Leather and Products.—Employment in this group, chiefly in boot and shoe plants, showed a falling-off, which was larger than that indicated in the same month last year when the index was several points higher. The working forces of the 188 co-operating employers totalled 15,889 persons, as against 16,259 in the preceding month. The largest declines were in Quebec and Ontario.

Lumber and Products.—Continued seasonal expansion was noted in lumber mills and there were also gains in vehicle and other wood-using factories. Returns were compiled from 729 manufacturers in the lumber group having

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

55,948 employees, compared with 49,955 at the beginning of May. All provinces shared in the upward movement on June 1, the most marked advance taking place in Quebec and Ontario. Greater additions to staffs were made on the same date last year, when the index was considerably higher.

Musical Instruments.—There was a slightly upward movement in employment in musical instruments factories, 38 of which increased their payrolls from 1,860 persons at the beginning of May to 1,889 on June 1. A decline had been indicated on the same date last summer, but employment then was at a higher level.

Plant Products, Edible.—Large increases were noted in this group at the beginning of June, when 1,120 persons were added to the forces of the 382 co-operating manufacturers, who had 30,131 employees. Sugar and syrup, fruit and vegetable canning, biscuit and confectionery establishments reported most of the improvement, which occurred mainly in Quebec and Ontario. The increase registered on June 1, 1929, was somewhat smaller, and the situation then was not so favourable as on the date under review.

Pulp and Paper Products.—Practically no change was indicated in this group, gains in pulp and paper mills being largely offset by declines in printing and publishing. The index number stood at 110.9, compared with 111.8 at the beginning of June of last year, when considerable advances had been noted. An aggregate payroll of 66,559 workers was reported by the 544 establishments whose statistics were compiled, which had employed 66,477 in the preceding month.

Rubber Products.—Thirty-nine rubber factories recorded a combined working force of 15,104 persons, or 663 more than in their last return, most of the gain being in Quebec. Employment was in less volume than at the beginning of June a year ago, although the increase then indicated was on a smaller scale.

Textile Products.—There was a seasonal reduction in activity in textiles on the date under review, chiefly in woollen, knitting and clothing factories in Quebec and Ontario. Data were received from 685 firms employing 81,721 persons, as against 84,008 in the preceding month. This contraction involved a greater number of workers than that indicated on June 1, 1929, when the index was above its level at the time of writing.

Tobacco, Distilled and Malt Liquors.—Activity in this group showed a considerable increase, according to 144 employers whose staffs rose from 15,309 in the preceding month to 15,990 on the date under review. Tobacco factories in Quebec reported most of this advance, which greatly exceeded that shown on the same date last year. The index number then was slightly lower.

Chemicals and Allied Products.—Statements were tabulated from 126 plants in this division with 7,847 persons on their payrolls, as against 7,927 in the preceding month. The index number was higher than in the same month in any other of the years since 1920.

Clay, Glass and Stone Products.—Further marked improvement was shown in building material plants, 163 of which reported an aggregate working force of 13,534 persons, or 926 more than on May 1. The index stood at 130.3, compared with 131.3 on June 1, 1929, the maximum in the record of ten years. Ontario and the Prairie Provinces reported the bulk of the increase, in which all branches of the industry shared.

Electric Current.—A further advance was shown in electric current plants in which the index was slightly higher than in any other month since the series was commenced. The 94 co-operating companies increased their staffs by 882 workers to 16,872 at the beginning of June. Quebec recorded the greatest gain, but the tendency was generally upward.

Electrical Apparatus.—Decreased activity was shown in electrical appliance factories, 58 of which reduced their payrolls by 128 employees to 16,654 on the date under review. An increase had been recorded on June 1, 1929, but employment at the time of writing was at a higher level than on June 1 in any other year on record. Ontario firms registered practically all the decline.

Iron and Steel Products.—There was a further decrease in iron and steel works, mainly in automobile plants, although some other divisions also reported curtailment. Returns were tabulated from 694 manufacturers employing 148,952 persons, compared with 152,938 on May 1. Additions to staffs were noted in Quebec and British Columbia, but elsewhere the tendency was downward, particularly in Ontario. Losses were also registered on June 1, 1929, when the index was many points higher.

Non-ferrous Metal Products.—Smelters and refineries and manufacturers of aluminum products reported slightly greater activity, according to 107 firms employing 19,558 persons, compared with 19,425 at the beginning of May. This increase, which took place chiefly

in Ontario and British Columbia, was not so pronounced as that recorded at the beginning of June of a year ago, when employment was in considerably greater volume.

Mineral Products. Continued seasonal advances were noted generally in this group, in which they were of practically the same size as those indicated on June 1, 1929, when the index number was many points lower. An aggregated payroll of 14,343 persons was employed by the 82 co-operating firms, who had 14,120 in the preceding month.

Miscellaneous Manufacturing Industries.—The production of roofing materials and various other articles listed under this heading showed an increase, 137 workers having been added to the forces of the 75 manufacturers whose returns were tabulated, and who employed 4,532 at the beginning of May.

Logging

Employment in logging camps, chiefly owing to river-driving operations, showed an advance which was on a larger scale than on the same date in the preceding year. The index number, however, was then rather higher. Returns were received from 217 firms employing 23,965 persons, or 6,890 more than on May 1.

Mining

Coal.—Employment in the western coal fields was seasonally slacker, but improvement was reported in the Maritime Provinces; statements were compiled from a total of 81 operators with 25,477 employees, or 217 more than at the beginning of May. The index was a few points lower than on June 1, 1929, when declines had been recorded.
